of America and Canada by
D. REIDEL PUBLISHING COMPANY
DORDRECHT, HOLLAND

9 November 1976

The preparation of these volumes of *The Philosopher's Index* was made possible by a grant from the Research Tools Program of the National Endowment for the Humanities, an independent federal agency.

Preface

This Retrospective Edition of *The Philosopher's Index* includes original philosophy books published in the United States between 1940 and 1976, and articles published in philosophy journals in the United States between 1940 and 1966. The basic goal in preparing these volumes was to provide scholars with easy access to the scholarly documents that they most need. The specific policies followed in selecting journal articles and books for inclusion are listed under "Policies." Books and journal articles published in English outside of the United States will be included in a subsequent retrospective edition, which is scheduled for publication in early 1980.

These volumes would not have been possible without the cooperation and assistance of many. Special thanks must be given to the Research Tools Program of the National Endowment for the Humanities, which provided the funds necessary to collect, index, and keyboard the information contained in these volumes. Thanks is also extended to Bowling Green State University, which provided the required matching funds to make this project possible. Sincere thanks is extended to the *Bibliography of Philosophy* for allowing over 1,000 of their abstracts to be published in this retrospective edition without charge. Similarly, thanks is extended to *Philosophic Abstracts* and the following journals, which also allowed some of their abstracts to be printed in this retrospective edition without charge: *Ethics*, *Journal of Philosophy*, *The Monist*, *Philosophical Review*, *Philosophy of Science*, and the *Review of Metaphysics*. The Assistant Editors, who actually indexed the books and articles, deserve thanks for their willingness to devote their time to this project and for the high quality of their work. Thanks is extended to Vere Chappel and to the American Philosophical Association for their assistance in recruiting and selecting the editors. Thanks is also extended to all of the philosophers around the world who generously assisted in bringing this project to completion by sending in bibliographic information and abstracts to be included in these volumes. Finally, the production staff deserves due recognition for their excellent work in preparing these volumes.

Every effort has been made to provide complete and accurate information. Hundreds of hours literally were spent checking lists of philosophy books in an effort to include every book which satisfied the criteria set forth under "Policies." The indexing of the documents was done by trained editors and the indexing of each was checked by the staff of the Philosophy Documentation Center. The information keyboarded was proofed by those doing the keyboarding, by professional proofreaders, and by a series of computer programs which checked consistency. In spite of these efforts and more, I suspect that a few errors remain. If in the process of doing your research, you should find errors, please bring them to my attention so that they can be corrected in our permanent machine readable data base.

The Philosopher's Index

The Philosopher's Index, a publication of the Philosophy Documentation Center, is a subject and author index with abstracts. This special Retrospective Edition of *The Philosopher's Index* includes approximately 15,000 articles from U.S. journals published during the 27 year period, 1940-1966, and approximately 6,000 books published during the 37 year period, 1940-1976. Journals published since 1967 have been indexed in the regular editions of *The Philosopher's Index*.

Policies: The following factors were weighed in selecting journals to be included in this special Retrospective Edition: 1) the purpose of the journal, 2) the circulation, 3) recommendations from members of the philosophic community, and 4) publication in the United States during 1940-1966. Articles in interdisciplinary journals were indexed only if they were related to philosophy.

The following factors were weighed in selecting books to be included in this Retrospective Edition: 1) original and scholarly books in the area of philosophy and 2) books published in the United States between 1940 and 1976. The following classes of books were excluded: translations, new editions of earlier works, bibliographies, biographies, textbooks, collections of previously published works, dictionaries, encyclopedias, indices, lexicons, dissertations, privately printed books, books of readings, books written in languages other than English, and pamphlets.

Orders for this Retrospective Edition of *The Philosopher's Index* from the United States and Canada should be mailed to *The Philosopher's Index*, Bowling Green State University, Bowling Green, Ohio 43403. The price of the three volume set is \$195 (Individuals: \$130). ISBN 0-912632-09-7.

Subscriptions to the regular editions of *The Philosopher's Index* from the United States and Canada should be mailed to *The Philosopher's Index*, Bowling Green State University, Bowling Green, Ohio 43403. The annual subscription price (four numbers) is \$36 (Individuals: \$18). The price of single numbers, including back issues, is \$8. An annual cumulative edition of *The Philosopher's Index* is published in the Spring of each year. The price of this hardbound edition is \$45 (Individuals: \$22.50).

Orders from outside the United States and Canada should be forwarded to D. Reidel Publishing Company, Dordrecht, Holland.

Guidance on the Use of the Author Index With Abstracts

- A CRUCE, Theresia Benedicta.** Ways To Know God (translated By Rudolf Allers). *Thomist* 9,379-420 JI 46.
- AARON, Daniel.** Thorstein Veblen: Moralism And Rhetoric. *Antioch Rev* 7,381-390 S 47.
- AARSLEFF, Hans.** Leibniz On Locke On Language. *Amer Phil Quart* 1,165-188 JI 64.
- ABBAGNANO, Nicola.** Contemporary Science And Freedom. *Rev Metaph* 5,361-378 Mr 52.
- ABBAGNANO, Nicola.** Four Kinds Of Dialectics. *Phil Today* 2,143-149 Fall 58.
- ABBAGNANO, Nicola.** Intellectual Freedom. *J Phil* 48,356-361 My 51.
- The following questions, submitted by UNESCO for philosophers, are considered by the author: (1) Is there a legitimate distinction of quality or degree between the freedom of philosophers and that of other men? (2) In what measure is the philosopher's individual freedom conditioned by his philosophical activity? (3) Can a philosopher take a stand on a practical issue in concrete social problems without betraying himself as philosopher? (4) Can philosophy contribute to peace and understanding among men?
- ABBAGNANO, Nicola.** Outline Of A Philosophy Of Existence. *Phil Phenomenol Res* 9,200-211 D 48.
- ABBENHOUSE, Lester.** The Revolution In American Education. *Main Currents* 20,99-101 My-Je 64.
- ABE, Masao.** A Living-Dying Life. *Phil Forum (Pacific)* 3,96-102 My 65.
- ABEL, Darrel.** "Laurel Twined With Thorn": The Theme Of Melville's *Timoleon*. *Personalist* 41,330-340 Sum-JI 60.
- ABEL, Darrel.** The Theme Of Isolation In Hawthorne—Part I. *Personalist* 32,42-59 Wint-Ja 51.
- ABEL, Darrel.** The Theme Of Isolation In Hawthorne—Part II. *Personalist* 32,182-190 Spr-Apr 51.
- ABEL, F M.** The Places Of The Assumption. *Thomist* 14,109-117 Ja 51.
- ABEL, Reuben.** *The Pragmatic Humanism Of F C S Schiller*. NY King's Crown Pr 1955.
- The book includes chapters on the following: Logic and Psychology, Schiller's Critique of Formal Deductive Logic, Axioms and the Laws of Thought, Philosophy of Science, Problems of Inductive Logic, Evaluation of Schiller's Logic, The Making of Truth, Metaphysics and Psychology: The Making of Reality, Value Theory: Ethics and Religion, Freedom and Determinism, Psychological Research, Social Philosophy, Schiller's Contribution to Philosophy, and a Bibliography.
- ABEL, Reuben.** F C S Schiller And Pragmatism. *Personalist* 45,316-325 Sum-JI 64.
- Schiller (the English philosopher, not the German poet) expounded a version of pragmatism (or humanism) which is here compared and contrasted with the philosophies of William James, Charles S Peirce, and John Dewey.
- ABEL, Reuben.** Felix Kaufmann. *Salmagundi* 307-310 Wint 70.
- Felix Kaufmann was one of the German refugee intellectuals who successfully fused the European and American philosophical traditions. Having learned from both the Vienna Circle and Husserl, he discovered in Dewey's *Logic* a kindred spirit.
- ABEL, Reuben.** Pragmatism And The Outlook Of Modern Science. *Phil Phenomenol Res* 27,45-54 S 66.
- "I hope I have shown the unique pertinence of pragmatism to the characteristic outlook and problems of the world of modern science. In its theory of reality as constituted by the interaction of man and his environment, and in its view of truth as entailing human activity and inquiry, pragmatism provides a framework for understanding the concepts, constructs, facts, theories, and laws of science; for comprehending the status of geometry and logic; for dealing with determinism, induction, probability, and rationality; for a theory of meaning; and for an attitude of empiricist open-mindedness...."
- ABELL, Richard G.** Psychoanalysis As A Creative Process. *Humanitas* 1,243-250 Wint 66.
- ABELL, Walter.** Myth, Mind, And History. *J Aes Art Crit* 4,77-86 D 45.
- ABELL, Walter.** Toward A Unified Field In Aesthetics. *J Aes Art Crit* 10,191-216 Mr 52.
- ABELSON, Raziel.** A Reply To Evans's "Meaning And Use". *Phil Phenomenol Res* 22,262-263 D 61.
- ABELSON, Raziel.** In Defense Of Formal Logic. *Phil Phenomenol Res* 21,333-346 Mr 61.
- The author summarizes S Toulmin's main criticisms of logic, and then opposes them as being too extreme. Toulmin's thesis is that logic is not a theoretical science but a group of practical skills and its principals are not a priori laws but specific and context-bound rules for successful inferences. Abelson wants to compromise between the extreme empiricism of Toulmin and the extreme rationalism of professional logicians. It is concluded that one must find a middle ground between a purely formal logic that in itself has no practical value, and a practical, context-dependent logic that really isn't logic at all. Somewhere, pure logic and factual knowledge blend together into "practical logic" which is the province of both logic and empirical inquiry.
- ABELSON, Raziel.** Meaning, Use And Rules Of Use. *Phil Phenomenol Res* 18,48-58 S 57.
- ABELSON, Raziel.** Not Necessarily. *Phil Rev* 70,67-84 Ja 61.
- ABELSON, Raziel.** Persons, P-Predicates, And Robots. *Amer Phil Quart* 3,306-311 O 66.
- In his essay "On Persons," Strawson sought to escape the errors of both dualism and behaviorism by defining psychological concepts ("P-predicates") as predicates that are self-ascribable without observation and other-ascribable on the basis of "logically adequate behavioral criteria." A J Ayer, in his recent book, *The Concept of a Person*, claims that Strawson's definition impales itself on both horns of the dilemma it is designed to solve, for two main reasons: (1) A child brought up by robots would learn to ascribe P-predicates correctly to himself and incorrectly to his robot companions, so behavioral criteria cannot be logically adequate; and (2) If such criteria were logically adequate, then mental states would be reducible to bodily movements. This paper attempts to refute Ayer's arguments against Strawson and to shed some further light on the subtle logic of psychological discourse.
- ABELSON, Raziel.** Taylor's Fatal Fallacy. *Phil Rev* 72,93-96 Ja 63.
- ABERLE, D F And Others.** The Functional Prerequisites Of A Society. *Ethics* 60,100-111 Ja 50.
- ABIAN, Alexander** and Lamacchia, Samuel. Some Consequences Of The Axiom Of Power-set. *J Sym Log* 30,293-294 S 65.
- ABRUZZI, Adam.** Problems Of Inference In The Socio-Physical Sciences. *J Phil* 51,537-548 S 54.
- ACHINSTEIN, Peter (ed)** and Barker, Stephen (ed). *Legacy Of Logical Positivism: Studies In The Philosophy Of Science*. Baltimore Johns Hopkins Pr 1969.
- This book contains ten essays discussing the contributions of logical positivism to the philosophy of science. The articles are uniformly high grade and for the most part non-technical. The overall result is to place the positivist movement in a historical perspective both with respect to its positive contributions to the philosophy of science as well as with respect to questions whose importance became evident only as a result of the shortcomings of the positivistic analysis.
- ACHINSTEIN, Peter.** *Concepts Of Science: A Philosophical Analysis*. Baltimore Johns Hopkins Pr 1968.
- ACHINSTEIN, Peter.** "Defeasible" Problems. *J Phil* 62,629-632 N 65.
- ACHINSTEIN, Peter** and Barker, S F. On The New Riddle Of Induction. *Phil Rev* 69,511-522 O 60.
- ACHINSTEIN, Peter.** Confirmation Theory, Order, And Periodicity. *Phil Sci* 30,17-35 Ja 63.
- ACHINSTEIN, Peter.** Models, Analogies, And Theories. *Phil Sci* 31,328-350 O 64.
- ACHINSTEIN, Peter.** On The Meaning Of Scientific Terms. *J Phil* 61,497-508 S 64.
- A number of those who emphasize the "theory-laden" character of scientific concepts defend the following position: (1) A scientific term that occurs in a theory cannot be understood unless at least the basic principles of that theory are known and understood; (2) the meaning of such a term changes when the theory in which it occurs is modified or replaced with another. It is the aim of this paper to discuss the various factors that may be involved in understanding the meaning of a scientific term and to argue that many of these can be known independently of a theory in which the term occurs and may remain constant when that theory is modified or replaced.
- ACHINSTEIN, Peter.** Rudolf Carnap, I. *Rev Metaph* 19,517-549 Mr 66.
- Citing essays by Strawson, Goodman, Quine, Hempel, and others published in Paul A Schilpp's *The Philosophy Of Rudolf Carnap* (LaSalle, IL, 1963), and making note of Carnap's rejoinders, the author discusses four issues of central importance to Carnap's thought: the aims and methods of philosophy, analyticity and meaning, scientific theories and empirical significance, and probability and induction. His discussion of the aims and methods of philosophy centers on Carnap's ideas on explication, scientific and philosophical concepts, and linguistic frameworks, while his consideration of the empirical reference of scientific theories includes remarks on theoretical and observation terms.
- ACHINSTEIN, Peter.** Rudolf Carnap, II. *Rev Metaph* 19,758-779 Je 66.
- ACHINSTEIN, Peter.** The Problem Of Theoretical Terms. *Amer Phil Quart* 2,193-203 JI 65.
- Various philosophers have considered it important to distinguish two sorts of terms employed by scientists: *theoretical* and *non-theoretical*. Some base the distinction on a concept of "observability," others upon a notion of "conceptual organization" or "theory-dependence." My purpose is to examine these criteria and to argue that neither they, nor various related ones, generate the desired distinction. Rather each is capable of generating many different distinctions resulting in markedly different classifications of terms. This by no means precludes questions concerning the manner in which terms employed by scientists are tied to observation and to theories. Such questions, however, should not be raised upon observation or theories *in general*, but about particular kinds of observations and about terms in specific theories.
- ACHINSTEIN, Peter.** Variety And Analogy In Confirmation Theory. *Phil Sci* 30,207-221 JI 63.
- ACKERMANN, James S.** A Theory Of Style. *J Aes Art Crit* 20,227-238 Spr 62.
- ACKERMANN, Robert John.** *Belief And Knowledge*. Garden City NY Anchor Books 1972.
- ACKERMANN, Robert John.** *The Philosophy Of Karl Popper*. Amherst Univ Of Mass Pr 1976.
- This study aims at providing a critical account of the major outlines of Popper's philosophy. The opening chapter proffers an overview of Popper's conception of a scientific methodology. The second chapter is devoted to Popper's critique of verifiability as this principle was utilized within positivism, and to the concept of falsification. Chapter Three, "Popper Against Subjectivism," details the rather ambivalent attitude of Popper toward the debate between instrumentalism and

- realism. The fourth chapter provides a lucid account of Popper's theory of probability, beginning with the probability calculus, moving through his treatment of frequency and propensity interpretations, and ending with a discussion of the methodological rules of decidability. Chapter Five studies the triadic relation among verisimilitude, corroboration, and testing; and the following chapter, on inductive inference, summarizes Popper's critique of Carnap's theory of probability. The seventh and eighth chapters are devoted to indeterminism and Popper's interpretation of quantum mechanics. The closing chapter offers a brief synopsis of Popper's social theory.
- ACKERMANN, Robert.** *Introduction To Many-Valued Logics.* NY Dover 1967.
This book presents a brief account of some standard systems of many-valued logic. The presentation is not a highly technical one. There are no proofs that the reader must work through in order to understand the book, but the proofs of several theorems and meta-theorems are sketched. The book begins by discussing some difficulties about material implication, relating this to modal logic, and then relating modal logic to many-valued logic. The discussion of many-valued logic is limited to Łukasiewicz-Tarski systems, which have a single designated value, for "no interesting philosophical interpretations have been made of [alternative systems]."
- ACKERMANN, Robert.** A Neglected Proposal Concerning Simplicity. *Phil Sci* 30,228-235 JI 63.
- ACKERMANN, Robert** and Stenner, Alfred. A Corrected Model Of Explanation. *Phil Sci* 33,168-171 Je 66.
- ACKERMANN, Robert.** Deductive Scientific Explanation. *Phil Sci* 32,155-167 Ap 65.
- ACKERMANN, Robert.** Howard Kahane's Entrenchment Theory. *Phil Sci* 33,70-75 Mr 66.
- ACKERMANN, Robert.** Inductive Simplicity. *Phil Sci* 28,152-161 Ap 61.
- ACKERMANN, Robert.** Normative Explanation. *Phil Phenomenol Res* 24,522-529 Je 64.
In the *Logical Investigations*, Husserl explains our perception of external reality in the following way: he claims that we experience immanent sensations that are apprehended or animated by intentions, which objectivate them. In the lectures on time, Husserl tries to explain how both sensations and intentions are constituted for consciousness. The concept of an extended present instant, involving both protention and retention, is the key to his explanation; it allows him to say that we can retain in our present consciousness the elapsing sensation and intention, and thus be aware of them as immanent objects. In addition, Husserl identifies immanent temporality with intentions and sensations. As a result, he can no longer claim that they are really distinct from one another, for both are constituted out of the same element, inner time. Thus the distinction that serves as the basis for his analysis in the *Investigations* is suppressed by his conclusions in the lectures on time.
- ACKERMANN, Robert.** Some Remarks On Kyburg's Modest Proposal. *Phil Rev* 71,236-240 Ap 62.
In "A Modest Proposal Concerning Simplicity" (*Phil Rev*, 70, 392-393) Kyburg suggested that the complexity of a theory is measured by the number of quantifiers that occur in the set of statements of the theory. Ackermann argues that this supposed test of simplicity is unworkable. Kyburg's account allows redundant theories to count as equally simple as non-redundant theories. He considers possible revisions to Kyburg's proposal but finds several problems attending any purely syntactical notion of simplicity.
- ACKERMANN, Wilhelm.** Begründung Einer Strengen Implikation. *J Sym Log* 21,113-128 Je 56.

- ACKOFF, Russell L (ed)** and Wax, Muray (ed) and Churchman, C West (ed). *Measurement Of Consumer Interest.* Philadelphia Univ Of Penn Pr 1947.
This book is an attempt upon the part of a group of philosophers to put into practice what they have been preaching. It sets out to show that philosophy should immediately undertake an important role in science. It should act as a coordinator of research in the sense that it supplies general criteria for the adequacy of an experimental investigation. The new role of philosophy is that of a critique of experimental techniques; it attempts to define the most general conditions under which a procedure is said to be experimental, a process is said to be in experimental control, a question is said to have meaning.
- ACKOFF, Russell L.** An Educational Program For The Philosophy Of Science. *Phil Sci* 16,154-157 Ap 49.
- ACKOFF, Russell L** and Churchman, C West. An Experimental Measure Of Personality. *Phil Sci* 14,304-332 O 47.

- ACKOFF, Russell L** and Churchman, C West. Varieties Of Unification. *Phil Sci* 13,287-300 O 46.
- ACKOFF, Russell L.** Mr Rieser On Architecture. *Phil Rev* 56,690-694 N 47.
- ACKOFF, Russell L.** On A Science Of Ethics. *Phil Phenomenol Res* 9,663-672 Je 49.
- ACKOFF, Russell L.** Towards An Interpretation Of Contemporary Philosophy. *Phil Sci* 13,131-136 Ap 46.
- ACKRILL, J L.** Comments On Raphael Demos's "Plato's Philosophy Of Language". *J Phil* 61,610-612 O 64.
- ACKRILL, John.** Plato On False Belief: *Theaetetus* 187-200. *Monist* 50,383-402 JI 66.
The author offers the following interpretation of the *Theaetetus* discussion. (1) In the earlier sections Plato argues that there cannot be false beliefs correctly expressible in sentences like "Theaetetus is Theodorus" or "Beaty is ugliness"; for in each case knowing what the names stand for precludes the possibility of supposing them to stand for one and the same thing. (2) In the wax tablet section Plato gives an analysis of ordinary misidentification statements about people and things. They do not affirm the identity of two items referred to, but only that one item of experience belongs to the same continuant as another. (3) In the aviary section Plato tries to explain the possibility of purely intellectual error, but he fails. The principle that to understand an expression involves knowing what it stands for is ambiguous and misleading, but Plato does not make this clear.
- ACTON, H B.** Religion, Culture, And Class. *Ethics* 60,120-130 Ja 50.
- ADAMCZEWSKI, Zygmunt.** Time We Live In. *J Phil* 58,365-377 JI 61.
This paper offers a phenomenological treatment of time, attempting to cast light upon three problems: the temporal character of conscious existence, a possible duality of temporal notions, and simultaneity not spatial but only temporal. The author distinguishes the time of the world from the time we live in, and argues that the time we live in varies in "width," thus accommodating the span of what is consciously simultaneous.
- ADAMS, E M.** 'Ought' Again. *Phil Stud* 8,86-88 1957.
Professor Everett Hall in a previous article responded to the author's criticism of Hall's position on 'ought', charging, among other things, that the author's position cannot do justice to the objectivist's framework. The author responds that Hall, while rejecting the author's criticism, restates his own views in such a way as to express the author's very position, viz., we should think of 'ought' as analogous to a 'therefore' that indicates a synthetic or "natural" (rather than tautological) consequentiality. This kind of restatement subjects Hall's position to the same objections that he levels against the author's: (1) he confuses the logical and normative uses of 'ought', (2) he does not touch the central problem of the semantical involment of declaratives in normatives, (3) his analysis is not in accord with ordinary usage.

- ADAMS, E M.** Classical Moral Philosophy And Metaethics. *Ethics* 74,97-110 Ja 64.
Recent writers have begun not only to claim that moral philosophy is a normative discipline but also that metaethics is not what moral philosophy has traditionally been concerned with. But moral philosophy has always been concerned with the problems of metaethics, even though differences in style and method may conceal the fact. Metaethics is classical moral philosophy in a new mode, classical moral philosophy is not normative, and moral philosophy cannot provide us with any moral wisdom. These conclusions are established through the examination of the moral philosophies of Plato, Hobbes, Mill, and Bentham.

- ADAMS, E M.** Word-Magic And Logical Analysis In The Field Of Ethics. *J Phil* 47,313-318 My 50.
C L Stevenson's argument for the emotive theory of ethical terms is examined and the first premise, "The meaning of a word is the way in which it achieves the purpose for which it is used," is rejected. Stevenson's use of "meaning" is criticized and the author proposes the use of logical analysis as an effective means to free ethical language from "word magic."
- ADAMS, Elie Maynard.** *Ethical Naturalism And The Modern World-view.* Chapel Hill Univ Of N Car Pr 1960.
The naturalistic fallacy, properly understood, and the nature of ethical disagreement render classical ethical naturalism untenable. Emotive naturalism, furthermore, overlooks the "semantic dimension" of moral judgments, while logical naturalism fails "genuinely" to produce suppressed imperative premises or to explain away the apparently cognitive nature of the desires and attitudes which present imperatives. Hence, the author has been led by his critical study of naturalism to affirm non-naturalism in ethics. An interesting final chapter considers the metaphysical implications of naturalism vis-a-vis non-naturalism.
- ADAMS, Elie Maynard.** *Philosophy And The Modern Mind: A Philosophical Critique Of Modern Western Civilization.* Chapel Hill Univ Of N Car Pr 1975.
The gap between culture, its social structure and the structure of reality, especially the latter, is serious. The modern Western mind subjectivizes value and, science excepted, false but corrigible philosophic assumptions about the mind prevail.
- ADAMS, Ernest.** Elements Of A Theory Of Inexact Measurement. *Phil Sci* 32,205-228 JI 65.

ADAMS, Fred Winslow. From An Old Notebook. *Personalist* 34,372-379 Autumn-O 53.

After an introduction discussing Borden P Bowne's interest in the history of philosophy, this article incorporates Bowne's observations on Greek philosophy as set forth in some of his classroom lectures. The source was an old notebook of dictated lectures carefully transcribed in 1892 by one of Bowne's students, F W Adams.

ADAMS, George Plimpton. *Man And Metaphysics.* NY Columbia Univ Pr 1948.

This volume views human experience as the "accessibility" of nature to man. The book traces the interaction of two perspectives in the history of philosophy and sums up the analysis in the formulation of two alternative philosophies of this mind-nature relation.

ADAMS, Robert Merrihew. "A Modified Divine Command Theory Of Ethical Wrongness" in *Religion And Morality*, G Outka And J Reeder, Jr (eds), 318-347. Garden City NY Doubleday Anchor 1973.

The modification proposed here in divine command meta-ethics is that assertions of ethical rightness and wrongness, defined in terms of God's commands, are to be understood as presupposing certain beliefs about God's love for his human creatures. This is to avoid the conclusion that it would be wrong to disobey commands of a cruel God. With this modification a divine command analysis of theistic believers' use of "wrong" is defended. Among the problems discussed are those of reconciling the analysis with the ascription of moral qualities to God, and of understanding the relation between the moral discourse of believers and that of non-believers.

ADAMS, Robert Merrihew. "Where Do Our Ideas Come From—Descartes Vs Locke" in *Innate Ideas*, Stephen P Stich (ed), 71-87. Berkeley Univ Of Calif Pr 1975.

I try first to explain the sense in which Aristotelian scholastic empiricism held that all our ideas are derived from experience. I point out that Locke only partly revived Aristotelian empiricism, which had been rejected by Descartes. In particular he revived it minus its explanatory force. The main disagreement I discuss between Locke and Descartes is that Locke held, and Descartes was committed to deny, that all our ideas either are, or are composed of, ideas of properties of bodies that we have experienced in sensation, or ideas of mental operations we have experienced in ourselves. I argue, finally, that Locke's view on this issue provides at most a very weak basis for the empiricist ontological parsimony it has been thought to support.

ADAMS, Robert P. *The Better Part Of Valor: More, Erasmus, Colet, And Vives On Humanism, War, And Peace, 1496-1535.* Seattle Univ Of Wash Pr 1962.

A year-by-year history of the efforts by this group of Renaissance humanists to establish the idea of a just peace as the reasonable and Christian state of man, and of their eventual tragic defeat by the ambitions of Henry VIII and Cardinal Wolsey, by the sectarian passions of Protestantism, and by the Turkish invasions. The roles of their writings and their diplomacy are woven into this narrative, with More's *Utopia* most extensively analyzed.

ADDIS, Laird. *The Logic Of Society: A Philosophical Study.* Minneapolis 1975.

ADDIS, Laird and Lewis, Douglas. *Moore And Ryle: Two Ontologists.* Iowa City Univ Of Iowa 1965.

This book consists of two essays which, though not directly referring to each other, yet are both devoted to the same problem. For both Moore and Ryle proclaimed an ontology rejecting the existence of minds. In the first essay devoted to Ryle's book *The Concept of Mind*, Addis tries to refute Ryle's two crucial arguments against the existence of minds. Addis completes his study with an attempt to exhibit the two sources of Ryle's materialism: an inadequate ontology and an inability to solve the problem of intentionality. In the second essay D Lewis examines the realism of Moore. This position can be expressed in two statements: Material objects are substances (a), Material objects exist independently of our awareness of them (b). Lewis tries: (1) to make clear what Moore means by the terms "substance" and "independent," (2) to show that with these meanings both (a) and (b) are false. At the same time Lewis uncovers the mistakes of Moore's analyses in an attempt to illuminate the inadequacy of Moore's realism.

ADINARAYAN, S P. *The Human Mind.* NY Longmans Green 1950.

ADKINS, Nelson F. *Philip Freneau And The Cosmic Enigma: The Religious And Philosophical Speculations Of An American Poet.* NY New York Univ Pr 1949.

ADLER, Felix. *Our Part In This World, Interpretations.* NY King's Crown Pr 1946.

ADLER, Joshua. *Philosophy Of Judaism.* NY Philosophical Lib 1960.

The author describes his task as "the explanation of universal religion," in terms of "the unique Jewish experience." He relates this task directly to the sociocultural aspects of contemporary Judaism. Religion, in all of its diversified forms, deals with three basic problems. First, the specific theological problem of relating the supreme authority to the universe in general and to man in particular. The second problem concerns the relationship of one religious orientation to another, which necessarily involves the problem of the validity of religion. The third problem is that of "justifying religion in the modern world," that is, "the rapprochement between modern society and its interests and needs with the institutions of (my) religion." The author suggests a definition of the nature of religion. Religion gives the individual courage and a sense of importance regardless of his position in life. It also employs the over-abundant energies of man in some purposive activity.

ADLER, M J and Farrell, Walter. The Theory Of Democracy (Part I). *Thomist* 3,397-449 Jl 41.

ADLER, M J and Farrell, Walter. The Theory Of Democracy (Part II). *Thomist* 3,588-652 O 41.

ADLER, Mortimer J. *Poetry And Politics.* Pittsburgh Duquesne Univ Pr 1965.

ADLER, Mortimer J. *Some Questions About Language.* La Salle IL Open Court 1976.

The author proposes a philosophical theory of language. The posits of the author's theory are (1) the existence of mind as at least analytically distinct from the body; (2) the existence of two exclusive types of cognitive acts of the mind, viz, acts of apprehension and acts of judgment and reasoning; (3) the existence of the products of cognitive acts with subjective ideas as the products of apprehension; and (4) the intentional objects apprehended by subjective: ideas and whose intentional mode of existence is distinct both from that of ideas and that of things whose real existence is independent of mind. A number of related issues are also discussed, e.g., how a perceptual object is related to the really existing thing that causes our perception of that object, as well as some polemics against alternative philosophical theories of language.

ADLER, Mortimer J. *The Conditions Of Philosophy, Its Checkered Past, Its Present Disorder, And Its Future Promise.* NY Atheneum 1965.

Mortimer Adler is concerned by the steady retreat of philosophy in modern times in the face of the scientific challenge. He evaluates philosophy past and present and finds certain negative and positive features. Adler concludes that philosophical knowledge is of higher normative value than either science or technology.

ADLER, Mortimer J. *The Idea Of Freedom; A Dialectical Examination Of The Conceptions Of Freedom.* Garden City NY Doubleday 1958.

This book is a non-historical, non-partisan, comprehensive, explicative treatment of the idea of freedom as this idea has found expression in different Western philosophies over twenty-five centuries. The book consists of a discussion of dialectic and of the idea of freedom. Dialectic is conceived as the method for clarifying the issues in philosophic controversy. Controversy depends upon an area of agreement, and dialectic disentangles the agreements behind the controversy in order better to formulate the genuine issues of disagreement. The aim of the present work is mainly to show "the variety and extent of the agreements about freedom that exist among those who disagree on that subject." The discussion of the idea of freedom distinguishes three main conceptions of its nature defining distinct areas of agreement in which controversy is genuine. Finally, the author attempts to formulate the generic conception of freedom standing behind the three main positions.

AGASSI, Joseph. Faraday As A Natural Philosopher. Chicago Univ Of Chicago Pr 1971.

The author describes this book as a 'partial portrait' of Faraday. Faraday's role as the heretical theoretician in the scientific establishment is presented. In particular, his speculations that matter consists of fields of forces, and that fields of forces consist of polarizations of empty space, put him in opposition to various aspects of Newtonianism. 19th century problems in magnetism and electricity and their interpretation by Faraday are discussed with a detailed treatment of the interaction of Faraday's research and that of his contemporaries. Faraday's philosophy of science, his metaphysics, and his new candid style of scientific exposition are discussed.

AGUS, Jacob B. *Modern Philosophies Of Judaism, A Study Of Recent Jewish Philosophies Of Religion*. NY 1941.

This book's central aim is to expound the basic ideas of modern religious conceptions of God and his relation to man. The author deals with the following nineteenth century Jewish thinkers: A Geiger, S L Steinheim, S Hirsch and S Formstecher. The author's chief concern is with the modern trends in Jewish theology.

AGUS, Jacob Bernard. *The Vision And The Way: An Interpretation Of Jewish Ethics*. NY Ungar 1966.

ĀHALĀLĪĀ, Jasabirā Singha. *Marxism And Contemporary Reality*. NY Asia 1973.

There are three brief chapters on alternative metaphysical views of reality and time, and one on mechanistic elements in the orthodox Marxist conception of surplus value. A final chapter makes special reference to the Third World and India, criticizes several Marxist views of the practical dialectics of non-capitalist development, and advocates paths more in line with the "dialectical-historicist" philosophy, which allow for the "possibilities of pre-conceived changes."

AHERN, M B. *The Problem Of Evil*. NY Schocken Books 1971.

Does the existence of evil necessarily mean the non-existence of God? Analysis reveals three kinds of relevant problems: the general problem, the specific abstract problems, and the specific concrete problems. The general problem is non-factual and abstract, existing apart from specific cases of evil. This is an abstract question, not dependent on the existence of a specific evil. Of actual, concrete evils it can be asked. Examination of these problems concludes that the logical compatibility of evil and a wholly good, omnipotent being and the logical incompatibility of the two cannot be shown, nor can the conditions for compatibility and incompatibility be met.

AIKEN, Henry David. Evaluation And Obligation: Two Functions Of Judgments In The Language Of Conduct. *J Phil* 47,5-21 Ja 50.

The author criticizes contemporary ethical theorists for being preoccupied with definitions of words such as "good," "right," and "duty" along with using appeals to intuition or our "sense of language" to solve ethical problems. These approaches have led to trivialities which he proposes to dissolve through the analysis of the language of conduct in general. The author's analysis involves the division of judgments into judgments of evaluation or appraisal and judgments of obligation.

AL FĀRŪQI, Isma'il R. Science And Traditional Values In Islamic Society. *Zygon* 2,231-246 S 67.

- AL FĀRŪQI, Isma'il R.** The Self In Mu Tazilah Thought. *Int Phil Quart* 6,366-388 S 66.
At its formative stage, Islamic thought was given its rationalist orientation by the Mu'tazilah who laid down the groundwork of the Islamic digest of the intellectual and spiritual legacies of Hellas, Palestine and Persia. Basing themselves upon the ethical insights of Islam, they elaborated a metaphysic in which the nature and function of the self correspond to these insights. Their definition of the soul includes those of Stoicism, atomism, Plato, and Aristotle synthesized under Islam's principle of man's obligation and capacity to know and to realize the good. The soul's function is, in their view, manifold. But primarily, it is to know the moral law—a fact which implied for the soul a status metaphysically separate from the body, moral freedom as well as a system of rewards and punishments, anticipating the conclusions of Kant's critical philosophy.

- ALBERSHEIM, Gerhard.** The Scale Step. *Phil Phenomenol Res* 26,63-79 S 65.
"Tonal space" is structured by different scale systems whose steps are defined by the measuring rod of the consonant intervals octave, fifth, and major third. Thus, musical hearing, conditioned by age-old conventions, is preformed by our thinking in scale steps on which the communicability of musical meaning rests. Because of their distinctive musico-conceptual character we comprehend steps despite their varying intonation. The relative independence of our conception of scale steps from their actual pitch prevents the considerable deviations from just intonation by performers and by our tempered tuning system from interfering with our musical understanding. Accordingly, "absolute pitch" is not a memory for pitch simply, but for the accustomed intonation of scale steps, referred to by the tone names. Likewise, the step character accounts for what some psychologists call "chroma" and mistake for a property of single tones like pitch or timbre.

- ALBERT, Ethel M.** Conflict And Change In American Values: A Culture-Historical Approach. *Ethics* 74,19-33 O 63.
Contemporary America experiences much uncertainty about values. This uncertainty is the product both of the degree of cultural diversity and continual change. Many of the traditional values derived from Puritanism are still extant, particularly, among the elite, the ethic of economic success. But forces of change are: secularization, science, technology, and education. The traditional value of tolerance is tested against a greater heterogeneity than ever before. The typical western absolutism, which does not allow for legitimate diversity, is strong and must be overcome. Diversity seems to be inevitable and a good framework of values must recognize the fact.

- ALBRIGHT, William Foxwell.** *History, Archaeology, And Christian Humanism.* NY McGraw-Hill 1964.
This is the first in a series of volumes designed to bring together the author's contributions to a number of areas of research, and except for the first three chapters all the others have been previously published. In the new chapters the author discusses the following themes: (a) three types of humanism, with an emphasis on recent theistic humanism; (b) the expansion of historical horizons through innovation in historical methods and recent archaeological progress; (c) religion, and especially Christianity, history, and the biblical drama of salvation. The volume contains an autobiographical sketch and an appendix on the main chronological data of the author's career.

- ALDRICH, Virgil C.** *Philosophy Of Art.* Englewood Cliffs, NJ Prentice-Hall 1963.
This book manages to touch on most of the topics likely to be discussed in a first course in aesthetics, and would excellently supplement the readings in the anthologies most used in such courses. Read in connection with Rader's collection, for instance, it would give the student an interesting and unified insight into the materials scattered through the various essays. But this means that Aldrich's accomplishment has exceeded his design, and constitutes an original contribution to aesthetics; this is especially true of the discussion of "categorical aspects" and "aspection" and of "expressive portrayal."
- ALDRICH, Virgil C.** A Note On Visual Data In Esthetic Perspective. *J Phil* 39,661-663 N 42.
- ALDRICH, Virgil C.** A Point About Spaces. *Phil Phenomenol Res* 24,397-401 Mr 64.
It is argued that material things appear as either physical objects, (involving the logic of descriptive portrayal) or aesthetic objects, (involving the logic of expressive portrayal). A phenomenology of spaces is presented, showing how a thing appears differently in physical than in aesthetic space. It is claimed that the physical has no ontological priority over, and is not presupposed by, the aesthetic. There is much discussion on why one does not "frame" a physical object and conclusions are drawn about the function of a frame, (not to look beyond for meaning and value).
- ALDRICH, Virgil C.** An Aspect Theory Of Mind. *Phil Phenomenol Res* 26,313-326 Mr 66.
Older aspect theories of mind, such as the double aspect theory, are by-passed in favor of "aspect" in Wittgenstein's sense. What one perceives when one perceives someone's "state of consciousness"—his intention, his emotion, his pain—is comparable to what one perceives when one has an "aspect-experience" of, say, the duck-rabbit picture. This concept of perception of persons by persons is explored here, uncovering similarities and dissimilarities to the picture case. Seeing a person as a physical object in motion—not in "action"—is feasible though difficult because unnatural. This kind of "aspection" is called "categorical" and distinguished from other kinds. Even the human body is not naturally seen as a "physical object."

- ALDRICH, Virgil C.** Back To Aesthetic Experience. *J Aes Art Crit* 24,365-372 Spr 66.
- ALDRICH, Virgil C.** Behavior, Simulating And Nonsimulating. *J Phil* 63,453-456 S 66.
The main point is that a "mental state" may be "expressively portrayed" in a pattern of human behavior, whether the agent is simulating the state of consciousness or not. That is, the agent may make a *bona fide* exhibit of the state without it being the state that he is in. Ask any good actor who has played a part on stage. This is non-deceptive simulation. In the deceptive case, where "pretending"—not histrionic action—is going on, again the state is exhibited, but this time in a way and in circumstances that suggest the agent has, or is in, the state. Finding out whether the apparent state is the state the agent is in, is like finding out whether the apparent pink of the wall-paper is "the color" of the wall-paper. In a sense there are criteria for this, in another sense there aren't any and none is needed. The decision usually rests with perception.

- ALDRICH, Virgil C.** Do Linguistic Acts Make Me Tired? *Phil Stud* 15,40-43 1964.
The article goes into the nature of locutionary, illocutionary, and perlocutionary acts, accepting the common view that of these three kinds only the illocutionary acts are, strictly speaking, "linguistic acts." However, the author does take up some considerations that suggest that locution is basic and is perhaps the only real linguistic activity. He concludes that the way out may require adopting a concept of "linguistic act" accommodating enough to allow acceptance of both Aristotle's notion of intellectual activity and Watson's behavioristic view.

- ALDRICH, Virgil C.** Reflections On Ayer's Concept Of A Person. *J Phil* 62,111-128 Mr 65.
The essay begins by distinguishing "funsters" from "workers" in philosophy, putting Ayer among the former, and non-theoretical from theoretical modes of both description and interpretation, Sherlock Holmes using the former mode, this suggesting what "ordinary language" is. The main concern of the essay, however, is with the notions of "person," "human body," and "physical object." There is perplexity in Ayer's attempt to identify the person by the body "as a physical object," since (a) the latter concept logically excludes personal traits, and (b) the concept of a human body presupposes that of the person whose body it is. Thus Ayer fails to score against Strawson's thesis that "person" is primitive.

- ALEXANDER, Christopher.** *Notes On The Synthesis Of Form*. Cambridge Harvard Univ Pr 1964.
- This book describes the general nature of design problems in cultures where they are to be solved by designers through rational method. Its main purpose is to outline an application of set theory, which provides a general symbolic representation of design problems, enabling mechanically computed solutions through decomposing a set of design requirements into subsets of problems separately solvable. The tree of sets resulting from such decomposition provides a method for synthesizing the form which solves the design problem. An application of the method to the planned reorganization of an Indian agricultural village for its future development is presented in detail, and a mathematical appendix discusses the requirements for computer programs to carry out decomposition of hierarchical sets with associated graphs. As an application of mathematical logic to concrete problems, the book touches upon matters of interest to aestheticians, psychologists, cyberneticians, logicians and philosophers of science, as well as those engaged in planning and design.

- ALEXANDER, Hubert G.** Brandt On Hopi Ethics. *Rev Metaph* 9,106-111 S 55.
- ALEXANDER, Hubert Griggs.** *Time As Dimension And History*. Albuquerque Univ Of New Mex Pr 1945.
- The first chapter is followed by four largely historical chapters summarizing evidences of the struggle with duality. Chapter II considers relations of time concepts to basic human activities in primitive societies, implications of American Indian and Egyptian calenderic time-patterns, evidence from linguistic systems, religious and mythological contributions. Chapter III reviews Heraclitean and Permenidean doctrines, summarizes Platonic and Aristotelian treatments, and notes contributions of Peripatetics and Neoplatonists. Chapter IV includes sections on Sts Paul, Anselm, Augustine, and Thomas, on Galileo, Barrow, Newton, and Leibnitz, and on Descartes, British Empiricism, and Continental Rationalism. Chapter IV is accentuated by the idea of evolution in contrast to interests in exact science.
- ALEXANDER, Hubert.** Language In Culture. *Rev Metaph* 10,282-288 D 56.
- ALEXANDER, Ian W.** *Bergson, Philosopher Of Reflection*. NY Hillary House 1957.
- One of the Studies in Modern European Literature and Thought, this comprehensive study of Bergson attempts to remove a number of misunderstandings of his intuition. Alexander holds that "Bergson's, far from being a philosophy of instinct, is a philosophy of consciousness and reflection."
- ALEXANDER, Jerome.** *Life, Its Nature And Origin*. NY Reinhold 1948.
- ALEXANDER, Samuel.** *Space, Time And Deity*. NY Humanities Pr 1950.
- ALEXANDER, W M.** Johann Georg Hamann: Metacritic Of Kant. *J Hist Ideas* 27,137-144 Ja-Mr 66.
- The author analyzes what he perceives to be the central issue between Kant and Hamann: according to Hamann, Kant simply refurbishes the classical belief that the knowing subject is more certain of himself than of his experience. Hamann thinks that this also means that man is more certain of his own nature than he is of the acts of God's salvation in historical experience. Hamann's criticism of Kant is weighed and the author concludes that for Hamann, neither experience nor faith is transcendable in Kant's sense.

- ALKER, Henry A.** The Concept Of Mental Health. *Phil Phenomenol Res* 25,534-543 Je 65.
- The question is raised, as to what standards should be used in any decision about the scientific legitimacy of a given concept. Three standards are proposed: (1) ontological standard—basically free from inner inconsistency, (2) technical adequacy—a given concept is only as good as the scientific explanations it presupposes, and (3) that of nonmorality. The entire discussion is devoted to the concept of mental health.
- ALLAIRE, Edwin B.** Another Look At Bare Particulars. *Phil Stud* 16,16-20 1965.
- The article goes into Chappell's position that the "correct" solution to the "spurious" individuation problem does not require bare particulars. The author notes that Chappell tries to solve the individuation problem by making relations individuate. In objecting to this view he calls on an argument of Russell for support which holds that relation presuppose numerical difference, not account for it. He further argues that the belief that relations individuate derives from confusing numerical difference with qualitative difference.
- ALLAIRE, Edwin B.** Bare Particulars. *Phil Stud* 14,1-7 1963.
- The article goes into the problem of reconciling the Principle of Acquaintance with a theory of "bare particulars." The author goes into an analysis of what sort of entities individuals are, arguing that they are not rudimentary Aristotelian substances, but are the carriers of numerical difference. He holds that this view of individuals allows the singling out of bare particulars without using 'exist' philosophically, and thus avoids the dialectics of the nominalism-realism issue. He concludes that with this view one need not abandon the Principle of Acquaintance in order to maintain that we are presented with bare particulars.

- ALLEN, Diogenes.** Motives, Rationales And Religious Beliefs. *Amer Phil Quart* 3,111-127 Ap 66.
- This article is an attempt to present an original philosophical argument for the justification of religious beliefs. It argues that the cultivation and satisfaction of needs can awaken faith, and their continuing satisfaction be a sufficient ground for their affirmation as true. There are several important qualifications made in order for this thesis to stand, e.g., the types of needs which can and cannot serve as a sufficient ground, the need to rebut challenges to the truth of various religious beliefs (the main one examined is the challenge of evil). The entire case is argued in response to analytic philosophy and in its idiom. The article is an earlier and briefer statement of the core of the argument.
- ALLEN, Diogenes.** Where Are We Now In Philosophy? *Theology Today* 30,354-364 Ja 74.
- This is an examination of the current attitude and position of English-speaking philosophy toward religion. It is an attack on the indefensible limitations placed on philosophy by its practioners so that its discussion of subjects is often needlessly attenuated. This is argued especially concerning the concept of a person.
- ALLEN, Don Cameron.** *Doubt's Boundless Sea*. Baltimore Johns Hopkins Pr 1964.
- A problem to Renaissance thought was the prevalence, or supposed prevalence, of atheism, and therefore the necessity of exposing its errors and of producing arguments against it. This book surveys and summarizes the forms atheism took, the forms it was believed to take, and the varieties of counter-argument, chiefly in the 17th Century. The interest is in literary history; that is, in the books and pamphlets that were produced, and that stimulated others.

ALLEN, Gay Wilson. *William James: A Biography.* NY Viking Pr 1967.

Although this biography makes use of the papers of James' wife for the first time and sheds much light on James' fascinating personality, it in no way supersedes R B Perry's *Thought and Character of William James* as an account of James' intellectual life.

ALLEN, Glen O. *Cognitive And Conative Ethics: Two Approaches To Moral Theory.* Pocatello 1976.

Contemporary ethical theory has presupposed that the only alternative to cognitive ethics is ethical non-cognitivism. I propose a third possibility in conative ethics which holds that the data of ethics are not represented perceptions and cognitions but caused feelings and desires. Moral discrimination, then, is not the function of reason, the reflexive power of the cognitive faculty, but the function of conscience, the reflexive power of the conative faculty. I develop a theory of conative ethics showing its compatibility with the causal theory of human action, the primacy of moral agent theory, and the theory of ethics as moral methodology, and defend it as a meta-ethical theory against the competing theories of ethical non-cognitivism and ordinary language ethics.

The article develops a phenomenological view of the child from within the context of Husserl's phenomenological psychology.

ALLEN, Joseph L. The Relation Of Strategy And Morality. *Ethics* 73,167-178 Ap 63.

The recent interest of ethicists in problems of national military strategy has ignored the question of what concepts of strategy, morality, and their relations are really at issue. It is argued here that there is no inherent conflict between morality and strategy; strategy does not require immoral actions. Morality and strategy must each contribute to the other's endeavor. Morality must help the strategist understand man-in-society, increase his sensitivity, analyze strategic alternatives, and develop relevant material principles. Strategy offers ethics a place to test itself.

ALLEN, R E. The Argument From Opposites In *Republic V*. *Rev Metaph* 15,325-335 D 61.

To avoid denying the reality of the sensible world, Plato proposed in the *Republic* a theory of degrees of being: the objects of opinion are intermediate between full reality and complete unreality. This thesis is supported by a proof of the existence of Forms based upon an argument from opposites. The author examines Plato's argument, makes note of its relevance for the problem of self-predication, discusses the relationship between Forms and particulars, and argues that the theory of degrees of reality and the copy theory of participation are one theory reconciling the existence of the sensible world with Plato's criteria of reality.

ALLERS, Rudolf. *The Successful Error: A Critical Study Of Freudian Psychoanalysis.* NY Sheed & Ward 1940.

This is a critique of the theoretical foundations and scientific pretensions of Freudian psychoanalysis. The point of view of the critique is, however, philosophical rather than medical. After expounding the essential concepts involved in the psychoanalytic method, the author attempts to formulate the primary suppositions of "axioms"

constituting the theoretical basis of the method, and then proceeds to exhibit these as scientifically untenable by the criteria of empirical verification, of logical consistency, and of philosophical validity.

ALLERS, Rudolf. Heidegger On The Principle Of Sufficient Reason. *Phil Phenomenol Res* 20,365-373 Mr 60.

Heidegger's method is explored in relation to the "Being question," and the method of interpretation of language, linguistic analysis and etymological explanation is shown as having replaced phenomenology. Heidegger's thesis—that the mode in which Being becomes manifest in different periods of history, is illustrated with his thoughts on the principle of sufficient reason. That this principle lasted so many centuries of incubation until it was formulated by Leibniz, is a significant fact in the history of Being. It is concluded that there is no returning to Parmenides and the original intuition of Being; we must adopt a new approach, in order to render man again conscious of the primordial import of Being; otherwise we will be suffocated by the all-pervading technicalization.

ALLISON, Henry E. *Benedict De Spinoza.* Boston Twayne 1975.

This is an introduction to the thought of a great writer primarily directed not to the philosophical specialist, but to the student and general reader, made available by a well-known publisher of such works. Considered in turn are: Spinoza's life; his historical setting; his views on God, the human mind, freedom and morality, politics, and religion; and his historical significance.

ALLISON, Henry E. Locke's Theory Of Personal Identity: A Re-examination. *J Hist Ideas* 27,41-58 Ja-Mr 66.

The author's thesis is that although Locke's theory of personal identity is wrong, it merits more examination than has been given. Locke's theory must be considered within the framework Locke gave, i.e., a general analysis of the concept of identity, particularly that of thinking substance. Locke attempts to ground personal identity in consciousness or memory; this was soon attacked by such philosophers as Hume and Leibniz. Locke's main contribution consists of his separation of the concept of the unity of consciousness, which he equated with personal identity, from the metaphysical doctrine of the identity of an immaterial substance. This raised the issue of personal identity as a distinct philosophical problem for the first time.

ALLPORT, Floyd H. *Theories Of Perception And The Concept Of Structure.* NY Wiley 1955.

This is a review of the problems of perception and of the theories which have been put forward to deal with them. The author gives a full account of the classical theories, in which a case of sensation was given 'meaning' by a context of accompanying events. In all twelve theories are distinguished, and the experimental evidence on which they are based is described. Finally, after discussing the relevance of cybernetics to perception, the author summarizes the points of similarity and difference in all the theories and concludes with a generalized theory of structure which is intended as a conceptual framework in terms of which the points of agreement among psychologists can be more satisfactorily expressed, and by the use of which further research can be directed on points of difference.

- ALSTON, William P (ed).** *Religious Belief And Philosophical Reflection*. NY 1963.
- ALSTON, William P.** *Philosophy Of Language*. Englewood Cliffs NJ Prentice-Hall 1964.
- This book is a survey treatment of the philosophy of language considered from the orientation of "analytical philosophy." Treatment is given to various views concerning the meaning of words, criteria of meaningfulness, and dimensions or limits of meaning. A large part of this book will be concerned with the analysis of semantic concepts.

- ALSTON, William P.** Linguistic Acts. *Amer Phil Quart* 1,138-146 Ap 64.
- The notion of a 'linguistic act,' akin to Austin's 'illocutionary act,' is negatively characterized and shown to be philosophically important. After an investigation of 'taking responsibility for' the observance of rules, the author offers a tripartite analysis of a specific linguistic act. This analysis serves as a schema for that of any linguistic act; one merely substitutes other sets of rules for those specified in the first part of the given analysis. The difficulty in constructing a general definition of 'linguistic act' is exposed as one of specifying, generally and without circularity, what rules must be included in any such analysis.
- ALSTON, William P.** Ontological Commitments. *Phil Stud* 9,8-16 1958.
- This article considers the task of translating linguistic expressions, such as sentences of the form 'There are P's', to sentences of some other form. The author is especially concerned with the view that such translations enable us to avoid "ontological commitments." He takes an example from Morton White which allegedly provides a case of a translation which avoids ontological commitments and argues that if the translation is adequate then it is used to make the same assertion as the original and so makes the same commitments. He concludes that those who take avoidance of ontological commitment as the point of linguistic translations are obstructing our view of the real point of such translations.
- ALSTON, William P.** Particulars—Bare And Qualified. *Phil Phenomenal Res* 15,253-258 D 54.
- ALSTON, William P.** Philosophical Analysis And Structural Linguistics. *J Phil* 59,709-719 N 62.
- This paper takes an example of philosophical analysis, from Gilbert Ryle's *Concept of Mind*, which might seem quite similar to what contemporary linguists do, and attempts to answer the following questions: (1) What important differences, if any, are there between what Ryle says about 'see', 'know', etc., and what a linguist might say about them? (2) What similarities and differences are there between the data to which Ryle and the linguist appeal? The study concludes that the differences preclude any straightforward assimilation of the two enterprises but adds that the procedures and results of structural linguistics may nevertheless be of real value to the analytic philosopher.

- ALSTON, William P.** The Ontological Argument Revisited. *Phil Rev* 69,452-474 O 60.
- One standard objection to the ontological argument charges that the argument fails by mistakenly supposing that "exists" is a predicate. The author argues that the arguments traditionally given in support of the claim that "exists" is not a predicate are unsound in that they blur important distinctions between various modes of existence. New reasons are advanced for denying that "exists" is a predicate, based on the observation that the sorts of implications a subject-predicate statement has are a function of the kind of existence presupposed.
- ALSTON, William P.** Whitehead's Denial Of Simple Location. *J Phil* 48,713-720 N 51.
- "The fallacy of simple location," as first presented by Whitehead in *Science and the Modern World*, has been subject to many interpretations. This article seeks to elucidate Whitehead's intended meaning. The author concludes: A philosopher commits the fallacy of simple location if and only if he holds that, in whatever sense of spatio-temporal location is fundamental in his philosophy, a spatio-temporal entity can be located in one region of space-time.
- ALSTON, William P.** Ziff's Semantic Analysis. *J Phil* 59,5-20 Ja 62.
- Paul Ziff's book, *Semantic Analysis*, is a serious account of linguistic meaning, the main lines of which this paper attempts to trace out. Ziff's first major assumption is that "meaning is essentially a matter of nonsyntactic semantic regularity." It is conjectured that the main reason Ziff has made regularities central is that by analyzing the notion of meaning in terms of regularities, it would seem that we shall have shown the possibility of an empirical test of statements about what words mean. The paper expresses some doubts about this program and about the extent to which Ziff himself takes it seriously.

- AMATO, Joseph.** *Mounier And Maritain: A French Catholic Understanding Of The Modern World*. University Univ Of Alabama Pr 1975.
- The author introduces us to two leading French contemporary thinkers, Maritain and Mourier. Though chapters two and three deal with the education and mature thought of Maritain, the central focus of the book, however, is on Mourier. In chapters one and seven a sketch is given of Mourier's theory of personalism, while in chapters four through six his education, his encounters with other French intellectuals, and the publication of the magazine *Esprit* are described. This is an account of how two contemporary French thinkers disillusioned with such movements as positivism, materialism, individualism and collectivism found meaning in Christian faith. Against the background of contemporary French thought, political and philosophical, we see how two Catholic thinkers faced the issue of modernity and provided leadership to a generation of searching Catholic French intellectuals.

- AMBROSE, Alice.** Three Aspects Of Moore's Philosophy. *J Phil* 57,816-823 D 60.
- The author examines Moore's defense of common sense, his defense of ordinary language, and his clarification of concepts. She calls attention to two divergent interpretations of Moore's work: as opposing those theories about reality which go against common sense beliefs, and as opposing the linguistic correlates of such theories. The first interpretation, she claims, has eventuated in the resurgence of philosophical realism; the second, in meta-philosophical studies of philosophers' language.
- AMBROSE, Alice.** Wittgenstein On Some Questions In Foundations Of Mathematics. *J Phil* 52,197-213 Ap 55.
- AMENDOLA, Amedeo.** *Philosophical Scenario And Disquisitions*. Millburn NJ R F 1974.
- This is the preliminary articulation of the author's Philosophical or Lycean Futurism. The "Scenario" presents the framework for a reconstruction of the history of philosophy according to the aim at and success in true, coherent, and "proverse" (non-fallacious) discourse. The "First Disquisition" states the method for the systematic achievement of social justice, beyond communism and its antithesis. The "Second Disquisition" explores the "Age of Man" against the "Ages of the Gods and Heroes." The "Third Disquisition" deals with fallacies and the reduction of logic to semantics.

- AMES, Van Meter.** *Zen And American Thought*. Honolulu Univ Of Hawaii Pr 1962.
- Professor Ames points to some striking parallels between Zen Buddhism and American thinkers, such as Emerson, Thoreau, Whitman, Henry James the elder, William James, Peirce, Royce, Santayana, Dewey, and Mead. Common themes that he uncovers are: the joint emphasis upon the immediacy of pure experience, wholeness, the rejection of dualisms, the naturalistic framework, the quest for individual freedom and joyful happiness, and the testing of ideas "by their fruits." The current American interest in Zen is not an alien importation but something congenial (not without some reservations) to much within the tradition of American thought.

- ANDERSON, Alan R** and Moore, Omar K. Some Puzzling Aspects Of Social Interaction. *Rev Metaph* 15,409-433 Mr 62.
- After considering the differences between interactional models (games) and noninteractional models (puzzles), the authors argue that the attempt to apply the descriptive mathematical methods appropriate to the latter is out of place in the social sciences, and that a principal characteristic distinguishing group sociology from individual psychology is the concept of self-consciously formulating and following social rules.
- ANDERSON, Alan Ross (ed)** and Belnap, N D (ed). *Entailment: The Logic Of Relevance And Necessity*. Princeton NJ Princeton Univ Pr 1975.
- ANDERSON, Alan Ross (ed)** and Marcus, Ruth Barcan (ed) and Martin, Richard M (ed). *The Logical Enterprise*. New Haven Yale Univ Pr 1975.
- The paper's range, extending from mathematical logic through ontology, is indicative of both the breadth of Fitch's interests and of his influence on contemporary logical and analytical thought. Part One is on metaphysics and languages. The second part is devoted to combinatorial logic. Part three is on implication and consistency. The final part is devoted to nonstandard logics.
- ANDERSON, Alan Ross** and Belnap Jr, Nuel D. A Simple Treatment Of Truth Functions. *J Sym Log* 24,301-302 D 59.
- ANDERSON, Alan Ross** and Belnap Jr, Nuel D. Enthymemes. *J Phil* 58,713-722 N 61.
- Against the theses that material 'implication' is a kind of implication and that intuitionistic 'implication' is a relation of entailment, the authors argue that both views make hash of the distinction between logically valid arguments and strict enthymemes. The formal system E of entailment, on the other hand, as developed by the authors, does account for the differences among valid arguments, strict enthymemes, and intuitionistic enthymemes.

- ANDERSON, Alan Ross** and Moore, Omar Khayyam. The Structure Of Personality. *Rev Metaph* 16,212-236 D 62.
- The authors examine four autotelic folk-models, namely, puzzles, games of change, games of strategy, and aesthetic objects, in order to gain insights into the structure of human personality. They conclude that there are at least six functional parts to a fully developed human personality: a "date-tape," which processes information; four systems of perspectives, including those of agent, patient, social reciprocity, and umpire; and a system of emotions. In-coming information is, they maintain, routed through each perspective and checked against the emotional system.

- ANDERSON, Alan Ross.** On Professor Martin's Beliefs. *J Phil* 59,600-606 O 62.
- In this comment on R M Martin's paper (*Journal of Philosophy*, Volume 59, 1962): (1) sympathy is expressed with Martin's program, but (2) some questions are raised concerning the specific formal proposals of that program (most importantly, there is some doubt as to how one would go about formulating a semantical completeness property for a formal syntactical logic of belief), and (3) exception is taken to the requirement of extreme extensionalism imposed by Martin. With regard to this requirement, no reason is found for it, and it is argued that a satisfactory analysis requires more subtle and elaborate techniques than those allowed as "clear" by extreme extensionalists.

- ANDERSON, J M** and Johnstone, H W and Rosen, S H. *Essays In Philosophy*. University Park Penn State Univ Pr 1962.
- These ten essays are written in a sophisticated style, and range over problems in metaphysics, aesthetics, epistemology, and the philosophy of science. They bear out the authors' claim to be "united by nothing more than a sense of the importance and mission of a philosophy which assumes its total responsibilities" and an interest in the classical traditions of Western philosophy.
- ANDERSON, James F And Others.** Some Basic Propositions Concerning Metaphysical Analogy. *Rev Metaph* 5,465-472 Mr 52.
- ANDERSON, James F.** *Natural Theology: The Metaphysics Of God*. Milwaukee Bruce 1962.
- This is a textbook for that part of metaphysics which deals with the being of God. This work is for the use of students in Catholic colleges. Anderson treats the existence and nature of God in a traditionally Thomistic context. The five ways of demonstrating divine existence are supplemented by a discussion of other approaches, notably those of Jacques Maritain. Various divine attributes are explained in Part Two. Some extracts, in Latin and English, from Thomas Aquinas are included.
- ANDERSON, James F.** *The Bond Of Being: An Essay On Analogy And Existence*. St Louis Herder 1949.
- In his introduction the author cites as the problem of the book: "What sort of likeness is analogy, and what role, if any, does it have in philosophy? What role does it have in existence?" There is no treatise by St Thomas "De analogia," but the concept of analogy is implicit in his writings on similar questions and while he nowhere gave a formal philosophical analysis of the doctrine of analogy there is ample material even so from which the author of this book has been able to draw a philosophical interpretation of his thought in this regard. The author points to analogy as relevant in the solution of difficulties incident to the problem of being. This exploration of the concept of analogy is divided into four parts, analogy of inequality, analogy of proportion or attribution, symbolic analogy or analogy of metaphor, and analogy of proper proportionality.

- ANDERSON, John M.** *The Individual And The New World*. State College PA Bald Eagle Pr 1955.
- The chapters of this book, according to the author are "history interpreted in their terms of a conception of man's nature which is claimed to be a development of some elements in America." Meditations inspired by Emerson, Thoreau, Calhoun, Dewey and especially by Royce, lead him to the formulation of the idea of freedom in terms alleged to be uniquely American. "Man's nature is not attained once and for all, but again and again, hauntingly maintained in the eternal present. The meaning of the unknown, the New World, is to be found in that journey taken into it, a journey which discovers again and again that man's nature is to be reborn."
- ANDERSON, John M.** *The Realm Of Art*. University Park Penn State Univ Pr 1967.
- The main purpose of this book is to give a clear delineation of aesthetic intuition, its relation to the events that support and cushion it, and how it emerges as the culmination of these events. In closely reasoned chapters, the author offers a phenomenology of the creative experience and takes the position that art provides the key to the ultimate place of the human spirit. In unfolding his main thesis, the author displays the interpretive efficacy of his basic concepts through frequent and extensive illustrations from the plastic, visual and literary arts.
- ANDERSON, John M** and Johnstone, Henry W. *Natural Deduction, The Logical Basis Of Axiom Systems*. Belmont CA Wadsworth 1962.
- Based upon Gentzen's methods of natural deduction, this book sets up in Part One, the standard logic through identity and description theory, and in Part Two discusses the metatheory of this system. Chapter 2 presents the propositional rules, with four separate rules for negation to facilitate comparison with the intuitionistic logic; in addition, Chapter 3 introduces the method of truth tables and normal forms, and Chapter 4 takes a brief glance at multivalued, intuitionistic, and modal logics. Chapter 5 and 6 are devoted to the monadic and general predicate logics. Part Two begins with a consideration of axiom systems generally, then discusses the consistency and completeness of each of the logics, ending with the Lowenheim-Skolem theorem. The final two chapters present intuitive set theory and some of the divergent approaches to the paradoxes engendered.

- ANDERSON, Paul R.** *Platonism In The Midwest*. Philadelphia Temple Univ 1963.
- This book discusses a movement in philosophy during the 1870's, 1880's, and 1890's. The author centers on the thought and character of Hiram K Jones and Thomas M Johnson. Jones, a doctor in Jacksonville, Illinois, was the prime mover in the establishment of Plato Clubs in the region, and the founder of the American Akademie. The author examines Jones' published and manuscript writings and esteems Jones "... America's outstanding Platonic philosopher, teacher, and protagonist of his day...." He devotes his final chapter to an assessment of the causes for the decline of the movement.
- ANDERSON, Robert Fendel.** *Hume's First Principles*. Lincoln 1966.
- This book is an attempt to show that Hume has provided a system of metaphysics. In the course of his exposition, the author points to apparent ambiguities and inconsistencies in Hume's treatment of certain basic concepts of his philosophy, e.g., the concepts of perception, knowledge, and mind. An explanation of these inconsistencies is found at a "deeper level" in Hume's system, a level which the author approaches through an analysis of Hume's doctrine of matter.

- ANDERSON, Warren D.** *Ethos And Education In Greek Music*. Cambridge Harvard Univ Pr 1966.
- The author has attempted an exhaustive study of the place of music in the diverse facets of the cultural life of the Greeks during the classical period. Although aware of the difficulties that beset studies of this type on account of the loss of specimens of text and notation, the author centers his research on the significance and place of music among the determinants of the Greek ethos. Reference is made to performing, types of music, voice techniques, instruments and their development, rhythm, modality, harmony as well as the related arts in which music is employed. The belief that modes can qualify man's nature ethically is explored, but the main effort of this volume is to set forth the ethical doctrines stated or implied in the poetry and philosophy of the Hellenic period. How music was understood to have the double power of expressing and affecting the conduct of man, and its assessment as part of

- the Greek paideia, are gleaned from the works of Pindar, Aristophanes, Plato and Aristotle.
- ANDERSON, William Scovil.** *Anger In Juvenal And Seneca.* Berkeley Univ Of Calif Pr 1964.
- ANDERSON, William.** *Man's Quest For Political Knowledge: The Study And Teaching Of Politics In Ancient Times.* Minneapolis 1964.
- This is a history of the study of politics in the West, concentrating upon "the more important men that studied one or another aspect of politics" and attempting to show how the subject developed. Beginning with three chapters on Mesopotamia, Egypt and the Israelites, the book goes on to a discussion of Greek, Hellenistic and Roman political studies, terminating in the period around 600 AD. The author disclaims the intention to write "a complete history of political science," although he aims to show how the conception of such a science arose. A second volume is planned to continue the account to the present.

- ANGELL, Robert Cooley.** *Free Society And Moral Crisis.* Ann Arbor 1958.
- This book digests and analyzes what social science says about the processes and problems of moral order. "The... cornerstone of the structure [is] that a society has a set of common values influential in shaping its way of life." These values tend to be objectified in the moral web—in moral norms, institutions, and law. Societies strive to attain steady states. "Under modern conditions the transmission of the common values and moral norms of [a] society is not automatic." The study examines the conditions tending toward change, and the maintaining or regaining of a steady state, a state which in modern technological societies, at least, is not static. Relations of law to moral and societal problems, the rise and reorientation of deviant groups, "changes in conditions and the moral order," "the transmission of values and norms," "the maintenance of institutions," and "incompatibility in the moral order" are discussed. The goal of the study is to suggest how "a dynamic and democratic society [can] maintain a high level of moral integration in this twentieth century."

- ANSCOMBE, G E M.** Before And After. *Phil Rev* 73,3-24 Ja 64.
- Anscombe sketches the logical properties of the temporal relations before and after. These are not converse relations: "before" is transitive and asymmetrical, and "after" is neither. She discusses events as the terms of the relations before and after, events referred to by nouns and by clauses, and the logic of before and after with instantaneous events.
- ANSCOMBE, G E M.** The New Theory Of Forms. *Monist* 50,403-420 Jl 66.
- In the relatively naive early theory of Forms, Plato uses unreflectively such words as "one," "being," "whole," "same," "other"; when he came to reflect on these words and to treat them as signifying Forms, he encountered many difficulties—especially in view of his principle of "self-predication," that the Form (being) is itself. An attempt is here made to delineate the "new" theory involved in the *Sophist* and *Parmenides*, in two main aspects: participation of one Form in another, and negation and incompatibility. A constructable model for these relations of Forms is described.
- ANSCOMBE, G E M.** The Two Kinds Of Error In Action. *J Phil* 60,393-400 Jl 63.
- The paper raises a difficulty embedded in the rationale of exoneration in those cases in which the grounds for exoneration are ignorance of law or moral principle, in contrast to ignorance of fact. It concludes that the two rationales are indeed the same but that the first is more complicated because of: (1) the fact that anything that proves that under such and such a description what took place was not the subject's

- voluntary action will affect what can be imputed to him, and (2) the fact that imputability of some actions, like murder, are built into the meanings of their names.
- ANSHEN, Ruth Nanda (ed).** *Freedom: Its Meaning.* NY Harcourt Brace 1940.
- R N Anshen, who has "planned and edited" this book presents her own conception of the meaning and the task of freedom in a short introduction as well as in the headlines of the five parts into which the book is divided: freedom invades history, freedom for the mind, freedom in body politic, the cultural pattern of freedom, and the essence of freedom.

- ANTHONY, H Sylvia.** *Mercurius Politicus Under Milton.* *J Hist Ideas* 27,593-609 O-D 66.
- The question reopened here is whether Milton contributed to the Commonwealth-Protectorate journal "Mercurius Politicus." The views of earlier scholars are reviewed, and the author evaluates the significance of the role of Marchamont Nedham at the journal. Various articles from the journal are surveyed with an eye for possible Miltonian perspective. The author concludes that Milton may well have influenced Nedham's work on the journal, though the evidence is not completely firm.
- ANTOLIN, Viktor.** On The Ethics Of Communism. *Phil Today* 1,106-108 Je 57.
- ANTON, John P (ed)** and Plochmann, George K (ed). *Science, Philosophy And Our Educational Tasks.* Buffalo 1966.
- The relation between the teaching of science and philosophy is discussed. The main theme connecting these essays, given as symposium papers on the "Teaching of Philosophy," is an effort to view science and philosophy both as methods and outcomes of the employment of reason. The papers explore different aspects of the relationship between the organization and presentation of philosophy in American higher education in the light of the central role of science and the changes it has effected on the conception of the substance of philosophy.
- ANTON, John P (ed)** and Walton, Craig (ed). *Philosophy And The Civilizing Arts: Essays Presented To Herbert W Schneider.* Athens Ohio Univ Pr 1974.
- Following the editorial preface and a brief autobiographical sketch of Schneider, the third section offers four essays in ancient philosophy. There follows a section of studies in social theory. The closing section of essays are by Professor Schneider.
- ANTON, John P.** *Aristotle's Theory Of Contrariety.* NY Humanities Pr 1957.
- This is an analysis of the various contexts in which the idea of "contraries" is used by Aristotle. The author examines in detail the relation of the contraries (especially "form-privation") to metaphysics; then to physics (the doctrine of elements), to logic and dialectics, to the theory of categories, to psychology, ethics, etc. He pays particular attention to the processes which Aristotle distinguishes and to the correlation between unity and contrariety in the context of the sciences of processes. The work is fully annotated and supplied with a bibliography.
- ANTON, John Peter (ed)** and Kustas, G L (ed). *Essays In Ancient Greek Philosophy.* Albany NY SUNY Pr 1971.
- ANTON, John Peter.** *Naturalism And Historical Understanding.* Albany NY 1967.
- ANTON, John P.** John Dewey And Ancient Philosophies. *Phil Phenomenol Res* 25,477-499 Je 65.
- Three aspects of Dewey's relationship to Greek philosophy are discussed: the polemical, which refers to his earlier rejection of the classical tradition as being incurably dualistic; the historico-critical, which focuses on his cultural relativism as the context for his more judicious assessment of philosophical movements; and the cumulative, which examines certain central features Dewey shared with Plato and Aristotle and extended significantly. Dewey's development in approaching the Greeks is examined and his oversimplifications and assumptions exposed. Dewey acknowledged a deep affinity to Plato while for Aristotle he showed marked reprobation. The main reason for Dewey's limited insights into Greek philosophy must be primarily attributed to his failure to extend to his historical accounts the same contextual analysis he considered central to his pragmatic methodology.

- APOSTLE, H G.** Methodological Superiority Of Aristotle Over Euclid. *Phil Sci* 25,131-134 Ap 58.
- The article shows that Aristotle's method of presenting mathematics is superior to that which Euclid uses for his *Elements*. Aristotle proceeds from the more to the less abstract, and his scientific order in mathematics is: quantities in general, cardinal numbers, magnitudes in general, and the specific magnitudes in the order of their priority. His procedure has its modern counterpart in algebra, where the order of topics tends to be: groups, abelian groups, rings, integral domains, and fields. Euclid has no definite method; he starts with plane geometry, has no chapter on universal mathematics, sometimes duplicates material, and presents his principles inadequately.
- APOSTLE, Hippocrates George.** *Aristotle's Philosophy Of Mathematics.* Chicago Univ Of Chicago Pr 1952.
- Whether Aristotle wrote a work on mathematics as he did on physics is not known,

and sources differ. This book attempts to present the main features of Aristotle's philosophy of mathematics. Methodologically, the presentation is based on Aristotle's *Posterior Analytics*, which discusses the nature of scientific knowledge and procedure. Concerning Aristotle's views on mathematics in particular, they are presented with the support of numerous references to his extant works. His criticism of his predecessors is added at the end.

APOSTLE, Hippocrates G. The Relation Of Philosophy To The Teaching Of Mathematics. *Buffalo Studies* 2,49-56 JI 66.

This article is a discussion of the relation of philosophy to the teaching of mathematics rests partly on the definition of teaching. The definition includes as elements the teacher, the student, the subject, and the purpose. Thus the philosophy of teaching mathematics must include a discussion of these elements in themselves and in their relation to each other. The article attempts to do this.

APOSTOL, Robert Z (ed). *Human Values In A Secular World*. NY Humanities Pr 1970.

APPEL, Gerson. *A Philosophy Of Mizvot: The Religious-Ethical Concepts Of Judaism, Their Roots In Biblical Law, And The Oral Tradition*. NY Ktav 1975.

The culling out of the commandments from other matter in the Biblical books, the numbering and grouping of them, and the interpretation of them have occupied the attention of many rabbis and Jewish philosophers over the centuries. The present book attempts to round out this process from the standpoint of our own times. Summarizing near the end of the book, Professor Appel, writes that "a philosophy of mizvot can have profound significance in the contemporary age for the Jew who, in common with modern man, seeks a philosophy to live by as he strives to meet the challenge of life, indeed at times to preserve his essential humanity in a confused and threatening world."

APTKEKER, Herbert. *History And Reality*. NY Cameron 1955.

AQUILA, Richard E. *Intentionality: A Study Of Mental Acts*. University Park Penn State Univ Pr 1976.

This is a critical and analytical survey of major modern attempts to deal with the phenomenon of mental directedness to objects, concentrating particularly on the cases of perception and thought. Extensive consideration is given to Descartes, Brentano, Meinong, Husserl, Frege, Russell, Bergmann, Chisholm, and Sellars. "Act-content" approaches are contrasted with object-oriented approaches. It is argued that the most plausible of the former approaches, utilizing an analogy between contents of acts and semantically significant items which constitute overt language, cannot be elaborated apart from major concessions to the object-oriented approach. An adequate account of intentionality requires elements of both approaches.

ARENDR, Hannah. *Between Past And Future: Six Exercises In Political Thought*. NY Viking Pr 1961.

This volume consists of six essays. The author addresses herself to crucial issues in social and political philosophy, but nonetheless dilates on fine points in Greek and Roman thought. The first essay explores the modern break with tradition. The second essay examines the modern concept of history which has replaced traditional metaphysics. The third and fourth essays discuss respectively the concepts of authority and freedom. The two final essays are applications of the kind of thinking displayed in the earlier essays to the immediate practical problems of education and culture in mass societies.

ARENDR, Hannah. *On Violence*. NY 1970.

A theory of the origin, nature, and justification of violence is here propounded and defended. The origin of violence, the author suggests, is to be found in a failure of either power (the ability to act in concert) or authority (the ability to elicit obedience). The essence or nature of violence, according to her view, consists in its use as an instrument; that is, violence is only a means, since no one desires or promotes violence for its own sake.

ARENDR, Hannah. *The Human Condition*. Chicago Univ Of Chicago Pr 1958.

"What we are doing" is... the central theme of this book." The theme is advanced by examination of "the most elementary articulations of the human condition"—labor, work and action, in light of their original hierarchical order from labor to work to action in classic antiquity and their rearrangement in the modern age. Labor is man's activity to meet the needs and wants of life, work his activity of fabricating objects that endure in a public world, and action his political activity to disclose himself in words and deeds. The first reversal in the hierarchy occurred when Greek philosophy downgraded action for contemplation, then construed action in terms of work. At first work enhanced the erection of a public world of enduring artifacts, but with the shift of attention from the objects to the process of production and their value for life, work gave way to labor. Finally, this ultimate reversal of the hierarchy, the victory of *animal laborans* over *animal faber* and *via activa*, appears on the verge of its last stage.

ARENDR, Hannah. *The Origins Of Totalitarianism*. NY Harcourt Brace 1951.

In this volume the author examines the backgrounds from which totalitarianism grows. She deals primarily with Hitler's Germany and attempts to summarize, in a vast generalization, the experience of that totalitarian system. The three major divisions of the book deal with anti-Semitism, Imperialism, and Totalitarianism. While the first two of these divisions were more intimately associated with the Nazi movement than with other historical or even contemporary examples of totalitarianism, the reader will be nonetheless challenged with the thought-provoking assertions made here.

ARMENTROUT, W D. Individuality And Commonality. *Educ Theor* 1,186-189 N 51.

ARMITAGE, Angus. *Sun, Stand Thou Still: The Life And Work Of Copernicus, The Astronomer*. NY Schuman 1947.

ARMOGIDA, Harry. Make Your Teaching Count. *Educ Theor* 13,214-215 JI 63.

ARMOUR, Leslie. The Duty To Seek Agreement. *J Phil* 56,985-991 D 59.

ARMOUR, Leslie. The Ontological Argument And The Concepts Of Completeness And Selection. *Rev Metaph* 14,280-291 D 60.

The author argues that the term "perfect," as employed in the ontological argument, merely means "complete," and that the proposition, "the complete being exists," means either that "everything that is, is" or "all that could exist, does exist." In the

first sense, the proposition is trivially redundant; but the second meaning implies a static and literally unthinkable world. Examining the implications of this argument, the author maintains that any world which is, in actuality, represents a "selection" from a wider set of logical possibilities. He formulates and analyzes four hypotheses which might account for this selection.

ARMSTRONG, A H and Markus, R A. *Christian Faith And Greek Philosophy*. NY Sheed & Ward 1964.

ARMSTRONG, A Hilary. *St Augustine And Christian Platonism*. Villanova PA Villanova Univ Pr 1967.

ARMSTRONG, A Hilary. Reason And Faith In The First Millenium AD. *Proc Cath Phil Ass* 40,104-109 1966.

ARMSTRONG, A H. Was Plotinus A Magician? *Phronesis* 2,73-79 N 55.

ARMSTRONG, A Mac C. Usage And Duty. *Amer Phil Quart* 2,74-80 Ja 65.

Moral usage varies, being established and abandoned in the light not of anything ready-made but of an ideal of human living and dying, the ultimate standard. Yet by being the conscious practice of members of a community acting as such, it constitutes a subordinate standard for anyone with pretensions to belong to that community, and therefore weighs upon him as duty if disinclined so to act. Attempts made, since the variety of usage was noticed, to substitute a morality of insight (natural right) for a morality grounded directly or indirectly on usage either fall back on usage (Plato and Aristotle) or substitute immorality (the sophistic ideal of self-aggrandizement, Diogene's cynicism, and the callousness of the unemotional Stoic sage). The subsidiary Stoic concept of the befitting action is plausible in that we do treat some duties as self-evident, but these prove to consist of the observance of certain inveterate usages.

ARMSTRONG, Arthur. *An Introduction To Ancient Philosophy*. Westminster MD Newman Pr 1949.

The present work has come out of a series of lectures given by the author. "They were given as the first part of a complete course on the history of philosophy which was designed as an accompaniment and supplement to the principal course, a systematic exposition of scholastic philosophy," states the author in his introductory remarks. Chronologically the book begins with Thales and closes with St Augustine.

ARMSTRONG, D M (ed) and Martin, Charles Burton (ed). *Locke And Berkeley: A Collection Of Critical Essays*. Garden City NY Anchor 1968.

ARMSTRONG, D M. *A Materialist Theory Of The Mind*. NY Humanities Pr 1968.

The book defends the identity theory propounded by Smart according to which mental states are nothing but physical states of the brain, this being however understood as a contingent and not a necessary proposition. In support of the possibility of this theory an attempt is made to show that an account can be given of mental states, events and processes solely in terms ultimately of their causal relations to bodily behaviour or outer events affecting the body, thus suggesting that in their own nature also they are just physiological. Much of this account will be of interest even to philosophers who reject the identity theory as impossible, e.g., the discussion of will and the causal theory of inference.

ARMSTRONG, D M. *Perception And The Physical World*. NY Humanities Pr 1961.

ARMSTRONG, D M. Is Introspective Knowledge Incurrigible? *Phil Rev* 72,417-432 O 63.

Armstrong argues that our knowledge of our own mental states is not incorrigible. There is a distinction between the apprehension of a mental state and that mental state itself, and there is always room for error in judging what one's mental states are. Once we see that we can be wrong about our own mental states, moreover, we can see that when we are wrong someone else (a brain scientist, e.g.) might be right. And so we have to discard the belief that we have logically privileged access to our own mental states. Lastly, Armstrong argues that the objects of introspective awareness can exist when we are not aware of them.

ARMSTRONG, David M. Berkeley's New Theory Of Vision. *J Hist Ideas* 17,127-129 Ja 56.

ARMSTRONG, Robert L. *Metaphysics And British Empiricism*. Lincoln 1970.

The primary purpose of this study is to determine the role of metaphysics in the development of British empiricism. Secondly, an effort is made to exhibit continuity of thought as metaphysical interest shifts from ontological issues to epistemological ones. Bacon, Hobbes, Henry More, Ralph Cudworth, Locke, Berkeley, Hume and several minor thinkers are dealt with and various conceptions of metaphysics are explicated and related to the main issues of British empiricism. The doctrine of innate ideas, Locke's "doctrine of signs" and Berkeley's metaphysics are discussed in depth.

ARMSTRONG, Robert L. John Locke's "Doctrine Of Signs": A New Metaphysics. *J Hist Ideas* 26,369-382 Jl-S 65.

The purpose of this paper is to explicate John Locke's conception of metaphysics and determine whether it differs significantly from those of his predecessors or contemporaries. He proposes a "Doctrine of Signs" based on a theory of the relation between *thing*, *idea* and *word*. This relation is *signification* which combines a recognition of the causal relation with the absence of qualitative similarity. Locke intended the doctrine of signs to be a kind of logic which would replace traditional metaphysics.

ARNETT, Willard E. *Religion And Judgment: An Essay On The Method And Meaning Of Religion*. NY 1966.

A study intended to lead to the removal of the deficiencies which make narrowly conceived sociological and psychological approaches to religion unacceptable to philosophical inquiry into religion, and to expose the errors of sectarian approaches to religion. This book is written from a point of view which sees religion as "an irreducible factor of existence or as a form of man's openness to an existence which may be judged religiously," and as "essentially one, though it appears in many varieties." By taking religion as one of the basic ways in which man exists and judges, the author is able to proceed with an investigation of the relationships he believes obtain experientially between this and the other dimensions of human existence, i.e., morality, art, and the pursuit of truth in the sciences. A key concept in the author's position is the theory of judgment based on the thesis that there is a great diversity of modes of judgment, each appropriate to a distinctive aspect of human existence and therefore irreducible to any other mode.

ARNHEIM, Rudolf. *Entropy And Art: An Essay On Disorder And Order*. Berkeley Univ Of Calif Pr 1971.

The author approaches order and disorder as they exist in the arts through a comparison of the arts and physical systems. The focus of the discussion is the concept of entropy which is adopted from physics and is applied to a work of art: a work of art represents, according to the author, "a state of final equilibrium of accomplished order and maximum relative entropy." However, even though order is a universal principle operative in the organic and inorganic realms and in man's productions, it is secondary to the principle of structure which establishes "what a thing is about."

ARNSTINE, Donald Glueck. *Philosophy Of Education: Learning And Schooling.* NY Harper & Row 1967.

The purposes of this book are, first, to examine the methods and practices of schooling and the psychological theories on which they are based; and second, to offer a consistent set of proposals for the improvement of school practices based on a philosophically grounded and empirically testable theory of learning. Current, influential theories of learning are critically reviewed, and an alternative conception of learning is presented in which key similarities are found among the processes involved in reacting to art, in developing curiosity, and in solving problems. The bearing of these processes, and of the values implicit in fostering them, are related to methods of teaching.

ARTZ, Frederick B. *Renaissance Humanism 1300-1500.* Kent OH Kent State Univ Pr 1966.

The treatment of Renaissance humanism is extended to both the Italian and Transalpine schools. A chapter is given to a discussion of the medieval background before proceeding with the developments of humanism in Italy. The two chapters on the Transalpine Renaissance cover Germany, the low countries (in the sequence and reciprocity of influence, with special attention to Erasmus), and also the humanistic movement in England, France, and Spain, and their special cases of mutual influences. The last chapters deal with the significance of Renaissance humanism, and point out its main contributions in introducing novel ideas to the Western world through the revival of the values of the classical heritage.

ARWAY, Robert J. A Half Century Of Research On Godfrey Of Fontaines. *New Scholas* 36,192-218 Ap 62.

The article summarizes the research done by various medievalists since the beginning of the 20th century about Godfrey of Fontaines, a secular master of theology at the University of Paris from 1285 to 1306. The article is in three parts: the first deals with what is known about Godfrey's life and career; the second discusses the chronology, manuscripts, style and historical influence of his writings; and the third outlines his doctrinal positions. The testimony reveals the predominantly Aristotelian and Thomistic influences on Godfrey's thought, his hesitancy about accepting uncritically certain positions of Aquinas and his development of other Thomistic theses beyond Thomas' own formulations. Footnotes give full documentation of research sources.

ASCHENBRENNER, Karl. Critical Reasoning. *J Phil* 57,654-664 S-O 60.

The author takes issue with the commonplace of aesthetics that it is idle to try to reason a person into approbation of disapprobation of a work of art. He argues that there are many areas in which the critic gives reasons for his judgments. These judgments are not mere reports of feelings, but responses whose appropriateness he can show.

ASENJO, F G. A Phenomenological Analysis Of Stravinsky's *Threni.* *Forum (University Of Houston)* 4,4-6 1963.

According to Whitehead, feelings are not mere personal stuff but actual vectors between consciousness and the object of its attention. One's feelings while listening to a piece of music are "feelings-of-the-music-listen-to." The article describes one's consciousness of an aesthetic experience, particularly one's feelings. This description shows that aesthetic experience is no more ineffable or incommunicable than the experience of physical object. The description also shows that by articulating an experience one "completes" the work, given the aesthetic principle that art is inseparable from the experiences it elicits.

ASENJO, F G. Inarticulate Thinking. *Forum (University Of Houston)* 4,31-33 1964.

No idea is born clear and distinct. Each undergoes a process of clarification. This article throws some light on the early stages of the process of thinking. Inarticulate propositions are the product of incomplete thoughts searching for (i) a subject having a given property, or (ii) the properties of a given subject, or (iii) the relations between subjects or properties. When an idea occurs to us it does not come alone but accompanied by a mass of possible consequences, nor does it occur in a vacuum but in the midst of a mass of thinking processes. These are the factors brought into focus and analyzed in this work.

ASENJO, F G. One And Many. *Phil Phenomenol Res* 26,361-370 Mr 66.

Among the categories that Aristotle employed, explicitly or implicitly, few have undergone less critical analysis than "one" and "many." This article reverses the atomistic conception that "many" is a multiplicity of "ones" and instead takes the position that ontogenetically division occurs prior to composition. From this point of view, one and many are defined as characteristics of reality that appear when large conglomerates are being divided into distinguishable parts. This definition is followed by descriptions of possible worlds that can be built on the basis of the various hierarchic interrelations with which one and many can be interpreted.

ASENJO, F G. Polarity And Atonalism. *J Aes Art Crit* 25,47-52 Fall 66.

Polarity is a primitive and irreducible phenomenon. Awareness of it originates in the physiological experiences of pain and pleasure: pain moves us away from a situation or state, while pleasure generates a system of attractions. In art polarity is an all-pervading phenomenon that we experience directly. The article examines the various sources of polarity in art, but in particular, it develops the thesis that atonalism in music is a regressive influence from the standpoint of polarity. Atonalism does not enhance the polar possibilities of music; rather, it forces all sounds to the same level, so that music is no longer pushed or pulled but only moves along indifferently.

ASENJO, F G. Relations Irreducible To Classes. *Notre Dame J Form Log* 4,193-200 1963.

Logic's standard practice of treating relations as classes of ordered pairs of terms has the advantage of simplifying the calculus of relations by making it amenable to set-theoretic treatment, but this practice also has the disadvantage of emasculating the idea of relation by identifying it with what Bradley called "external relations." This paper formalizes "internal relations" by not considering them as classes but rather as binary operators which generate a new term from a given ordered pair of terms, thus distinguishing between related and unrelated terms—internal relations being essential to the terms related, according to Whitehead.

ASENJO, F G. Relativities. *Soundings* 53,46-60 1970.

Our dichotomic thinking is confused by any statement that integrates the external with the internal—physical exertion with phantasy, for example. This confusion of inner and outer is eliminated by denying the reality of one or the other—thus, physicalism and idealism. This work is based on the premise that inner and outer are relativities with which to articulate a reality in which there is no real boundary between the two. The emphasis is on the indivisible interrelation between fantasy and action, feeling and behavior. Several examples show that a persistent distinction between inner and outer is an intellectual perversion, an obstacle to comprehending reality.

ASENJO, F G. The Arithmetic Of The Term-relational Number Theory. *Notre Dame J Form Log* 6,223-228 1965.

As a result of the formalization of the concept of internal relation, a term-relation number theory is introduced. Term-relation numbers are either terms or relations obtained by following predetermined formation rules and by imposing certain postulates that establish their arithmetic properties. Term-relation numbers form rings—nonstandard models of fragments of ordinary arithmetic—which opens the question. Can the Weierstrass final theorem of arithmetic be generalized to number systems originated in the rings of term-relation integers presented in this article? (The answer to this question, obtained in another work, is that the Weierstrass theorem fails for the appropriate extensions of the systems described here).

ASENJO, F G. The Principle Of The Contemporaneity Of All Styles. *Soundings* 58,381-389 1975.

The avant-garde is dead in the arts as well as in literature and music. This does not mean that creativity is exhausted; rather, it forces the artist to revise the way in which he looks at past styles. The thesis is that all styles are psychologically contemporaneous, making their historical ordering superfluous. For the creative mind, it does not matter which style preceded or influenced another; what is important is the identification of the creative impulse behind a style, an impulse that never ends and is forever available.

ASH, William. *Marxism And Moral Concepts.* NY Monthly Review Pr 1964.

English value-language originates in the way we produce and exchange commodities. To the things which we produce and which satisfy our needs, we apply descriptive terms like "good." To our purposive labor, we apply prescriptive terms

like "ought." The puzzles that consequently arise in our value-language are the result of the commodity economy of capitalism, wherein the laborer is alienated from his product. This work endeavors to solve some philosophical-linguistic problems by reference to material, economic processes.

ASHBY, Warren. Teleology And Deontology In Ethics. *J Phil* 47,765-773 D 50.

The author presents the thesis that the conflict between the categories of deontology and teleology is an apparent, not a real one. The analysis he presents deals with: (1) the origin of the ethical predicates, (2) the persons involved in a moral event, (3) the categories of the meaning of the moral predicates, (4) the essential elements of a moral event, (5) the referents of the moral judgment.

AUDI, Michael. *The Interpretation Of Quantum Mechanics.* Chicago Univ Of Chicago Pr 1973.

This book presents a coherent interpretation of quantum mechanics. There are two basic theses of the book: (1) Quantum Mechanics as an indeterministic (yet not a causal) theory; (2) so interpreted, all philosophical problems surrounding the interpretation of the theory are resolvable. Chapter 1 presents the Copenhagen interpretation, free of any "instrumentalistic" or "subjectivist" flavor. Chapter 2 argues the Copenhagen interpretation is inconsistent insofar as it holds both (1) that classical mechanics is a limiting case, but (2) key terms in the two theories are meaning-variant. Chapter 3 argues for the indeterministic (yet causal) character of quantum mechanics. Chapter 4 is an assessment and rejection of hidden variable theories. Chapter 5 explores and rejects attempts to interpret quantum theory by means of non-standard logics. Chapter 6 presents a defense of particle interpretations. Chapter 7 explores relativistic and field theory considerations and indicates some unresolved issues.

AUDI, Robert. "On The Meaning And Justification Of Violence" in *Violence*, Jerome A Shaffer (ed). NY McKay 1971.

This essay develops a detailed account of what violence is and discusses the conditions under which it might be justified. Violence is contrasted with force, terror, brutality, and aggression. It is argued that whether its use is morally justified is to be determined in the light of three principles, a principle of justice, a principle of maximization of freedom, and a principle of maximization of welfare. These principles are clarified, briefly defended, and applied to assessing several substantive views on the justifiability of violence. The essay then develops the implications of the principles for the use of violence in civil disobedience, resistance, revolution, and social reform.

AUDI, Robert. "Violence, Legal Sanctions, And Law Enforcement" in *Reason And Violence*, Sherman M Stanga (ed). Totowa NJ Littlefield Adams 1974.

This paper addresses two questions: In a free, democratic society, (a) what role should legal sanctions play in controlling violence and (b) what role, if any, should violence have in law enforcement? The paper first examines the nature and varieties of violence, assesses some common views about it, and proposes a definition. The next section explores some possible legal prohibitions of violence, and the third takes up possible restrictions of violence in law enforcement. It is argued that the concept of violence is too vague and too liable to distortion to delimit a type of conduct that should be prescribed by law. In a free society, violence must instead be dealt with by prohibiting behavior under descriptions specific enough to protect individual freedom, and by a wide range of social policies.

AUER, Johannes Abraham Christoffel Fagginger and Hartt, Julian. *Humanism Versus Theism.* Yellow Springs OH Antioch Pr 1951.

This volume contains a debate between two religious thinkers on the key questions: Can faith rest on scientific knowledge alone? Is it religion if it lacks God? What can a reasonable man believe? Mr Auer speaks for humanism, and Mr Hartt speaks for the theist point of view. These two viewpoints are vigorously applied to the question: Can man put his entire faith in Man, or must he have God?

AUERBACH, Erich. Vico And Aesthetic Historicism. *J Aes Art Crit* 8,110-118 D 49.

AUGENSTINE, Leroy George. *Come, Let Us Play God.* NY Harper & Row 1969.

This is a book in biomedical ethics with emphasis on recent developments in the biological sciences and the consequent value judgments which these developments are forcing us to make. Topics covered include: predicting birth defects, gene manipulation, organ transplants, the population explosion, mind manipulation, abortion, and the problems of determining responsibility and arranging for decision making in applying scientific technology. The author emphasizes that "we have 10 to 25 years—at most 50—to set up decision-making apparatus and answer some profound questions which previously we have left to God." Specific critical value questions are discussed in a vivid and dramatic way throughout the text. The author's answers to these value questions are based primarily on an ethics of traditional Protestant Christianity.

AUGST, Bertrand. Descartes's Compendium On Music. *J Hist Ideas* 26,119-132 Ja-Mr 65.

The author analyzes here the importance of Descartes' early work, *Compendium musicae*, for his later philosophy. The work itself is outlined, and the arguments of various historical evaluations of this work are traced. The author believes that even in 1618, Descartes considered the function of sensory perception to be similar to that of mechanistic causation. The *Compendium* represents Descartes' first attempt to develop a new scientific method and, the author concludes, is philosophically interesting for this reason.

AUGUST, Eugene R. *John Stuart Mill: A Mind At Large.* NY Scribner's 1975.

This book is an account of the life and mind of Mill, aimed at a general audience and written to establish the unity of Mill's thought. The central argument, pursued by analyses of the works in order of their publication and in the context of his life, is that Mill becomes both poet and logician and that, like Plato, his philosophy is presented in his *persona* or idealized image of himself in the works. The book makes a claim for

- Mill as a major philosopher and for the continuing relevance of the major works. A bibliography of available books and articles by and about Mill and an index are included.
- AUNE, Bruce.** *Epistemology And The Philosophy Of Mind.* NY Unknown 1966.
- AUNE, Bruce.** *Knowledge, Mind And Nature.* NY Random House 1967.
- The book is intended as an introduction to the *Theory of Knowledge* and the Philosophy of Mind. The author approaches these fields from the standpoint, for which he argues, that knowledge does not have an indubitable foundation, and that our conceptual framework does not rest on a basis of primary learned associations between coexperienced items. It is conceivable, he argues, that any claim may be revised or withdrawn, and it is inconceivable that anything could be learned prior to our already having acquired a full complement of concepts. After exploring the implications of these views for knowledge of "inner states" and sense impressions, Aune argues that our commonsense framework is incompatible with the framework of theoretical science. A scientific realist, Aune adopts the stance that our common-sense framework must be reinterpreted in the light of science. The longest single discussion in the book is of the Analogy Theory of Thinking, i.e., the view that intelligent speech may itself be a form of thinking. The author has a heavy intellectual debt to the work of Wilfred Sellars.
- AUNE, Bruce.** *Rationalism, Empiricism, And Pragmatism: An Introduction.* NY Random House 1970.
- AUNE, Bruce.** Abilities, Modalities, And Free Will. *Phil Phenomenol Res* 23,397-413 Mr 63.
- The purpose is to establish that "could have" statements, though in no way equivalent to a set of hypotheticals, are still sufficiently iffy to vindicate Moore's analysis of the free-will problem. The article examines the different senses of "could," and concludes that the "ability" sense is the most important one. The Moorean solution is elaborated, in order to save free-will in the face of determinism. People could have done other than what they did—even though the actions they actually performed had causal antecedents.
- AUNE, Bruce.** Fatalism And Professor Taylor. *Phil Rev* 71,512-519 O 62.
- Aune criticizes Taylor's argument for fatalism (*Philosophical Review*, Volume 71, Pages 56-66) on the grounds that his understanding of human powers and abilities is faulty (he doesn't distinguish between having a power and exercising it), and he is not clear on the nature of necessary and sufficient conditions.
- AUNE, Bruce.** Intention And Foresight. *J Phil* 63,652-653 O 66.
- AUNE, Bruce.** Is There An Analytic A Priori? *J Phil* 60,281-290 My 63.
- The question whether there is an analytic a priori generally gets an automatic 'Yes'. Yet this question ought to be controversial today; for given a fair, non-question-begging definition of 'a priori', the very existence of a priori statements is implicitly denied by today's linguistic philosophers. For if every argument demonstrating the analytic character of some truths must include premises stating contingent facts about linguistic habits, then, clearly, every analytic statement must be a posteriori. This having been established, the paper criticizes the position of these linguistic philosophers and concludes that the question whether there is an analytic a priori is really an open one, having no obvious answer.
- AUNE, Bruce.** Knowing And Merely Thinking. *Phil Stud* 12,53-58 1961.
- The author takes issue with the view of G E M Anscombe that if it doesn't make sense to say "x merely thinks he knows that p," it cannot make sense to say "x knows that p." He compares this view with a similar semantic principle called the principle of non-vacuous contrast which says: "there is a point in speaking of knowledge only where the statement 'he knows that p' has some suitable, significant contrast." He argues that "He (merely) thinks he knows that p" is not, in the logical sense, the contradictory of "He knows that p," but the contrary. Thus, he concludes that if Anscombe's claim rest only on the principle of non-vacuous contrast, it rests on a very weak foundation.

- AUSTIN, J L.** Three Ways Of Spilling Ink. *Phil Rev* 75,427-440 O 66.
- The assigning of responsibility for an action often turns on the question of whether the agent did whatever he did intentionally, or deliberately or on purpose. These three expressions are generally used by philosophers, and by lawyers, as if they were synonyms. However, a study of the use of these expressions in actual or hypothetical situations, as well as an examination of their grammar and etymology, reveals important differences which have bearing on moral philosophy and the law. Consequently, to spill the ink intentionally, or deliberately or on purpose is to do three different things. By examining the differences, a better understanding can be achieved of the concepts of intention, deliberation and purpose, and of the notion of human action.

- AVRICH, Paul.** Anarchism And Anti-Intellectualism In Russia. *J Hist Ideas* 27,381-390 Jl-S 66.
- Tracing the history of the Russian anarchist movement in the early Twentieth century, this work contrasts the hopes of various anarchist leaders with the reality that occurred with the 1917 revolution. The writings of Bakunin and Kropotkin are analyzed, as well as those of more minor figures. The author states that most anarchists were anti-intellectual, and saw their highest hopes for the revolution dashed, for the Bolsheviks set a new class of intelligentsia over the workers and peasants. Instead of nobility, party officials and government bureaucrats became the new source of centralized power, leaving the anarchists bitterly disappointed.
- AXINN, Sidney.** And Yet: A Kantian Analysis Of Aesthetic Interest. *Phil Phenomenol Res* 25,108-116 S 64.
- Suppose that, in addition to having contradictory intentions as their essential nature, humans know themselves to have contradictory intentions. The spectacle that such individuals present to themselves is that of an entity that tries to move in opposite directions, and yet has coherence. For Kant, individuals are continually torn between their personal interest in pleasure and their human interest in mankind's rational progress. This is the one-many predicament that art works objectify. The "nature" that art imitates is the psychological nature of the individual. By generalizing on this framework we find a basis for the aesthetic interest of devices such as *contrapposto*, rhythm, alliteration, a play within a play, etc. The aesthetic moment is assumed to be the moment in which one both wants something to continue because it gives pleasure and yet feels that it must not continue because it is irrational.

- AYER, A J.** Professor Malcolm On Dreams. *J Phil* 57,517-534 Ag 60.
- The author criticizes Norman Malcolm's thesis that dreams are not experiences and defends the classical view of dreams as illusions against Malcolm's and Wittgenstein's arguments. Malcolm, the author contends, relies too heavily on Wittgenstein's dictum

that an inner process stands in need of outward criteria; this dictum is insufficient support for his untraditional account of dreams.

AYER, A J. Rejoinder To Professor Malcolm's "Professor Ayer On *Dreaming*". *J Phil* 58,297-299 My 61.

AYER, Alfred Jules. *Russell And Moore: The Analytical Heritage*. Cambridge Harvard Univ Pr 1971.

The essays on each philosopher form a unified whole, for Ayer traces the development of ideas and tries to show how different doctrines within each theory cast light upon one another. He focuses on the metaphysical and epistemological views of Russell and Moore: there is little treatment of ethical issues, therefore, except, as in Moore's case, it helps to illustrate his method of analysis. Complex technical issues are set forth in relatively plain and simple language. But the book also displays Ayer's own mind at work, continuing and attempting to advance within the very analytic tradition he explains.

AYER, Alfred Jules. *The Foundations Of Empirical Knowledge*. NY Macmillan 1940.

This book by Mr Ayer presents in closely reasoned form a searching and argumentative analysis of what is usually called "our knowledge of the external world." It deals with the problems of illusion and error; the nature of the "given"; the characterization of sense data; public and private languages; the meaning of symbols and propositions; the egocentric predicament; the problem of other people's experiences; the causal theory of perception; causality in general; and finally, the logical construction of material things and the distinction of "appearance" and "reality."

AYERS, Robert H (ed) and Blackstone, William T (ed). *Religious Language And Knowledge*. Athens Univ Of Georgia Pr 1972.

This book is a collection of eight essays. "Religious Language" in the title indicates the volume's central focus: what is the truth—and life—value of religious affirmations?

BABIĆ, Ivan. Blanshard's Reduction Of Marxism. *J Phil* 63,745-756 D 66.

The author asserts that "economic determinism" to which Blanshard reduces Marxism is only one of its constitutive elements. It implies that philosophy, religion, art, morals etc. should be connected with the totality of a historical context and does not necessarily mean that metaphysics is absolutely determined by economic and political factors. Marxism as a Western philosophy aimed at the revolutionary transformation of the world charts the fundamental ways of human action, the ways of overcoming man's alienation in a new human association. Specifically in the realm of metaphysics it has been concerned with the critique of the traditional metaphysics as well as the creation of varieties of metaphysics of its own. The discussion of Marxism today presupposes the recognition of all the complex elements and features of the contemporary Marxism.

BACCA, Juan David García. E Husserl And J Joyce, Or, Theory And Practice Of The Phenomenological Attitude. *Phil Phenomenol Res* 9,588-594 Mr 49.

BACCHETTI, Raymond. Experimentalist Value Theory In American Culture. *Proc Phil Educ* 17,76-81 Mr 61.

BACH, Kent. *Exit-Existentialism*. Belmont CA Wadsworth 1973.

This book deals with an analytic approach to the basic existential problems of meaning, identity, and freedom. The quest for meaning in an impersonal universe is shown to be not only logically incoherent, but provoked by an avoidable frame of mind. Identification fares no better, generating the dilemma of alienation: misidentification or nonidentification. The quest for self poses an analogous dilemma: overidentification or disidentification with what one is. Finally, the concept of self is examined and the systematic elusiveness of self explained. In the face of an absurd world and an elusive self, a positive conception of freedom is formulated.

BACON, John. A Simple Treatment Of Complex Terms. *J Phil* 62,328-331 Je 65.

Geach has produced some ingenious examples to illustrate the anomalies that arise when complex terms like 'woman whom every tribesman admires' are treated as

genuine logical units analogous to simple terms. If we formalize complex terms by means of a binding operator $\xi\alpha$ —so that α which is ϕ becomes $\xi\alpha\phi$ —the anomalies disappear. They result, as it turns out, from confusions about the overlapping scope of ξ -operators and quantifiers.

BACON, John. An Alternative Contextual Definition For Descriptions. *Phil Stud* 16,75 1965.

BACON, John. Entailment And The Modal Fallacy. *Rev Metaph* 18,566-571 Mr 65. In his 1964 article, "A Question of Entailment," John O Nelson proposed a definition of entailment intended to support Anderson and Belnap's rejection of fallacies of modality in "The Pure Calculus of Entailment" (1962). However, the author argues here that Nelson misconstrued Anderson and Belnap's statement of the fallacies; that his explication of entailment is incompatible with theirs; and that his definition of entailment is, in any case, unacceptable.

BAHM, A J. *Philosophy Of The Buddha*. NY Harper 1959.

Disturbed by conflicting doctrines of different Buddhist sects, the author discovered, by reading the *Pali Pitakas* in Rangoon University, what appears to be the original teaching of Gotama, the Buddha. It is: Desire for what will not be attained ends in frustration; to avoid frustration, avoid desiring what will not be attained. The desire to avoid such desiring may itself be desired too much. The middle way, between desiring too much and too much desire to avoid such desiring, is willingness to accept things the way they are and are going to be. Not extinction of all desire (as held by Theravadins and many Hindus) but only of unrealizable desires, constituted his radical enlightenment. His views are exemplified in chapters on the Four Truths, the Eight-Fold Path, the Middle Way, Nirvana, Dhyana, Sangha, and No-Soul.

BAHM, A J. Opposition Of Compound Propositions. *Phil Sci* 13,78-79 Ja 46.

Compound propositions exhibit relations analogous to those diagrammed by the traditional square of opposition. Each compound proposition has either three contraries and three subalterns, or three subcontraries and three superalterns.

BAHM, Archie J. *The Heart Of Confucius*. NY 1969.

A J Bahm says that in preparing his material, he relied on the translations of Legge, Hughes, Collier, Lin and others, and interpreted freely. With such freedom he has sought to correct the limitations of the scholarly texts—their wooden style, literal outlook and obvious sententiousness—and present Confucius as one of the world's most influential philosophers whose ideas "promise to play a determining role in the culture now emerging." Where the scholars see gaps in the manuscripts and books of disputed genuineness, Bahm finds a consistent philosophy in the writings of Confucius and "a system gestalt." He says that his interpretation is "selective" and aims to bring to the non-scholarly reader a great philosophy which can be grasped with "clarity, simplicity and wholeness."

BAHM, Archie J. *The World's Living Religions*. NY Dell 1964.

In an introductory section the author points out the need for additional insights into the great living world religions. The problem of yesterday was to secure religious freedom and tolerance. Because of the interpenetration of the world's religious today, the problem now is to adjust the adherents of the different faiths so that they can coexist interactively. This book is designed to acquaint the reader with the basic ideas of such living religions as Hinduism, Jainism, Buddhism, Taoism, Confucianism, Judaism, Islam, Christianity, and others. A chapter on Humanism is included. The study ends with a chapter on the possibility of a world religion.

BAHM, Archie J. *Types Of Intuition*. Albuquerque Univ Of New Mex Pr 1960.

Intuition may be both simple and complex, simple as immediacy of apprehension, complex as both subjective and objective and as the complexities of objects apprehended. Types examined: Objective Intuition, Subjective Intuition, and Organic Intuition, and interrelations of these types with aesthetic (complete-in-itself) and incomplete experiences and with apparent and apparently real objects. Organic intuition involves not only both subjective and objective aspects interdependently but also the objective and subjective aspects as partly differentiated and partly undifferentiated.

BAHM, Archie J. *What Makes Acts Right?* Boston Christopher 1958.

The Introduction states: "The aim of this book is to stimulate thinking about acting.... The aim... is pursued here by selecting twelve well-known types of theories, by streamlining them into simple statements, and by asserting some typical advantages and disadvantages of each...." The author proposes seven criteria for judging these theories. The twelve theories considered are that the moral sanction comes from: Custom, Group Approval, Law, Contract, Success, Conscience, Authority, Self-Realization, Good Results for Others, For Oneself, for the Best People and for the Most People. The book does not attempt to indicate "the direction in which a satisfactory solution is most likely to be found."

BAHM, Archie J. Aesthetic Experience And Moral Experience. *J Phil* 55,837-845 S 58.

This article contains several theses: Experience is aesthetic when enjoyed as complete in itself, and moral when felt as incomplete and needing more to complete it. An experience is itself an intrinsic value to the extent that it is experienced as complete in itself, and as an instrumental value to the extent that it is experienced as a means to

something more. Most experiences have both aesthetic and moral aspects. Moral aspects are also implicitly aesthetic, and aesthetic aspects are also implicitly moral. Experiences that are both aesthetic and moral may be more completely aesthetic than those which are aesthetic merely and may be more completely moral than those which are moral merely. Consequences of these theses for art and society are explored.

BAHM, Archie J. Beauty Defined. *Phil Rev* 56,582–586 S 47.

Beauty is pleasant feeling objectified, i.e., appearing as an object, involving either sensation, pattern, meaning or a combination of these, and some degree of organic unity. Sensations may be of any kind, gustatory, kinaesthetic and thermal, as well as visual and auditory. Meaning may be symbolic or nonsymbolic, rational or emotional, clear or vague. Organic unity involves both unity and disunity, sameness and difference, oneness and manyness. Isolation, idealization, system and harmony all exemplify principles of organic unity.

BAHM, Archie J. Buddhist Aesthetics. *J Aes Art Crit* 16,249–252 D 57.

BAHM, Archie J. Comparative Aesthetics. *J Aes Art Crit* 24,109–120 Fall 65.

BAHM, Archie J. Does Seven-Fold Predication Equal Four-Cornered Negation Reversed? *Phil East West* 7,127–130 O 57–Ja 58.

BAHM, Archie J. Emergence Of Purpose. *J Phil* 44,633–635 N 47.

Purpose, as causation of what is present by what is future, is omnipresent in two ways: 1) Each cause-effect event involves both identity and difference. Insofar as cause and effect are identical, the consequent effect is as much a cause of its antecedent as the antecedent is of the consequent; 2) Since, as Emergentism demonstrates, higher levels of existing units have a kind of force relative to lower-level units which is both compelling and partly future with respect to many successive presents in the lower-level entity. Organicism incorporates such emergentistic teleology.

BAHM, Archie J. Emergence Of Values. *J Phil* 45,411–413 JI 48.

BAHM, Archie J. Evolutionary Naturalism. *Phil Phenomenol Res* 15,1–12 S 54.

Exposition and criticism of the Emergent Evolutionism of Roy Wood Sellars. Being a Materialist, he interpreted evolution in terms of physical categories: substance, change, novelty, organization, structure, function, properties, causality, and levels. But: 1) He took "evolution seriously," but was not a thoroughgoing evolutionist; 2) There is no evolution beyond the physical, but only within it; 3) The universe as a whole does not evolve; 4) No downward evolution of new parts; and 5) Between upper and lower limits, he was not completely evolutionary: Substance only partly evolutionary. It neglects multidimensional evolution. It also neglects dialectical evolution. Regarding knowledge, truth, logic, God, he was less evolutionary than many contemporaries.

BAHM, Archie J. Existence And Its Polarities. *J Phil* 46,629–636 S 49.

Existence is described by 25 polarities: unity-plurality, sameness-difference, continuity-discontinuity, whole-parts, spirit-matter, particular-universal, being-nonbeing, things-space, quality-quantity, internal-external relations, immanence-transcendence, permanence-change, substance-function, duration-event, old-new, actual-potential, end-means, goal-aim, intrinsic-instrumental value, finite-infinite, cause-effect, good-evil, freedom-necessity, intelligence-unadaptability; and five theses: Each term is a category of existence. Each pair is a categorical polarity. Existence involves both poles "equally." No extreme ends of poles exist. Existence involves no last end of any existential polarity.

BAHM, Archie J. Freedom Is Fitness. *Scientific Monthly* 18,135–136 Ag 46.

A person is free whenever he is able to do what he wants to do. Both his abilities and wants are caused. Causes conceived as internal are "capacities." Causes conceived as external are "opportunities." Freedom involves fitness of capacities and opportunities, for lacking a capacity to use an opportunity and lacking an opportunity to use a capacity are equally debilitating. Increasing one without increasing the other may decrease their mutual fitness, and increase unfreedom. Awareness of opportunities and desire to use opportunities function as abilities (sometimes more as capacities, sometimes more as opportunities). Conflicts of desires decrease freedom. Freedom from choice may increase one's freedom.

BAHM, Archie J. Matter And Spirit: Implications Of The Organistic View. *Phil Phenomenol Res* 20,103–108 S 59.

The article states the Organistic thesis about relations of wholes and parts to spirit and matter. Spirit, as wholeness, and matter, as plurality of parts, interdepend in constituting existences. Implications of this thesis for six polarities: permanence and change, duration and events, things and space, measurability and immeasurability, finiteness and infinity, and conservation of matter as related to eternality of spirit. Each polarity has both spiritual and material aspects as constituents.

BAHM, Archie J. Meanings Of Negation. *Phil Phenomenol Res* 22,179–184 D 61.

BAHM, Archie J. New Rules For Sorites. *New Scholas* 20,323–333 O 46.

This article reexamines definitions of Goclenian and Aristotelian sorites by demonstrating that complete induction of all valid sorites of two syllogisms of Type I (77) and of Type II (83) reveals some rules false because too restrictive. Numbering all types of sorites of two syllogisms (160) and assembling them in three tables enables demonstration of many new rules. Development of new comparative rules regarding Goclenian and Aristotelian types is made possible by tabulating comparative summaries of 16 possibilities for each Type. Rules for 24 kinds of infinite series in the second, third and fourth figures are also tabulated.

BAHM, Archie J. Nonreductionistic Existentialism. *Monist* 50,145–156 Ja 66.

Currently popular Existentialism tends to be extremely reductionistic, misinterpreting man, (1) involving mutually interdependent "existence" and "essence," as more "existence" than "essence," (2) involving mutually interdependent "causing" and "being caused," as more causing than caused, (3) involving mutually interdependent "self-as-subject" and "self-as-object," as being more self-as-subject than

self-as-object, and (4) involving interdependent "meaningfulness" and "meaninglessness," as being more meaningless than meaningful. "Organicism," a nonreductionistic type of existentialism, embodies four principles for avoiding extreme reductionism: it (1) accepts both sides of every genuine issue as partly true, (2) avoids misinterpreting opposites as contradictories, (3) recognizes the interdependence of opposites as involving polarity, and (4) observes in how far experienced variability (e.g., of self, sometimes more as subject and sometimes more as object) better supports a "both-and" (or "organic") logic than an "either-or-but-not-both" logic.

BAHM, Archie John. *Ethics As A Behavioral Science*. Springfield IL Thomas 1974.

All the sciences are here regarded as value-laden. An ethics based on scientific values can be developed from the point of view of hominology, the science of the whole man. This has not been grasped by advocates of Thomism, Materialism, Spiritualism, Positivism, Linguistic Analysis, Existentialism, Phenomenology, Hinduism, Buddhism, Taoism and Confucianism—all of which are obstacles to a scientific ethics. The four kinds of intrinsic values are: pleasant feeling, satisfaction of desire, enthusiasm and contentment. There are also instrumental values. These values provide a context of oughtness in which the ethical act of choosing occurs. Personal and social ethics are briefly developed in the concluding chapters, in terms of individual or group choices.

BAHM, Archie John. *Metaphysics: An Introduction*. NY Harper & Row 1974.

This book is an introduction and survey of opinions. Bahm writes clearly, giving the student a good bird's eye view of the range of metaphysical issues. In the Introduction, he raises the questions "Why Metaphysics?" and "What is Metaphysics?" and attempts to answer them. Part One, on Process, includes chapters entitled "Things," "Differences," "Change," and "Wholes," for example, all of which Bahm considers to be basic categories. Part Two is on Causation and Part Three on Dialectic.

BAHM, Archie J. Organic Unity And Emergence. *J Phil* 44,241–244 Ap 47.

Organic unity is used by Organicism as an ultimate principle of explanation. It involves both unity and plurality, identity and difference, permanence and change, stability and novelty, and substance and function, interdependently, i.e., both of two polar opposites mutually complement each other and all pairs supplement each other in constituting existence. The article claims that the Organistic interpretation of the emergence of novelty (and new levels of existence) is more adequate than that of the Emergentists.

BAHM, Archie J. Organistic Dialectic. *Phil Phenomenol Res* 18,541–543 Je 58.

BAHM, Archie J. Oriental Philosophy. *Rev Metaph* 4,311–314 D 50.

BAHM, Archie J. Polarity: A Descriptive Hypothesis. *Phil Phenomenol Res* 21,347–360 Mr 61.

It is asked, what is polarity? Bahm states that the concept involves at least three categories—oppositeness, complementarity, and tension. His hypothesis is that any two categories essential to the nature of polarity mutually involve each other. Oppositeness has two positives, each of which is opposed to the other. Complementarity presupposes oppositeness, and has: supplementarity, interdependence, dimension, reciprocity. Tension is a stretching of anything due to two or more divergent tendencies. Hence, polarity categorically involves oppositeness, complementarity, and tension.

BAHM, Archie J. Rightness Defined. *Phil Phenomenol Res* 8,266–268 D 47.

BAHM, Archie J. Some Principles For Choosing. *Phil Today* 9,52–60 Apr 65.

BAHM, Archie J. Teleological Arguments. *Scientific Monthly* 58,377–382 My 44.

This article is a summary review of arguments for world purposiveness emphasizing: design, analogy, complexity, evolution, value, progress, cause, authority, self-contradiction by mechanists, proof by mechanists, unprovability of mechanism, universal agreement, and pragmatism.

BAHM, Archie J. The Organistic Argument Regarding Inference Beyond Experience. *Rev Metaph* 11,337–341 D 57.

BAHM, Archie J. Theories Of Conscience. *Ethics* 75,128–131 Ja 65.

BAHM, Archie J. What Is Knowledge? *Scientific Monthly* 56,266–273 Mr 43.

This article explains naive realism and scientific realism as theories of knowledge and criticizes naive realism. It fails to account satisfactorily for error, fails to take into account extra-organic and intra-organic conditions of knowing, differences in public knowing, and the constructed character of knowing. The author criticizes scientific realism, scientists' dependence on senses for information and scientific concepts as human constructs. Scientific realists unwittingly claim impossible transcendence and fail to explain why "objects" appear as if they were "things."

BAHM, Archie J. What Is Philosophy? *Scientific Monthly* 52,553–560 Je 41.

Philosophy is described as having four components: attitude (troubled, reflective, doubting, undogmatic, open-minded, willing to be guided by experience and reason, speculative, willing to suspend judgment, persistent), method (reflection, analytic and synthetic), problems (constituting (1) the philosophical sciences: logic, epistemology, metaphysics, axiology, ethics, aesthetics, philosophy of religion, society, government, education, history), and (2) a comprehensive science: critical comparisons of presuppositions and conclusions of, synthesis of, and mother of the sciences.

BAHM, Archie J. What Is Philosophy? *Scientific Monthly* 52,553–560 Je 41.

Philosophy is described as having four components: attitude (troubled, reflective, doubting, undogmatic, open-minded, willing to be guided by experience and reason, speculative, willing to suspend judgment, persistent), method (reflection, analytic and synthetic), problems (constituting (1) the philosophical sciences: logic, epistemology, metaphysics, axiology, ethics, aesthetics, philosophy of religion, society, government, education, history, and (2) a comprehensive science: critical

BAIER, Kurt (ed) and Rescher, Nicholas (ed). *Values And The Future: The Impact Of Technological Change On American Values*. NY Free Pr 1969.

This collection integrates the work of philosophers in clarifying theoretical and methodical concepts with that of social scientists in generating and testing hypotheses, to predict the outcomes of probable changes in American technology and values in the next 30 years. Contents are divided into 3 main sections. Part One, "Analysis," provided behavioral definitions of the key terms "value" and "value change," clarification of criteria of related terminology, and several sketches of techniques of applying the resultant conceptual scheme and methodology to past and future value change/technological change interactions. Part Two, "Interaction"; involves numerous hypotheses about the character of the relationship between values and technology and poses many issues for future investigation. Part Three, "control," takes up the issue of how the interaction of value and technology can be influenced. An introductory essay provides a summary and partial critique of the 3 parts.

BAIER, Kurt. *The Moral Point Of View: A Rational Basis Of Ethics*. Ithaca NY Cornell Univ Pr 1958.

This book holds that although moral judgments provide guides for conduct, they also state "natural, if complicated facts" and are either true or false. Questions of practical reasoning in particular contexts involve value judgments which are capable of verification by an appeal to "good reasons." Questions for superiority enter when there is a conflict of rules; and there are any number of individual, social, and moral rules to which we may appeal. But a difficulty arises when there is a conflict between reasons of self-interest and morality. This leads Baier directly to the "moral point of view" as the major premise in all practical deliberation, and the fact that it should prevail. "The moral point of view" treats moral rules as social principles which are meant for the good of everybody. Morality is defended as the "rational course." Without it life would be difficult; it is to the interest of everyone alike, but it is not identical with self-interest.

BAIER, Kurt. Acting And Producing. *J Phil* 62,645-648 N 65.

BAIER, Kurt. Action And Agent. *Monist* 49,183-195 Ap 65.

The thesis defended is that all types of action admit of deterministic explanations. Five senses of "action" are distinguished, from one another, from "occurrences" and "undergoings," and from the philosopher's important notion of "performing an action." The latter is explained as the exercise of the capacity for action. The nature of that capacity is brought home by two imaginary cases, the Prisoner in his Body and the Conscious Puppet, illustrating the almost total loss of it. The Prisoner, still having goals but unable ever to reach them because perpetually overwhelmed by opposing and superior forces, has altogether lost control over the environment, though retaining vestigial control over his body. The Puppet, capable merely of envisaging desirable or undesirable states of affairs but incapable of initiating bodily change, retains control only over the mind. Finally, the agent's having control over something is explained in terms of the necessary and sufficient conditions of occurrences.

BAIER, Kurt. Moral Obligation. *Amer Phil Quart* 3,210-226 JI 66.

In Section I, it is argued that (a) all obligation claims spell out assignments with a characteristic moral binding force, that (b) they are that subclass of claims with such a binding force which assign a task, that is, something whose execution involves some effort, and that (c) the classification of obligations as legal, contractual, promissory, moral, and the like, is based, not on differences in binding force but, rather, on how they arise. In Sections II and III, an attempt is made to refute various theories of the origin of obligation which are incompatible with thesis (a). In Section IV, attributing moral binding force to an assignment is construed as claiming that whether or not the assignee carries out the assignment is not solely his own business. The practice of making claims with such moral binding force is then justified by a demonstration of the need for institutions which require such claims for its functioning. It is argued that this view alone can provide both a justification for the existence of such claims and a method for determining their legitimate content.

BAILIFF, John D. Some Comments On The 'Ideal Observer'. *Phil Phenomenol Res* 24,423-428 Mr 64.

The purpose of this article is not to examine the concept of the ideal observer as to its qualifications as an ethical theory, but to expose the implications it has for an understanding of the role of rationality in ethical discourse. The "ideal observer theory" is really not value-free, according to the author. The meaning of such an observer is fully explored, in terms of being "impartial," "fully informed," "ideally rational," etc., and rationality is finally noted to be not a perfect uniformity of attitudes among ideal observers but the freedom and willingness to ask for reasons, to argue.

BAKAN, Mildred. Awareness And Possibility. *Rev Metaph* 14,231-242 D 60.

The author argues that the subject's sense of his future as an indeterminate locus of alternatives constitutes awareness. Before presenting this account of awareness as essentially subjective freedom, she reviews William Earle's treatment of intentionality in *Objectivity* (1955). She then compares decision and the process of goal realization to intention and expression, discusses metaphysical and epistemological objectivity, and explains self-awareness in terms of indecision concerning one's own nature, or the felt exclusion of alternatives. The author concludes with remarks on the implications of her account of awareness for logic, understood as the laws of thought.

BAKER, Herschel Clay. *Wars Of Truth: Studies In The Decay Of Christian Humanism In The Earlier Seventeenth Century*. Cambridge Harvard Univ Pr 1952.

The early 17th-century witnessed a slow deterioration of Renaissance optimism and Christian humanism. The author examines the forces that tended to disrupt or modify that rich tradition. He discusses the intellectual and literary aspects of the pessimism of several late Elizabethan and Jacobean writers in interaction with the optimism of Bacon and his successors. The ancient concept of human dignity is examined in the light of the changes in political, theological, and scientific thought of the earlier 17th-century. The book discusses Ockham's rejection of Thomistic rationalism, the Christian asceticism that runs from the Middle Ages throughout the Renaissance, the scepticism of men like Montaigne, the revival of Augustinian theology by Luther and Calvin, the political tension between Anglicans and Puritans, and the beginnings of scientific materialism.

- BALZ, Albert G A.** *The Value Doctrine Of Karl Marx.* NY King's Crown Pr 1943.
Professor Balz points out that the analysis of *Capital* is not merely economic and sociological but also philosophical. "The analysis offered in the opening pages..., and the ontology involved," he says, "is essentially Aristotelian in spirit and technique." A commodity, which is a "thing" or "individual," is unique and irreplaceable, yet identical with other commodities in exchange. Thus an old philosophical problem emerges in an economic setting. Balz contends that Marx could have gone deeper had he made further use of Aristotelian ideas, such as prime matter, and invents two angels who make distinctions and show how it could be done. The conclusion reached that "commodities are not incorporations of 'labor' but of mind," is on a philosophical plane. Balz does not claim to have refuted the labor theory of value, and shows little interest in Marx's main theme.

The author is concerned primarily with the doctrines of Descartes on the nature of man and presents not so much an exposition of Descartes' expression of these doctrines, as a discussion of their interpretation and development by his successors. He traces the diffusion of Cartesianism in the history of thought, and discusses the relation of Descartes' dualistic doctrine of mind and body to subsequent history of philosophy, psychology, physical science, and other disciplines. In a final essay he indicates how deeply Descartes' doctrines of mind and body and of matter were rooted in pre-Cartesian tradition.
- BALZ, Albert George Adam.** *Descartes And The Modern Mind.* New Haven Yale Univ Pr 1952.
Professor Balz presents an interpretation of the philosophy of Descartes as central in the transition from the medieval tradition to the formation of the modern mind. The position is taken that the doctrines of St Thomas Aquinas and especially St Thomas' efforts to determine the relations of faith, theology, and philosophy, broadly defined the conditions that facilitated the transition. The so-called revolution effected by the works of Descartes occurred under these conditions, its objective being to establish the philosophical basis for the development of natural science in order to assure man's control over the physical world.

- BANNAN, John F.** *The Philosophy Of Merleau-Ponty.* NY 1967.
This sympathetic account treats Merleau-Ponty's major books and articles in largely chronological order, stressing the unity of his general philosophical tendency to constitute an "enlarged reason" at the expense of the claim to absolute knowledge, and explaining varying emphases in terms of a deepening of the central themes. After chapters on *The Structure Of Behavior* and *The Phenomenology Of Perception*, the author traces Merleau-Ponty's volatile relations with the Church and the Communist Party, from early sympathy in each case to criticism of their respective dogmatism, complemented by an effort to maintain dialogue and to keep open genuine insights. A chapter is devoted to the relationship of Merleau-Ponty and Sartre. Sartre provides the author throughout with an effective contrast to Merleau-Ponty, focusing on knowledge and the separation of consciousness and being, while Merleau-Ponty, focusing on perception, is directed to uncovering the pre-reflective Being which presumptuous and forgetful reason has historically claimed to possess.
- BANNAN, John F.** Merleau-Ponty On God. *Int Phil Quart* 6,341–365 S 66.
"It is characteristic of man to think God," Merleau-Ponty said, "but this does not mean that God exists." Not only is the existence of God indemonstrable but it is irreconcilable with the existence of man as a source of meaning. Furthermore, the affirmation of God is often a threat to man's theorizing and to his relations with other men. Yet the problem of God is radical in the sense that it stands beyond every

- attempt at solution, and the Christian experience has been the source of important philosophical work. The problem has no solution which would be a philosophical truth, but serious dialogue between philosopher and Christian can take place and yield important benefits to both. It requires that the philosopher take religious experience seriously and that the Christian be willing to submit to philosophical scrutiny.

- BAR- HILLEL, Yehoshua.** Can Indexical Sentences Stand In Logical Relations? *Phil Stud* 14,87-90 1963.
- The article centers on a dispute between Bar-Hillel and Castaneda regarding a distinction between nonindexical and indexical sentences. Bar-Hillel argues that applying logic to context independent sentences of ordinary language has been on the whole fairly successful, but applying logic to context-dependent sentences by treating them as entities that are either true or false must occasionally lead to spectacular failures. He concludes that with respect to ordinary language, logical relations hold primarily between the nonindexical (context-independent) sentences that can be used to make them, but not at all, in any nontrivial sense, between indexical sentences.

- BARKER, Ernest.** *The Political Thought Of Plato And Aristotle.* NY Dover 1960.
- BARKER, Joseph E.** *Diderot's Treatment Of The Christian Religion In The Encyclopédie.* NY King's Crown Pr 1941.
- This book is inquiry into the justice of the belief that Diderot's articles in the *Encyclopédie* treating of matters pertinent to Christianity were hostile to that religion. The author finds that the Church was "right in regarding the *Encyclopédie* as an enemy." The demonstration is based on a painstaking analysis of Diderot's several articles dealing with religious and ethical questions, separating out those portions which are believed to have been included for reasons of prudence, and comparing the residue with traditional Christian doctrine.
- BARKER, S F.** *Induction And Hypothesis A Study Of The Logic Of Confirmation.* Ithaca NY Cornell Univ Pr 1957.
- The author reviews and criticizes the answers of Keynes, Reichenbach, Carnap, and others to the following two questions: (A) Given two alternative hypotheses, which shall be chosen for scientific purposes? (B) Can the principle employed in the assessment of hypotheses be justified? In reply to (A) the author recommends the simpler hypothesis. In reply to (B) he points out that the principle of simplicity maximizes the possibility of disconfirmation. In explaining "simplicity" he develops certain ideas of Professor Kemeny and proposes that a sentence, S, is simpler than T, if S has more models than T. A model for S is a possible universe determined by the predicates in S and a specified number of entities; this universe being one in which S obtains.
- BARKER, S F** and Achinstein, Peter. On The New Riddle Of Induction. *Phil Rev* 69,511-522 O 60.
- BARKER, S F** and Kyburg Jr, H E and Salmon, W C. Symposium On Inductive Evidence. *Amer Phil Quart* 2,265-280 O 65.
- This paper attempts to undermine the following dissolution argument: To be rational is to fashion one's beliefs according to the evidence—inductive evidence is one basic type of evidence—thus, there is no question as to whether it is rational to employ induction. The problem of justification thereby evaporates. The critique rests upon the fact that, to have a viable concept of evidence, we must choose from among a wide variety of possible rules. The problem of justification is the problem of justifying such choice. The paper criticizes Carnap's view that such choice must be based upon "inductive intuition."
- BARKER, Stephen (ed)** and Achinstein, Peter (ed). *Legacy Of Logical Positivism: Studies In The Philosophy Of Science.* Baltimore Johns Hopkins Pr 1969.
- This book contains ten essays discussing the contributions of logical positivism to the philosophy of science. The articles are uniformly high grade and for the most part non-technical. The overall result is to place the positivist movement in a historical perspective both with respect to its positive contributions to the philosophy of science as well as with respect to questions whose importance became evident only as a result of the shortcomings of the positivistic analysis.

BARNES, W H F. *The Philosophical Predicament.* Boston Beacon Pr 1951.

BARNES, W H F. Knowing. *Phil Rev* 72,3-16 Ja 63.

Barnes examines two analyses of "I know" which assign to it a practical function rather than an informative function. The first treats "I know" as a performative expression like "I promise." Barnes shows the dissimilarities here, especially the fact that "I know" is true or false while "I promise" is not. The second analysis treats "I know" as parenthetical, as a way to signal that my statement is trustworthy. This analysis, Barnes says, needs clarification. Even if "I know" sometimes has a practical function, he concludes, it also has an informative one.

BARNETT, George and Otis, Jack. *Corporate Society And Education, The Philosophy Of Elijah Jordan.* Ann Arbor 1961.

Jordan's work may best be described as a philosophy of culture. He has worked out an interesting organic theory of culture with strong affinities to Hegel, and yet which sharply diverges from the Hegelian point of view. Barnett and Otis attempt to present both the social theory and to apply it to educational theory. There is a discussion of Jordan's notion of objective virtues of culture (wisdom, temperance, courage, and justice). The second section of the work outlines the corporate theory of education. The cardinal notion is that the state must advance culture in all its forms. Education depends upon such an advance for the realization of its object.

BARNETT, Lincoln Kinnear. *The Universe And Dr Einstein.* NY Sloane 1948.

Albert Einstein is absolutely great; all else is relative. Such is the adulatory thesis of this brief, but perspicacious exposition of the reaches of modern physics. It is particularly impressive for the philosopher because at every turn the author succeeds in suggesting the philosophic implications of relativity.

BARNETT, Zolo George (ed). *Philosophy And Educational Development.* Boston Houghton Mifflin 1966.

This book contains six papers originally prepared for a conference at the College of Education of Michigan State University in November, 1965, considering the question "What can philosophy contribute to educational development?" Henry Aiken answers with a philosophical account of the concepts of educational development and the teacher, and of some of the logical conditions of learning. Walter Kaufmann, doing both analytic and normative philosophy as Aiken did, contributes a critique of non-normative education and argues that it is a failure. Michael Scriven shows the practical consequences for education in some of the philosophical implications he sees in the social sciences. Abraham Edel sets three tasks for himself: exhibiting the contributions of philosophical anthropology to our understanding of schooling; showing the functional relations of schooling to society, and thereby the unavoidably normative character of educational theory; and raising questions about the value base to be used for such a theory.

BARR, Stringfellow. *The Three Worlds Of Man.* Columbia 1963.

This is the Second Series of "The Paul Anthony Brick Lectures" rewritten for publication. Written in the light of "our growing conviction that... there has been some sort of moral deterioration" during this century, the author argues that we could profitably return to the Greeks for reorientation. Each lecture concerns an area essential to the moral life as dealt with by Socrates, Plato and Aristotle, namely "Action," "Wisdom," and "Grace," the last dealing with pre-Christian intimations among the Greeks with respect to the realm of the divine.

BARRAL, Mary Rose. *Merleau-Ponty: The Role Of The Body-Subject In Interpersonal Relations.* Pittsburgh Duquesne Univ Pr 1965.

In this book Merleau-Ponty is situated within the contemporary history of thought. We are given a balanced exposition of his philosophy following its basic genetic development through the phenomenology of perception and the body-soul dialectic. Questions such as the problems of interpersonal relations, the distinction between subjectivity and personality and the interrelation of consciousnesses are clearly presented. The book also includes a critical summary of the major contributions made by other writers to the understanding of Merleau-Ponty, as well as a discussion of Merleau-Ponty's interpretation of other philosophers on specific points, such as Descartes' *Cogito*, Husserl's epoché and Hegel's view of phenomenology.

BARRELL, Joseph. *Shelley And The Thought Of His Time; A Study In The History Of Ideas.* New Haven Yale Univ Pr 1947.

The author asserts that a thorough knowledge of the history of philosophy is an essential to an understanding of literary achievements and indispensable to the literary critic. He uses the life and works of Shelley as illustration of the thesis. He traces the thoughts that dominated the early radical period of the subject and those that influenced his later idealistic trends, primarily to the views of Godwin and Plato, particularly through the eighteenth century classical revival.

BARRETT, William. *Irrational Man; A Study In Existentialist Philosophy.* Garden City NY Doubleday 1958.

The aim of the book is "... not to provide a survey or compendium of Existentialism but rather to deal with the more central question: What is the meaning of Existentialism?" Existentialism is approached through contemporary art and traced back to its sources in the Western tradition—in the Bible, Greek philosophy, Christian thought, and world literature. Instigated by the dissolution of bourgeois society, Existentialism is treated as an important, unparalleled endeavor to understand man. Separate chapters are devoted to the philosophies of Kierkegaard, Nietzsche, Heidegger, and Sartre, to gather and evaluate their insights into the nature of man as well as their contributions to the existentialist movement. The author agrees with the existentialist denial of the proposition that man is merely a rational being, and approves its "attempt to see the whole or integral man," though this "involves our taking a look at some unpleasant things... as death, anxiety, guilt, fear and trembling, and despair."

BARRETT, William. *Time Of Need.* NY Harper & Row 1972.

The author wishes to discover through art the new reality through which we are living. By examining in particular the writings, he characterizes our civilization as a time of need fostered by the increasing prevalence of nihilism and the destruction of the role of myth in human affairs. Artists envision twentieth century man's need as being that of reconciling the conflict existing between human nature and culture.

This biographical study focuses on those years of Wittgenstein's life [1889-1951] which were spent as an elementary school teacher in three small Austrian communities. The author shows that Wittgenstein's experiences in these communities and his implementation of the Austrian School Reform Program dominated by Buhler's psychology were influential in the shift from the thought of the (Tractatus to that of the (Philosophical Investigations. As a consequence of this connection, the author demonstrates that these years were not a time when Wittgenstein had abandoned philosophy. A bibliography of Wittgenstein's writings is also published at the end of the text.

BARTON JR, George E. De Principiis Non Disputandum Est. *School Review* 72,209-229 1964.

Underlying all educational theory are guiding philosophical presuppositions: methods, principles and purposes. Suggested are four generalized categories for analysis: (1) logical (2) dialectical (3) problematic and (4) operational. A basis is thereby provided for studying similarity, diversity and respective comprehensiveness relative to handling common factors. A ground work is thus established for a philosophy of education: not an amalgamated—or eclectic—super-theory of education, but instead a discursive meta-schema enabling philosophical discussion, comparison and evaluation of alternative theories. The criterion for implementing one theory over another as a guiding principle in educational practice remains the kind of educated man it produces.

BASH, Harry H. Determinism And Avoidability In Sociohistorical Analysis. *Ethics* 74,186-200 Ap 64.

Relying on the notion of freedom as avoidability, not as indeterminism, this paper concentrates on the following question in the light of the theories of Karl Mannheim and Karl Marx: "To what extent, if any, may individuals from widely divergent cultural settings be expected to transcend their culture-imposed moral commitments, perceptions, and ideologies and thus broaden their range of choice to the end of achieving cross-cultural ethical agreement?" In the models of the relation of thought to history employed by Marx and Mannheim, avoidability is impossible. The sociohistorical matrix becomes the causal element.

BATTENHOUSE, Roy W. *Marlowe's Tamburlaine, A Study In Renaissance Moral Philosophy.* Nashville Vanderbilt Univ Pr 1941.

This valuable study is the first to relate *Tamburlaine* adequately to its moral milieu in Reformation humanism. First Mr Battenhouse surveys Elizabethan religion and atheism; Raleigh's religion and Chapman's; and Elizabethan views of fortune, fate, providence, punishment, and the moral uses of poetry. Then he anatomizes *Tamburlaine* to show its historical fabric deeply colored by Renaissance moral philosophy, especially by Spenser, Seneca, and Machiavelli. *tamburlaine* preached dramatically on the doom of disordered humours and sinful passions raging "uncontrolled, misdirected, and diseased." Marlowe "differs from his Protestant contemporaries, ... not in his moral outlook, but only in his ability as an artist."

BATTENHOUSE, Roy W. The Doctrine Of Man In Calvin And In Renaissance Platonism. *J Hist Ideas* 9,447-471 O 48.

BAUER, Theodore and others. *Thomistic Principles In A Catholic School.* St Louis Herder 1943.

This symposium attempts an integration of the broad principles of the philosophy of St Thomas Aquinas as reflected in religion, modern philosophy, education, and the sciences.

BAUM, Archie J. The Generic Theory Of Truth. *Personalist* 28,370-375 O—Autumn 47.

The Generic Theory states a genus of which other theories are species: Truth is a property of a believe when what is believed to be, is, etc. Examples of species: Belief that true ideas correspond with real things is true when and because what is believed to be, is. Belief that true ideas cohere with a larger whole is true when and because what is believed to be, is. Belief that true ideas work is true when and because what is believed to be, is. Each belief is conceived in terms of such specifications as are required by its peculiar set of conditions. Unintended specifications are irrelevant. The truth of each belief depends on whether there are whatever specifications are judged to be.

BAUM, Gregory. Primacy And Episcopacy: A Theological Reflection. *Thomist* 27,211-221 Ap—Jl—O 63.

BAUMAN, Zygmunt. *Socialism: The Active Utopia.* Boulder CO Westview Pr 1975.

This book is a critique of the socialist utopia. All "utopian" visions are, the author contends, rather than fanciful aberrations, a measure of the vitality of a society or era. Utopian thinking has been encouraged in the modern age by such factors as the increased tempo of social change, the advance of natural science, and the craving for social order.

BAUMER, F Lanklin, Le Van. *Religion And The Rise Of Scepticism.* NY Harcourt Brace 1960.

Although some observers have reported a revival of religion in recent years, the author of the present work characterizes our century instead as a period of widespread scepticism—qualified, however, by anxiety, as against the jubilant, unworried scepticism of 50 years ago. Thus, the dilemma of modern man is that he wants to return to the womb of religious belief, but the great sceptics—Voltaire, Renan, Freud, and others—all bar his way. The author traces the rise of modern scepticism in four stages: the early modern scientists, the Enlightenment, the Nietzschean pronouncement of the death of God, and the present period of longing for a new faith.

- BAUMER, W H.** Von Wright's Paradoxes. *Phil Sci* 30,165-172 Ap 63.
- BAUMER, William H.** Evidence And Ideal Evidence. *Phil Phenomenol Res* 24,567-572 Je 64.
The author notes that Vincent's refutation of Popper's criticism of a subjective interpretation of probability fails. There is a paradox of ideal evidence; however, the source of this paradox disappears when a certain relationship is made clear. The following is presented: ideal evidence must be taken as supporting an empirical statement (not some logical truth). "A, relative to some empirical statement is probable to the degree 1/2."
- BAUMER, William H.** Ontological Arguments Still Fail. *Monist* 50,130-144 Ja 66.
This is, firstly, substantiation of a protest against the analysis of Kant's criticism of ontological arguments which holds: Kant showed "existence" not to be a predicate; that is enough. The substantiation is obtained by developing interrelations of the three main elements of Kant's criticism: the distinction of real and logical predicates; the analysis of uses of "to be"; the status of concepts of possible and of actual things. This thus shows Kant's criticism to be far more extensive than is frequently supposed. Secondly, this develops the consequences of Kant's criticism for some contemporary attempted ontological argumentation. It is shown that: Kant's criticism succeeds despite the claim that "necessary existence," not "existence," is essential to ontological arguments; the sense of "necessary" here remains problematic; Kant knew perfectly well what he was doing in criticizing ontological arguments; the necessary existence supposedly proved by such arguments is not that allegedly religiously required.

- BAY, Christian.** *The Structure Of Freedom.* Stanford CA Stanford Univ Pr 1958.
This book presents a systematic study of the whole complex of problems connected with the notion of individual freedom in modern Western society. Part One is an analytical section in which the author distinguishes three senses of "freedom," relates them to corresponding senses of "power" and "security," and examines some fundamental questions of philosophical value theory. One chapter in this part carefully compares and contrasts the author's views about freedom, autonomy, and equality with those of the classical utilitarian and idealist philosophers. In Part Two, Bay considers empirical questions and behavioral theory in the social sciences. Three long chapters on the psychological and social determinants of freedom include discussions of such topics as anxiety, self-esteem, mental health, authoritarian personalities, social systems, institutions, laws, and political authority, and the bearing of each on individual freedom. The book concludes with a discussion of the political applications of the author's general theory of freedom.

- BAYLES, Michael D (ed).** *Contemporary Utilitarianism.* Garden City NY Anchor Books 1968.
Starting with J O Urmson's interpretation of J S Mill as a rule utilitarian, this anthology contains ten papers developing that view and criticizing it from act utilitarian and non-utilitarian positions. Among the topics discussed are justice, promise-keeping, and punishment. The other contributors are Jonathan Harrison, John Rawls, J J C Smart, H J McCloskey, Richard B Brandt, Alan Donagan, B J Diggs, and T L S Sprigge.
- BAYLES, Michael D (ed).** *Ethics And Population.* Cambridge MA Schenckman 1976.
This anthology of ten articles concerns moral issues related to population problems. A substantial introduction surveys the problems and the bearing of moral philosophy on them. Part I contains articles by Garrett Hardin, Daniel Callahan, and the editor concerned with freedom and equality in population programs. The articles by Jan Narveson, Peter Singer, and Derek Parfit in Part II concern utilitarian principles and an optimum population size. The papers in Part III address moral issues of birth control—contraception and abortion. The articles and discussions are by Carl Cohen, GEM Anscombe, Peter Winch, Bernard Williams and Michael Tanner, and Richard B Brandt.
- BAYLES, Michael D.** Dismantling The Criminal Law System. *Wayne Law Review* 19,827-846 1973.
This paper is an introduction to a symposium on issues of punishment and responsibility. It provides a framework of four models for a system of punishment and sketches the basic arguments for an against each. It also sketches the implications of the four approaches to the specific problems of insanity, addiction, and preventive detention.
- BAYLES, Michael D.** Legislating Morality. *Wayne Law Review* 22,759-780 1976.
The first half of this paper clarifies the issue concerning the legislation of morality and develops the most plausible legal moralist principle. The second half considers and rejects three different arguments for the principle—the democratic, conformity, and disintegration arguments.
- BAYLES, Michael D.** Singer's Moral Principles And Rules. *Phil Stud* 16,61-64 1965.
This discussion criticizes Marcus Singer's distinction between moral principles and rules by showing that a conflict can be generated between two of his principles.

- BAYLIS, Charles A.** A Criticism Of Lovejoy's Case For Epistemological Dualism. *Phil Phenomenol Res* 23,527-537 Je 63.
- BAYLIS, Charles A.** C I Lewis's Theory Of Value And Ethics. *J Phil* 61,559-566 O 64.
Lewis holds that "Values ascribable to objects are always extrinsic values; intrinsic value attaching exclusively to realizations of some possible value—quality in experience itself". Intrinsic values Lewis designates as "satisfactions" and "dissatisfactions" or "enjoyment" and "suffering." What one ought to do, what it is right to do, is to maximize enjoyment and minimize suffering, taking account of the fact that the intrinsic value of these experiences does not vary with the individual who has them. We need only supplement our knowledge of values by adhering to the principle of prudence: "so act as to maximize your total probable realizations of satisfaction over time," and to the Golden Rule—equivalent to Kant's Categorical Imperative. So to act is to act rationally and justifiably. For it is clear that more intrinsic value is better than less, no matter who experiences it. Lewis is an ethical cognitivist.

- BAYLIS, Charles A.** Universals, Communicable Knowledge, And Metaphysics. *J Phil* 48,636-643 O 51.
The position that there are unchanging characters or universals is presented in this article with the following characteristics: (1) the same character can be thought of again and again, (2) the character can be exemplified repeatedly, (3) certain relations obtain among the characters. This article begins by pointing out problems with nominalism and progresses to an explanation of the author's theory.
- BAYM, Nina.** Thoreau's View Of Science. *J Hist Ideas* 26,221-234 Ap-Je 65.
The thesis of this article is that Thoreau's view of science was not as simple as many critics believe, but contains a complex attitude toward nature and its relation to art. The author focuses on the difference between Thoreau's early view that science must lead to transcendental ends, and his later acceptance of the fact that his approach had failed, ending in his near rejection of science. The role Emerson played in introducing Thoreau to scientific writing is discussed, as well as Thoreau's changing view of the nature of man. The author concludes that near the end of his life Thoreau was unable to accept the approaching conclusion of his work, i.e., the irrelevancy of man in the universe; instead he attacked the enterprise which brought him near to such a distasteful result.

- BEACH, Joseph Warren.** *The Making Of The Auden Canon.* Minneapolis 1957.
The book is devoted to an analysis of the revisions made by Auden in preparing the text of his collected poetry in 1945. Two major reasons for the changes are given: aesthetic considerations, and shifts in Auden's political and theological views. Despite these changes, according to Beach, Auden was unable to present a collection of poems unified in feeling or belief.

- BEARDSLEY, Elizabeth L.** Determinism And Moral Perspectives. *Phil Phenomenol Res* 21,1-20 S 60.
The question is posed: can determinists find a satisfactory rationale for moral praise and blame? The author argues that judgments of moral praise and blame, affirmative as well as negative, can be made within the framework of determinism, provided that one accepts a more complex account of these judgments and their foundations than is ordinarily supplied or assumed. Such judgments are made from several different standpoints, called "moral perspectives," and if these are understood, determinists need not feel uneasy when confronted by the concepts of moral praise and blame.
- BEARDSLEY, Monroe C.** *Aesthetics From Classical Greece To The Present: A Short History.* NY Macmillan 1966.
This volume has twelve chapters dealing with the general aesthetics of the classical, medieval, and renaissance periods, the age of the enlightenment, the age of German idealism and romanticism, and the contemporary period. Each chapter is followed by a select bibliography which lists modern works dealing with significant issues. Beardsley's discussion of Aristotle's famous concept of catharsis illustrates the special value of this work as it offers both traditional and modern interpretations of significant aesthetic concepts. The section on the aesthetic attitude of the medieval age reminds us that Kenneth Burke did not originate the concept of symbolic form. In the section on German idealism the author extracts the important but murky ideas of an age and makes them meaningful to the modern reader by defining terms and integrating ideas in relation to key concepts. The 10st and longest chapter on contemporary developments contains a survey that none of the other histories offer.
- BEARDSLEY, Monroe C.** *Aesthetics: Problems In The Philosophy Of Criticism.* NY Harcourt Brace 1958.
A full analysis of the major problems in aesthetics is here presented. The topics discussed include the following: aesthetic objects, the categories of critical analysis, the nature of a literary work, artistic form, representation in the visual arts, the meaning of music, artistic truth, literature and knowledge, critical evaluation, aesthetic value, and the arts in the life of man. Each chapter is concluded with a set of questions and problems for the student to consider, and each topic discussed is provided with an exhaustive bibliography.
- BEARDSLEY, Monroe C.** *Practical Logic.* NY Prentice-Hall 1950.
- BEARDSLEY, Monroe C.** A Dilemma For Hume. *Phil Rev* 52,28-46 Ja 43.
- BEARDSLEY, Monroe C.** Beauty And Aesthetic Value. *J Phil* 59,617-628 O 62.
This paper affirms the proposition, denied by Albert Hofstadter (*Journal of Philosophy*, Volume 59, 1962), that the study of the meaning and ground of value judgments is a proper branch of aesthetics. Hofstadter objects that the use of 'aesthetic value' involves a "category mistake"; however, this objection is based on an apparent failure to understand a derivative or instrumental definition. Hofstadter's own position is also criticized. It is argued (a) that his theory of aesthetic validity, while commendable in some respects, is too abstract and too general; and (b) that beauty is not a necessary condition of aesthetic value, a proposition strongly objected to by Hofstadter.
- BEARDSLEY, Monroe C.** Dostoyevsky's Metaphor Of The "Underground". *J Hist Ideas* 3,265-290 Je 42.
- BEARDSLEY, Monroe C.** Intrinsic Value. *Phil Phenomenol Res* 26,1-17 S 65.
Beardsley, attacks the proposition that there is such a thing as intrinsic value. Such value would have to be independent of its relation to anything else! The reasons for believing in intrinsic value are given: arguments from definition, from a dialectical demonstration, and an attempt at empirical confirmation. Beardsley concludes that the concept of intrinsic value is inapplicable. Even if something has intrinsic value we could not know it, and therefore it can play no role in ethical or aesthetic reasoning.
- BEARDSLEY, Monroe C.** Mr Burnham On The "Elite". *J Phil* 40,435-440 Ag 43.
- BEARDSLEY, Monroe C.** On Arts And The Definition Of Arts: The Definition Of The Arts (A Symposium). *J Aes Art Crit* 20,175-187 Wint 61.
- BEARDSLEY, Monroe C.** On The Creation Of Art. *J Aes Art Crit* 23,291-304 Spr 65.
- BEARDSLEY, Monroe C.** On The Generality Of Critical Reasons. *J Phil* 59,477-485 Ag 62.
This paper holds the following propositions to be true: (1) The critic does make value judgments of art and does sometimes adequately support these by good reasons; (2) A reason always cites some property of the work, and this property is then employed as a criterion of value by the critic; (3) There are general criteria of evaluation. This is the position that the critical skeptic rejects. He holds that there are no criteria of aesthetic value, and (4)—the General Criterion Theory—is a main target of his attack. The paper examines and answers four arguments against the General Criterion Theory.
- BEARDSLEY, Monroe C.** Representation And Presentation: A Reply To Professor Dickie. *J Phil* 58,238-240 Ap 61.
- BEARDSLEY, Monroe C.** The Aesthetic Problem Of Justification. *J Aes Educ* 1,29-39 Fall 66.

- BEARDSLEY, Monroe C.** The Metaphorical Twist. *Phil Phenomenol Res* 22,293-307 Mr 62.
The purpose of this article is to distinguish a thing-approach and a word-approach to the problem of analyzing metaphor. Beardsley rejects the object-comparison theory of metaphor in favor of the verbal-opposition theory, which he explains and defends. He concludes that the latter explains the acknowledged features of metaphor and makes no assumptions that a sound philosophy of language would be unwilling to grant.

- BEBERMAN, Arleen.** Death And My Life. *Rev Metaph* 17,18-32 S 63.
The author's intent is to decide how much philosophical significance should be granted to death. She first discusses Hegel's view of death as encounter with the other, noting that in the dialectic of mastery and slavery death is negated through work. She then considers Sartre's criticism of Hegel's position before turning to an examination of Camus' novel, *The Stranger*. After discussing philosophical parallels between Camus and Merleau-Ponty, the author argues against Heidegger that unconcern and disbelief are not "inauthentic" but render human existence possible. She concludes with remarks on dying as an ethical act.

BECK, Lewis W. Agent, Actor, Spectator, And Critic. *Monist* 49,167–182 Ap 65.

This article is a continuation of "Psychology and the Norms of Knowledge," *Philosophy and Phenomenological Research*, Volume 14 (1954), pages 494–506. It is argued that the spectator must exempt himself from some of the generalizations he makes about the persons he observes in the laboratory in order to protect his epistemic claims from self-refutation. Some implications for the problem of freedom and for the constitution of a community of objective judges of human affairs are drawn.

BECK, Lewis White. *A Commentary On Kant's Critique Of Practical Reason*. Chicago Univ Of Chicago Pr 1960.

This book is a close textual commentary and critical examination of the second Critique. It also contains a bibliography.

BECK, Lewis White. *Early German Philosophy: Kant And His Predecessors*. Cambridge MA Belknap Pr 1969.

This book presents a compendious history of German philosophy from the beginnings to Kant with discussion of the idea of national histories of philosophy. Emphasis is upon the cultural context of the various philosophers including extensive treatments of Nicholas of Cusa, Leibniz, Wolff, Lessing, Kant, and others.

BECK, Lewis White. *Philosophic Inquiry; An Introduction To Philosophy*. NY Prentice-Hall 1952.

This is a textbook with a broadly pragmatistic and naturalistic orientation. Extensive analysis of hypothetico-deductive method in science and its extension into philosophy and exposition and defence of objective relativism in epistemology are also discussed.

BECK, Lewis White. *Six Secular Philosophers*. NY Harper 1960.

This book deals with religious themes in the philosophies of Spinoza, Hume, Kant, Nietzsche, William James, and Santayana.

BECK, Lewis White. *Studies In The Philosophy Of Kant*. Indianapolis Bobbs-Merrill 1965.

These are reprints of fourteen articles on Kant, two for the first time translated from the German, and one from the French.

BECK, Lewis White. *The Actor And The Spectator*. New Haven Yale Univ Pr 1975.

This book is a review of the Cassirer Lectures at Yale, 1974, with an examination of the common-sense or humanistic view of human nature in contrast to a scientific (e.g., Skinnerian) view. The method followed is that of dramaturgic confrontation of two spectators who give divergent accounts of what they observe in an "actor." There are discussions of mind-body problem, the problem of freedom, rules and causes, motives and causes, and the epistemology of the social sciences.

BECK, Lewis White. Art Criticism And Semantic Discipline. *Delaware Notes* 16,31–53 1943.

A longer and less clear presentation of theory of meaning in art which was published under the title "Judgments of Meaning in Art," *Journal of Philosophy* 41 (1944), pages 169–178.

BECK, Lewis White. Bibliography On Kant's Ethics. *Delaware Notes* 18,23–43 1945.

This article is a bibliography of works on Kant's ethics, largely restricted to works published since the 1924 compilation in Ueberwegs Grundriss der Geschichte der Philosophie.

BECK, Lewis White. Character And Deed. *Phil Phenomenol Res* 4,547–553 Je 44.

Characters and deeds can each be judged along two dimensions, their choiceworthiness and their praiseworthiness. Certain interesting relations are discerned between the positions of characters and actions along each of these independent dimensions, and four formulae are given. Though Nicolai Hartmann's *Ethics* is not mentioned, the paper is written in the spirit of that treatise.

BECK, Lewis White. Concerning Landmann's "Nicolai Hartmann And Phenomenology". *Phil Phenomenol Res* 4,592–594 Je 44.

BECK, Lewis White. Constructions And Inferred Entities. *Phil Sci* 17,74–86 Ja 50.

An inferred entity is always assigned some "surplus meaning" which is lacking in a logical construction. It is argued that only a name for inferred entities, not names for logical constructions, can have a place in synthetic judgments. The importance of this difference in scientific explanations and in the guidance of research into hidden powers and parameters is emphasised.

BECK, Lewis White. Judgments Of Meaning In Art. *J Phil* 41,169–177 Mr 44.

"Meaningful" or "full of meaning" as an aesthetic predicate presents puzzles even in verbal and representational arts. Such a predicate when applied to a non-verbal and non-representational art like music appears definitely paradoxical. Ordinarily meaning is attributed to a medium with both a vocabulary and a syntax. It is proposed that, in the case of music, meaning exists only in the syntactic, not the semantic, mode. Some consequences for the other arts are drawn from this extreme case.

BECK, Lewis White. Kant's Letter To Marcus Herz, February 21, 1772, I: Introduction. *Phil Forum (Boston)* 13,96–102 1955.

BECK, Lewis White. Kant's Theory Of Definition. *Phil Rev* 65,179–191 Ap 56.

There is a widespread misinterpretation of Kant according to which an analytic judgment is one that follows from a definition. Through a study of Kant's theory of definition, and the role in knowledge that he ascribes to definition, it is shown that this is indeed a misinterpretation. Much criticism of Kant's theory of analytic judgments is vitiated by substituting a modern definition of "analytic" for the one Kant gave.

BECK, Lewis White. Nicolai Hartmann's Criticism Of Kant's Theory Of Knowledge. *Phil Phenomenol Res* 2,472–500 Je 42.

This article is a historical narrative and philosophical evaluation of Nicolai

Hartmann's articles and book *Grundzuege einer Metaphysik der Erkenntnis* (1925) in which he gradually distanced himself from Kant and from Marburg neo-Kantianism.

BECK, Lewis White. On Professor Margenau's Kantianism. *Phil Phenomenol Res* 11,568–573 Je 51.

This article is an examination of the relationship between Marburg neo-Kantianism and "The Nature of Physical Reality" by Henry Margenau. It is argued that Margenau does not properly differentiate between actual experience and possible experience in the verification of present conjectures.

BECK, Lewis White. Philosophy In War Time. *J Phil* 39,71–75 Ja 42.

This article is an appeal to American philosophers that they try to maintain a higher degree of impartiality and objectivity in treating German philosophers and works of German philosophy than they did in World War I.

BECK, Lewis White. Potentiality, Property, And Accident. *Phil Rev* 56,613–630 N 47.

An ontological theory is proposed to support the epistemological theory of objective relativism defended in "Secondary Quality," *Journal of Philosophy*, Volume 43 (1946), pages 599–610. This is a general theory of relational qualities as actualizations of potentialities. Systematic and real existence are distinguished. The ontological principle is defended that every real existent possesses an accident.

BECK, Lewis White. Remarks On Mrs Hess's "One Word More". *J Phil* 41,520–521 S 44.

BECK, Lewis White. Remarks On The Distinction Between Analytic And Synthetic. *Phil Phenomenol Res* 9,720–727 Je 49.

This article is a criticism of John Wild and J L Cobitz's, "On the Distinction between the Analytic and the Synthetic," in same journal, Volume 8, (1948), pages 661–667. The authors are charged with serious misunderstanding of Kant's text. A comprehensive table is presented showing the interrelations of Kant's usages of the terms "analytic," "synthetic," "a priori" and "a posteriori." The paper concludes with a discussion of the role of intentionality in Kant's epistemology and in phenomenology.

BECK, Lewis White. Reply To Mrs Hess's "Mr Beck's 'Judgments Of Meaning In Art'". *J Phil* 41,516–518 S 44.

BECK, Lewis White. Secondary Quality. *J Phil* 43,599–609 O 46.

This article is a defence of a theory of objective relativism with respect to the secondary qualities of perceptual objects. A criticism of naive realism and of Locke's theory and a defence of a pragmatistic account of the distinction between appearance and reality is also included.

BECK, Lewis White. Self-Justification In Epistemology. *J Phil* 45,253–259 My 48.

This article is a continuation of "The Psychophysical as a Pseudo-problem," *Journal of Philosophy*, Volume 37 (1940), pages 561–571. Categorical differences between mind in the mind-body and mind in the mind-object contexts are explored. Constraints are imposed upon the psychophysical relation with a view to making the mind-object relation intelligible. Only within these constraints could a true psychophysical theory be known to be true.

BECK, Lewis White. Strategy In Social Science Research. *Georgia Review* 6,332–341 1952.

This article is a continuation of "The Natural Science Ideal in the Social Sciences," *The Scientific Monthly* 48 (1949), 386–395. The problem of bias and its elimination is discussed. The peculiar relation between pure and applied science, so well established in the natural sciences, is problematic in the social sciences. Some successful strategies in the natural sciences, therefore, cannot be adopted in the social sciences.

BECK, Lewis White. The 'Natural Science Ideal' In The Social Sciences. *Scientific Monthly* 48,386–395 Je 49.

The social scientist, in attempting to emulate the natural scientist, has often used a worn-out model of the natural sciences as his ideal. Newer interpretations of the methodology of the natural sciences may serve as better models for the social scientist.

BECK, Lewis White. The Distinctive Traits Of An Empirical Method. *J Phil* 44,337–343 Je 47.

BECK, Lewis White. The Formal Properties Of Ethical Wholes. *J Phil* 38,5–14 Ja 41.

This article is an examination of Moore's theory of "organic unities." Other examples of wholes whose value exceeds that of the sum of the values of their parts are examined, and some ontological and structural features of such wholes are examined.

BECK, Lewis White. The Limits Of Skepticism In History. *South Atlantic Quarterly* 49,461–468 O 50.

A paradox in historical relativism (as a form of skepticism) arises from the generalization of the fact that the report of an historical event reflects the time, personality, purpose, bias, etc of the historian. This empirical fact, when completely generalized, must extend also to our present historical knowledge of the past historical event of an historian's writing of history. Why the historical relativist should confess to subjectivity in accounts of all historical events except "historiographical events" is a puzzle and constitutes a limit to historical skepticism.

BECK, Lewis White. The Principle Of Parsimony In Empirical Science. *J Phil* 40,617–632 N 43.

BECK, Lewis White. The Psychophysical As A Pseudo-Problem. *J Phil* 37,561–571 O 40.

Certain aspects of the psychophysical problem are paradoxical because of failure to separate the problems of two relations, the relation of mind to body and the relation of mind to object of knowledge. It is essential not to formulate a theory about one of these relations which would make it impossible to give an explanation of the other. It is argued that most psychophysical theories fail to meet this requirement.

BECK, Lewis White. William Stern's Philosophy Of Value. *Personalist* 22,353-363 O-Autumn 41.

This article is an exposition of the theory of value of William Stern (1871-1938), based primarily on his *Wertphilosophie* (1924), the third volume of his *Person und Sache*.

BECK, Lewis W. Psychology And The Norms Of Knowledge. *Phil Phenomenol Res* 14,494-506 Je 54.

This article is a continuation of "Self Justification in Epistemology," *Journal of Philosophy*, Volume 45 (1948), pages 253-60. It is argued that the psychophysical relation is always known in, and indeed is a limiting case, of the cognitive relation of mind to object. By analysis of an experiment on perceptual illusion it is shown how the experimental psychologist has to limit and discount the cognitive claims of a perceiver in order to determine the psychophysical causal relations effective in perception.

BECK, Lewis W. Sir David Ross On Duty And Purpose In Kant. *Phil Phenomenol Res* 16,98-107 S 55.

Kant's *Ethical Theory* by Sir David Ross (1954) contains such gross misinterpretations of Kant's examples in the "Foundations of the Metaphysics of Morals" that the book is seriously misleading as an exposition and criticism of Kant's ethics. The article criticizes Ross for committing grave textual errors and for neglecting the purposes Kant had when he formulated the notorious examples. It is argued that the examples are mere Gedankenexperiments and are not models for emulation.

BECK, Robert N. *The Meaning Of Americanism: An Essay On The Religious And Philosophic Basis Of The American Mind*. NY Philosophical Lib 1956.

Winner of a national essay contest on the religious and philosophic basis of Americanism, this study provides an historical-philosophical examination of the basic assumptions of the American experience. The historical materials are largely descriptive; the philosophical are evaluative. After examining the meaning and problem of Americanism, the book examines successively the issues of the common good, law, public opinion, and justice. Throughout these chapters, the influence of an interpretation of Lockeianism on the American experience is noted in some detail. At the same time, however, the Lockeian inheritance is subjected to a critique on the basis of social personalism.

BECK, Robert N. "The Philosophical Concept Of Enlightenment" in *The Ibero-American Enlightenment*, A Owen Aldridge (ed), 58-70. Urbana 1971.

Starting with Immanuel Kant's characterization of Enlightenment, this essay examines critically the Enlightenment view of reason. The chief characteristics of that view include reason as calculation, subjectivism, formalism, and functionalism. It is noted that the implication of these characteristics, particularly the alienation of reason and reality and world alienation, is taken to be that, along with the successes of Enlightenment thought, the Enlightenment in fact failed miserably.

BECK, Robert N and Lee, Dwight E. *The Meaning Of Historicism*. *Amer Hist Rev* 59,568-577 1954.

Since the word historicism has become increasingly important in twentieth century thought, this article seeks to examine the fundamental meanings and positions falling under the label. The chief uses uncovered include: (1) explanation or evaluation by means of history; (2) historicization of life; (3) historicization of philosophy; (4) historical relationism and relativism; and (5) historical prediction. It is noted that not all of these meanings are consistent with each other, and we therefore suggest two brief definitions of the term: first, the belief that the truth, meaning, and value of anything is to be found in its history; and second, the antipositivistic view that historical knowledge is a basic requirement for understanding the human condition.

BECK, Robert N. Descartes's *Cogito* Reexamined. *Phil Phenomenol Res* 14,212-220 D 53.

The purpose of this paper is to reexamine the essential features of the *Cogito* argument, to note some well-known criticisms made of it, and to suggest a fairer evaluation of the Cartesian contribution. The interpretation offered is that the *Cogito* is an implication, to be sure, but one that is experienced rather than concluded from an inference. Thus the *Cogito* is seen to have an experiential basis and a number of traditional criticisms are shown to be invalidated in the light of this interpretation.

BECK, Robert N. Hall's Genetic Psychology And Religious Conversion. *Pastoral Psychology* 16,45-51 1965.

G Stanley Hall attempted to produce a genetic and, in some senses of the word, subjective understanding of religion. Influenced by an interpretation of the theory of evolution, he argued that every child repeats the history of the race in its religious development. Conversion experiences, which Hall linked primarily to adolescence, are interpreted as involving a change from egoism to altruism in the discovery of a new and complex moral world. Powerful as his evolutionary explanation was, this study concludes that Hall's theories are not really available to the philosopher or theologian for the evaluation of religious experience.

BECK, Robert N. Is Philosophy Practical? *School And Society* 67-69 2 Ag 52.

This brief study examines one of the classical criticisms of philosophy, namely, its "impracticability." Three of the reasons for this charge are examined: unfortunate teaching of the field, failure to appreciate the philosophic task, and the ambiguity of the word "practical." The reply to these criticisms centers around the relationship and contribution of philosophy to liberal education and the values of the liberal mind.

BECK, Robert N. Let Us Liberalize Liberal Education. *School And Society* 3-4 3 Ja 53.

Assuming that liberal education has an important intrinsic value, this article is organized dialectically to cover three approaches for achieving the liberal goal. The thesis is classical liberal education, judged as limited because of its concentration on finding proper subject matters; the antithesis is scientism, also judged inadequate because of its emphasis on scientific utility, and the synthesis proposed is an ideal of liberal education to be accomplished by a "liberal method" applied to a variety of subject matters. Concentration on liberal method, it is concluded, provides a basis for understanding both the means and ends of liberal education.

BECK, Robert N. Our Acquaintance With Reality. *Rev Metaph* 10,73-81 S 56.

This is a review-article based upon William Earle's *Objectivity* (New York: The Noonday Press, 1955). Four topics are selected for critical examination: Subject, Thought, Object, and Reality. Fundamental to Earle's position on these topics is the assertion that "truth is identical with cognitive awareness." This proposition, together with the four topics, is critically examined in terms of the counterassertion that "objects" do have their role in the given, but any intuitive extension of the given beyond immediate consciousness is invalid. Objectivity is not had by finite.

BECK, Robert N. Philosophy, Commitment, And Their Institutional Setting. *University Of Dayton Review* 11,69-76 1974.

The argument of this paper seeks to support the somewhat traditional notion that a university must be neutral relative to the outcome of inquiry. But it turns out that the expression, "neutral university," can be a misleading shorthand for a complicated position. In fact, the notion of neutrality turns out to involve a number of specific commitments, including the value of neutrality itself, the values presupposed by inquiry and professional standards governing the methods of inquiry. Thus, in accepting the notion of university neutrality, one is not being value neutral, but is in fact accepting critically important value commitments.

BECK, Robert N. Rationalism And Personalism. *Phil Forum (Boston)* 15,56-60 1957.

BECK, Robert N. The Strife Of Cognitive Values. *Personalist* 36,141-146 Spr-Apr 55.

Naturalism and idealism are compared in this study with particular reference to their respective theories of cognitive values. Idealistic theories, it is argued, are rooted in a fundamental notion of intelligibility. This in turn suggests that truth is an ideal and that knowledge is always oriented toward value. Naturalism, on the other hand, asserts that genuine knowledge is that warranted by scientific method. The critical implication drawn from this position is that the choice of values therefore cannot be a matter of reflective thought.

BECK, Robert N. What Is There? *J Phil* 54,217-222 Ap 57.

Taking a thesis from Frederic B Fitch's "The Reality Of Propositions" *The Review of Metaphysics*, Volume 9 (1955), pages 3-13, namely, that propositions exist, this article discusses three questions: his argument for the existence of propositions, its significance, and the ontology resulting from his view. Central to the questions is 'exist', and the study concludes that Fitch is correct in asserting that propositions exist. But this is because 'exist' is a vacuous term apart from some criterion or context of use. Thus, there is no problem in saying that abstract entities like propositions exist; rather the problem is how these entities are related to what is expected as existents in justifiable ontological uses.

BECK, Robert. Perception Of Individualism In American Culture And Education. *Educ Theor* 11,129-145 Jl 61.

BECK, Samuel J. Implications For Ego In Tillich's Ontology Of Anxiety. *Phil Phenomenol Res* 18,451-470 Je 58.

BECK, Stanley D. *The Simplicity Of Science*. Garden City NY Doubleday 1959.

These are papers on Kant reprinted chiefly from *The Monist*, volume 51, numbers one and three. "Recent Work on the Philosophy of Kant" by M J Scott-Taggart is an expansion of an article with the same title from *American Philosophical Quarterly*, volume 3 (1966). Previously unpublished papers by H J Paton, Gerd Buchdahl, and R E Butts are included. "The Kantian Theory Of Space in the Light Of Groups Of Transformations" by Jules Vuillemin is translated into English for the first time.

BECKER, Ernest. *Beyond Alienation: A Philosophy Of Education For The Crisis Of Democracy.* NY Braziller 1967.

A "companion piece" to the author's *The New Unified Science of Man: A History and Theory*, this offers a solution to the problem of the fragmentation of human knowledge—a problem that reaches back through the history of America and the Middle Ages to the sources of civilization. It critically discusses the efforts of conservatives and progressives in modern education to solve the problem.

BECKER, Ernest. *The Denial Of Death.* NY Free Pr 1973.

BECKER, Ernest. *The Structure Of Evil: An Essay On The Unification Of The Science Of Man.* NY Braziller 1968.

Becker proposes a convergence of ideas from psychology, social psychology, sociology, psychiatry, history and philosophy into a synthetic theory of alienation as the foundation of a science of man, critical, naturalistic anthropodicy conceived as a superordinate value science. This unified science of human significance, Becker contends, can reestablish a critical ideal—typology of progress and serve the increase of well being in the human community, to be accomplished by the abandonment of the separation of fact and value, itself made necessary by the recognition of man's nature as *Homo poeta*, Man the Creator of Meaning. The role of the social bond in self-esteem maintenance is seen as the root principle of the anthropodicy since "the founding of a science is never a cognitive problem alone: it is always inseparably a moral problem.

BECKNER, Morton. *The Biological Way Of Thought.* NY Columbia Univ Pr 1959.

Professor Beckner believes that not enough attention has been given to biological concepts by philosophers of science. In particular, he wishes to defend "the biological way of thinking" and to elaborate the position and methodology of organismic biology. Organismic biologists claim that we must give attention to levels of organization and relations above the physical—chemical, to the directiveness of organisms, and to the historicity of organic systems. Biology is an autonomous science in the sense that it develops its own concepts and laws. But the types of concepts and explanations it employs—functional or teleological, polytypic, historical or genetic—are continuous in general with the logic of explanation employed in the other sciences. In the course of his analysis Beckner also treats the logic of model explanations, taxonomic systems, explanatory or selection theory, and holism versus reductionism.

BECKWITH, Burnham Putnam. *Religion, Philosophy, And Science: An Introduction To Logical Positivism.* NY Philosophical Lib 1957.

BEDAU, Hugo A. Must We Accept The Coherence Theory? *Phil Forum* (Boston) 11,34–36 1953.

BEDAU, Hugo A. On Civil Disobedience. *J Phil* 58,653–664 O 61.

The first part of this paper develops a definition of civil disobedience. Anyone, the author suggests, commits an act of civil disobedience if and only if he acts illegally, publicly, nonviolently, and conscientiously with the intent to frustrate (one of) the laws, policies, or decisions of his government. The second part of the paper takes up the problem of justifying civil disobedience. In general, the author asserts, there is no principle by which to identify the necessary and sufficient conditions under which resistance to government is justified. Moreover, among the various forms of resistance, one cannot grant a privileged status to acts of civil disobedience until there are actual experiments in civil disobedience, resolving a battery of disputed empirical questions.

BEDELL, George C. *Kierkegaard And Faulkner: Modalities Of Existence.* Baton Rouge 1972.

In this book, the author uses Kierkegaard's modalities of existence, e.g., the aesthetic, the ethical and the religious, to interpret characters in the novels of Faulkner. In discussing the views of time of both Kierkegaard and Faulkner, we are led to the religious modality exhibited by Dilsey, Faulkner's only heroine of faith.

BEIS, Richard H. Contraception And The Logical Structure Of The Thomist Natural Law Theory. *Ethics* 75,277–284 Jl 65.

Contrary to the official stance of the Catholic church, Thomist natural law does not imply that contraception is intrinsically evil. Natural law theory, in fact, is inconsistent with the idea that contraception is intrinsically evil and "may even demand the practice of contraception." One key to this reinterpretation of Thomist ethics lies in understanding that this naturalistic theory is concerned with the relationalization of human nature as a whole. Thus such factors as world population and marital strains are not extrinsic to the determination of the morality of contraception.

BELAIEF, Gail. The Relation Between Civil Law And A Higher Law: A Study Of Spinoza's Legal Philosophy. *Monist* 49,504–518 Jl 65.

Spinoza's claim that civil law has a moral end is provisionally substantiated by an analysis of his notion of the function of law. The conditions necessary for a law to be valid indicate that, although civil law must conform to the conditions embodied in the natural law of human beings, both just and unjust laws may be valid. Spinoza then attempts to justify evil laws by an appeal to their moral function as part of a valid legal system, but his principles allow the possibility of an unjust legal system that has no value either in itself or in helping the state achieve the moral emendation of the individual. There is then in Spinoza's theory no intrinsic connection between civil law and the achievement of morality; although there is a necessary relation between civil law and natural law this relation does not guarantee material justice.

BELAIEF, Lynne. Toward A Concept Of Human Identity. *Phil Today* 10,109–118 Sum 66.

BELAIEF, Lynne. Whitehead And Private-Interest Theories. *Ethics* 76,277–286 Jl 66.

A "philosophically tenable" ethics can be drawn from certain metaphysical and religious doctrines of Whitehead. This ethics would not be reducible to aesthetics; nor would it be a private interest theory. A common basis in freedom and creativity need not imply that moral values have an aesthetic content as opposed to an aesthetic element. The fact that all acts, according to Whitehead, spring from some subjective interest or desire need not imply that they are selfish or self-interested. Whitehead's ethics would be one of self-realization within a society, where self-realization is not equated with self-regard.

BELEW, Pascal P. *The Philosophy Of Providence.* Butler IN Higley 1955.

BELKIN, Samuel. *In His Image: The Jewish Philosophy Of Man As Expressed In Rabbinic Tradition.* NY Abelard shuman 1960.

Describing Judaism as a democratic theocracy, the author shows how that concept and its twin elements, the sovereignty of God and the sacredness of the individual, have constituted the basis of Jewish ethical and religious teachings. His summary of those teachings is organized in such categories as "Man: His Intention, Word and Action," "Man and His Family," "Man and Public Consciousness," "The Sacredness of Human Life," and "Man and the Higher Law." Copious short quotations illustrate the general themes and subthemes.

BELL, Charles G. Mechanistic Replacement Of Purpose In Biology. *Phil Sci* 15,47–51 Ja 48.

BELL, Daniel. *The Cultural Contradictions Of Capitalism.* NY Basic Books 1976.

Part I sketches the split between culture and the social structure, how and why "modernism" undermines the moral foundations of the West in the Protestant Ethic. Part II considers the structure of polity, the transient complement of religion and culture, the mundane, difficulties of everyday living.

BELL, Daniel. The "Rediscovery" Of Alienation: Some Notes Along The Quest For The Historical Marx. *J Phil* 56,933–951 N 59.

BELL, David R. *Bertrand Russell.* Valley Forge PA Judson Pr 1972.

The book is devoted mainly to an elementary outline of Russell's discoveries in logic and their bearing on his philosophy. The discussion is prevented from being detailed by the limits as to space which the format of the series imposes. There are also chapters on his life and his ethical outlook and a selected bibliography, all very short.

BELL, E. T. *The Development Of Mathematics.* NY McGraw-Hill 1940.

This book has been written primarily for practicing mathematicians who are interested in learning something of the major trends and episodes in the development of their discipline and of the way in which current mathematical concepts and techniques have come into being. They will find in it not only an engrossing story of important stages in the construction of mathematical methods; they will also find a clear survey of the development of mathematical logic from its origins down to the present day and, what is perhaps even more valuable, an intelligible account of the

influences which technical problems of mathematics have exercised upon the direction of logical inquiry.

BENACERRAF, Paul. Tasks, Super-tasks, And The Modern Eleatics. *J Phil* 59,765-784 N 62.

This paper discusses J F Thomson's arguments (*Analysis*, Volume 15, 1954) that it is logically impossible to perform an infinite number of tasks (a "super-task"). It is argued that Thomson's arguments fail to establish their conclusion, because in each case these arguments depend on an analogy which does not hold. The paper finds two obstacles to proving the logical impossibility of super-tasks which, if correct, would go a long way toward explaining why Thomson is so successful in showing that arguments for the performatibility of super-tasks are invalid and why nevertheless his own arguments against their possibility suffer the same fate.

BENACERRAF, Paul. What Numbers Could Not Be. *Phil Rev* 74,47-73 Ja 65.

In reviewing the essentials of a logicist analysis of number it is noted that no analysis identifying numbers with particular sets is "correct" to the exclusion of other analyses, which identify the numbers with different sets. But if the sense of, e.g., "three" determines its reference, and at least two analyses of "three" are equally "correct" but assign it two different sets as its referent, then the condition in the analyses that states that three is a set is a superfluous one, and numbers couldn't be sets at all. In a final section it is suggested that by substituting the word "object" for the word "set" a similar argument arises which can then be used to refute the identification of numbers with any given system of objects: to characterize the numbers is to characterize not a system of objects but an abstract structure which many systems of objects might exhibit.

BENDALL, Kent and Ferre, Frederick. *Exploring The Logic Of Faith, A Dialogue On The Relation Of Modern Philosophy To Christian Faith*. NY Association Pr 1962.

Writing successive sections in response to each others' contentions two philosophers concern themselves with exploring the conditions under which theological claims (and, in particular, Christian claims), to knowledge would have cognitive value. The knowledge-value of the language of faith, the nature of religious language, and the claims of genuine philosophical inquiry are analyzed with a view to discovering an interplay that would be fair to each in the quest for truth.

BENDITT, Theodore M. "Authority And Authorization" in *Authority: A Philosophical Analysis*, R Baine Harris (ed). University Univ Of Alabama Pr 1976.

State authority and individual autonomy are shown to be compatible when authority is thought of not in terms of some people having authority over others, but rather of someone having the authority to do certain things by virtue of being authorized to do them. It is argued that in this sense of authority, authority sufficiently broad for the functioning of a state is compatible with individual autonomy.

BENJAMIN, A Cornelius. *Operationism*. Springfield IL Thomas 1955.

Operationism in its present form has developed from P W Bridgman's *Logic of Modern Physics*. It has its roots in historical empiricism and pragmatism, and it has been extended beyond physics to psychology and sociology. Since Bridgman has offered several versions of the doctrine, and since there is no definitive agreement among those who use "operationist" procedures, there is need of self-conscious generalization of the theory as well as of clarification and criticism of it. Professor Benjamin sets forth the general problem of operationism, distinguishes the empirical and pragmatic elements in Bridgman, describes the extension of the theory to other fields of investigation, criticizes the ambiguity arising in regard to the several kinds of operations recommended, and presents a generalized theory whose open symbols gain in predictability as they lose in semantic clarity (analogously to the "indeterminacy" principle of Heisenberg).

BENJAMIN, A Cornelius. *Science, Technology, And Human Values*. Columbia 1965.

This book is explicitly directed toward alleviating the lack of understanding between the "two cultures." From the author's point of view, what is most important for communication between scientist and nonscientist, yet least understood by laymen, and even scientists themselves, are the methods, logical structure, and basic motivations of science. Consequently, more than half the book is devoted to philosophy of science. Among the topics discussed are observation, classification and ordering of facts, experiment, measurement, and symbolization. Especially stressed by the author are the conventional elements in science, the ways in which science is nondescriptive, the tentative nature of scientific theories, the tension between theory and fact, and the view that scientific explanations are not shown true or false but only confirmed or disconfirmed to various degrees. The remainder of the book examines science in its social context, and in particular its relation to and effect upon the humanities. The author discusses the values involved in the scientific enterprise.

- BENNE, Kenneth D.** *A Conception Of Authority: An Introductory Study*. NY Columbia Univ 1943.
- Dr Benne limits himself to an analysis of authority in its fundamental generic meaning and its major contexts. He discusses expert authority, rule-authority, pedagogical authority, "external and internal authority," and the differing concepts of authority, power, and coercion. Authority in general he defines as "a triadic relationship between subject, bearer, and field." There must be a wielder of authority, exercising it within a domain of relevance and with a collaboration that implies not merely receptivity on the part of a "subject" but "willing consent."

- BENNETT, Daniel C** and Collins, Arthur W. Jonathan Bennett On Rationality: Two Reviews. *J Phil* 63,253-266 My 66.
- Rationality can be investigated, first, via the contrast: rational-irrational and, second, via the contrast: rational-nonrational. Bennett's account suffers because he adopts the second approach exclusively. To bridge the rational-nonrational gap conceptually, he starts from the "language of the bees" and tries to construct rational bees through a series of improved imaginary species. Mistakenly supposing that we understand what real bees do and using causal explanations and stimulus response patterns, he tries to confer on them some power that will not be explicable in these terms. This leads to unpalatable doctrines on "evidence" and on the relationships between sensory states and the causes and meanings of utterances.
- BENNETT, Daniel.** Action, Reason, And Purpose. *J Phil* 62,85-95 F 65.
- By way of an attempt to analyze the structure of purposive causing the article asks—how do intention and reason modify agency to yield our basic idea of action? Differentiating what he calls the "causal thesis," the "entailment thesis" and the "teleological thesis," the author argues that causing an object to have some property purposively is, like causing rationally and causing intentionally, "apparently translucent." He then tries to account for the apparently "translucency" of causing purposively and, by using Aristotle's notion of the practical syllogism as a model, suggests as an hypothesis that all intentional and rational causing is purposive causing. He concludes, however, that the practical syllogism, i.e., the relation of purposiveness, does not hold unless it is true that the agent acts.

- BENNETT, H Stanley.** The Scope And Limitations Of Science. *Zygon* 3,343-353 S 68.
- BENNETT, J.** *Rationality: An Essay Towards An Analysis*. NY Humanities Pr 1964.
- In the spirit of recent analytic investigations, Bennett seeks to analyze the concept of rationality. He approaches this topic by first considering the behavior of honey-bees, which he claims is non-rational. Using this as a model he examines variations that more closely approximate the linguistic manifestation of rationality. Bennett's most interesting thesis is that while language is necessary for rationality, the possession of language is not sufficient for rationality. A good deal of familiar ground is covered here and while Bennett has many novel insights, there seems to be little genuine advance over the work of the later Wittgenstein and his followers.

- BENNETT, Jonathan.** Substance, Reality, And Primary Qualities. *Amer Phil Quart* 2,1-17 Ja 65.
- It is almost universally assumed that Locke's view of "reality" as lying beyond the veil of perception is logically connected with, and perhaps even equivalent to, the view which he may have held about the instantiation of properties, namely that they are upheld by a substratum substance. These two theories are totally distinct answers to totally distinct questions. The conflation of them goes with an absurd

tendency—encouraged by Locke's use of "idea"—to conflate the properties of things with the sensory states we have when we perceive them. Locke's theory of primary and secondary qualities is usually taken as relevant to phenomenalism or idealism, i.e., as showing that Locke was a phenomenalist about secondary qualities and a realist about primary qualities. This is wrong too, as can be seen when we see what truth there is in Locke's doctrine about primary and secondary qualities.

- BENNETT, Joseph D.** *Baudelaire, A Criticism*. Princeton NJ Princeton Univ Pr 1944.
- Mr Bennett's book emphasizes Baudelaire's opposition to naturalism, scientism, democratic optimism. The author, in agreement on many points with Miss Margaret Mespoulet's beautiful introductory essay to her recently published selection of Baudelaire's prose works, equally stresses the influence of De Maistre on the poet. A basic credo of Baudelaire would be: "Out of the denial of the Demonic, a demon is hatched." In other terms, if you do not believe in the devil, you become a part of him. Hence the paradox in man: Good struggles with Evil, and there are flowers of Evil. In his insistence on paradox, Baudelaire agrees essentially with Kierkegaard and Dostoevski, according to Mr Bennett.

- BERGER JR, Harry.** The Ecology Of The Mind. *Rev Metaph* 17,109-134 S 63.
- The author defines "cultural" or "mental ecology" as the study of mind in relation to its environment. Asserting that culture arises in response to the mind's desire for order, he first introduces the dangers of intellectual presumption and despair. He then investigates the relationship between mind and reality, comparing his position on ecological method with Hegel's and Ortega's views on self and other. He further discusses cultural projection and the principle of self-limitation in light of Plato's use of myth. Finally, the author compares his approach to cultural history with the "new criticism" which stresses the work's autonomy.

- BERGGREN, Douglas.** The Use And Abuse Of Metaphor, I. *Rev Metaph* 16,237-258 D 62.
- The author presents a theory of metaphorical tension and argues that while creative thought in the arts, the sciences, and metaphysics is inescapably metaphorical, the tendency to transform metaphor into myth is no less prevalent. Drawing on analyses proposed by Black, Turbayne, Wheelwright, Beardsley, and Frye, he first formulates a definition of metaphor and discusses its cognitive import and its relation to myth. He then investigates the meaning and truth of poetic schemata and textures and of scientific models and theories. Finally, the author argues that literal monism and dualism are equally indefensible and that metaphysics must be vitally metaphorical.
- BERGGREN, Douglas.** The Use And Abuse Of Metaphor, II. *Rev Metaph* 16,450-472 Mr 63.
- The author presents a theory of metaphorical tension and argues that while creative thought in the arts, the sciences, and metaphysics is inescapably metaphorical, the tendency to transform metaphor into myth is no less prevalent. Drawing on analyses proposed by Black, Turbayne, Wheelwright, Beardsley, and Frye, he first formulates a definition of metaphor and discusses its cognitive import and its relation to myth. He then investigates the meaning and truth of poetic schemata and textures and of scientific models and theories. Finally, the author argues that literal monism and dualism are equally indefensible and that metaphysics must be vitally metaphorical.
- BERGMAN, Hugo.** Brentano On The History Of Greek Philosophy. *Phil Phenomenol Res* 26,94-99 S 65.
- This article examines Brentano's general attitude toward philosophy, especially as a science. It elucidates four phases in Greek Philosophy, as well as in any epoch; these are: ascending, popularizing, skeptical, and mystical. The article ends by attempting to show that Brentano attempted to search for laws even in history and the history of philosophy, and actually thought of philosophy as a lawful development.
- BERGMANN, G.** Some Comments On Carnap's Logic Of Induction. *Phil Sci* 13,71-77 Ja 46.
- BERGMANN, Gustav.** *Meaning And Existence*. Madison 1959.
- BERGMANN, Gustav.** *Philosophy Of Science*. Madison 1957.
- The first chapter dealing with "foundations" presents some of the basic concepts of logic and the philosophy of language. Among those discussed are the analytic-synthetic distinction (all philosophical propositions are analytic or "purely verbal,") quantification, deduction, and the distinction between proper names and definite descriptions. The concept of an axiomatized formal system is introduced, and the function of numbers in the language of science is discussed briefly. In the second chapter scientific explanation is examined with celestial mechanics serving as a paradigm. His analysis of psychology is largely "behavioristic." The final chapter attempts a structural account of the development of the philosophy of psychology. It contains an analysis of "reductionism" and the alleged arguments against it.

- BERGSTRAESSER, Arnold (ed).** *Goethe And The Modern Age*. Chicago Regnery 1950.
- The many facets of the mind of Goethe are reflected in the depth and variety of the contributions made to the 1949 International Convocation held at Aspen, Colorado. As Walter Paepcke says in the Foreword, "In his life and in his work, Goethe represented the universality rather than the specialization of knowledge; humanity rather than the nation; the dignity of the individual rather than the power of the state. It seemed, therefore, particularly appropriate to celebrate the bicentennial of Goethe's birth and to reconsider his philosophy and message from the standpoint of today." A symposium on ethics and politics strikes a significant keynote in its emphasis on the paramouncy of ethics.

- BERKSON, I B.** *Preface To An Educational Philosophy.* NY Columbia Univ Pr 1940.
A discussion of the function of education in contemporary American society and the main social and political problems which education must face if it is to become an effective contributor to desirable social change. The author is in fundamental agreement with the Progressive or Reconstructionist educational philosophy, that is, he is controlled by the comprehensive ideal of changing the method and content of education to the end of strengthening and deepening all democratic forces in American life.
- BERKSON, I B.** *The Ideal And The Community.* NY Harper 1958.
The author conceives the philosophy of education as "the correlation of an ethics and a politics." Taking the views of John Dewey and William H Kilpatrick as his "point of departure," he seeks to revise the experimentalist philosophy of education by substituting for its "biological" approach a historical-cultural orientation which "places institutional achievements and the enduring ideals of civilization at the center of consideration."

- BERLEANT, Arnold.** *The Aesthetic Field: A Phenomenology Of Aesthetic Experience.* Springfield IL Thomas 1970.
This book develops the outlines of a theory that treats the problems of aesthetics without allegiance to outside doctrines or systems. Its theme is that the roots of aesthetic theory must draw sustenance from aesthetic experience. Successive chapters examine how theoretical accounts typically have distorted aesthetics by acting as surrogates for genuine explanations, how the notion of an aesthetic field offers an alternative to such approaches, and how a descriptive analysis of aesthetic experience may dispel some of the traditional problems of aesthetics, including those raised by critical judgment.
- BERLEANT, Arnold.** A Note On The Problem Of Defining 'Art'. *Phil Phenomenol Res* 25,239-241 D 64.
This paper proposes that rather than beginning with a definition of art which is then tested against examples, we start with the phenomena of art and the experiences by which they are known. This corrects the tendency to judge art by a concept rather than developing conceptual and theoretical constructs that respond to the open and changing character of art. The problem of definition is really one of the description and clarification of the experiences of art.
- BERLEANT, Arnold.** Artists And Morality: Toward An Ethics Of Art. *Leonardo* 10 Sum 77.
Three distinguishable types of moral demand may be placed on the artist. First there are those that are held to apply to everyone as a moral being and therefore apply equally to the artist. Second there are those that apply particularly but not exclusively to the artist as a social participant with significant control and influence. Third are those demands that apply uniquely to the artist, since they derive from the peculiar nature of his task and powers. Only rarely is there justification for a society to impose constraints on the art. Control over the artist, however, has no moral justification.
- BERLEANT, Arnold.** Music As Sound And Idea. *Current Musicology* 95-100 1968.
Music sharpens for us the differences between the ways in which art is experienced and the ways those experiences are understood and conceptualized. Applied to the notion of a 'piece of music', we must make clear the differences between the musical object as a perceptual whole and the musical object as a conceptual whole. This distinction is applied in a symposium to papers by Professor Crocker and Carpenter, in which the understanding of the musical object is impeded by substituting a conceptual object for a perceptual one.
- BERLEANT, Arnold.** On The Circularity Of The Cogito. *Phil Phenomenol Res* 26,431-433 Mr 66.
On the basis of the dubito, Descartes infers that he is thinking and, consequently, that he exists as a thinking being. This paper attempts to raise a logical issue, namely that the method of doubting itself contains the necessity for a doubter. Hence, Descartes' conclusion follows, not from the use of the method, but from its adoption, since doubting logically presupposes a doubter and thus an existent being.
- BERLEANT, Arnold.** Repressive Tolerance And Pure Toleration. *Confrontation* 70-74 Wint-Spr 70.
This paper responds to Marcuse's argument in "Repressive Tolerance" that instead of encouraging open debate, tolerance is transformed into an argument for acquiescing in the status quo. This leads him to accept de facto intolerance, insisting only that it be directed toward the established repressive order rather than the radical subversive one. Selective tolerance, however, is more than hypocritical; it is self-contradictory. The only consistent restriction is one that preserves tolerance from self-destruction. Moreover, toleration is no longer an individual right but a social process for attaining social ends. It is a prerequisite for a cooperative social ethic and a humanistic social order.
- BERLEANT, Arnold.** The Sensuous And The Sensual In Aesthetics. *J Aes Art Crit* 23,185-192 Wint 64.
Aesthetic theory commonly discriminates between the sensuous and the sensual in experiencing art, admitting the former and disallowing the latter. This paper examines the role of the senses in aesthetic experience in historical and empirical respects, and shows that both metaphysical and moral convictions have underlain the distinction, but that on aesthetic grounds it is not a tenable one. Moreover, proscribing the sensual domain from art has distorted aesthetic theory by eliminating a large area of experience from aesthetic perception which is intrinsically admissible and pertinent. Rejecting the distinction, on the other hand, moves numerous problems in aesthetics closer to clarification and resolution.
- BERLIN, Isaiah.** *Historical Inevitability.* NY Oxford Univ Pr 1955.
Mr Berlin offers a compelling indictment of the modern tendency to deny the relevance of moral considerations to history: to minimize the influence of human individuals upon—and their responsibility for—historical events, as well as to eliminate evaluation and moral judgment from the writing of history. History, it is maintained, neither can be nor should try to be "objective," i.e., free from evaluations, in the way that physics is "objective."
- BERLIN, Isaiah.** *Vico And Herder: Two Studies In The Philosophy Of History.* NY Viking Pr 1976.
In a sequence of chapters on "The Philosophical Ideas of Giambattista Vico" (Part I of which deals with Vico's general theory and Part II of which focuses on his theory of knowledge) and "Herder and the Enlightenment" Isaiah Berlin shows the parallels between the startlingly original Italian thinker and Herder's conception of the uniqueness of civilizations and the need for empathetic understanding of other cultural systems. In an essay on Herder's relationship to the Enlightenment, it is shown that Herder emphasized the uniqueness of each civilization, the importance of seeking to understand the *Volksgeist* of each historical peoples, the relativity of systems of values, the communal nature of artistic and cultural achievements, the striving of various cultures towards the ideal of "humanity," the dramaturgical form of incommensurate expressions of life, thought and feeling.

The article applies the Marxist philosophical paradigm of base versus superstructure in an analysis of the effects of the advanced stage of imperialism on higher education in the United States. In addition, functionalist constructs such as manifest versus latent functions and goal displacement are also utilized. Participant observation is the primary mode of data collection. The article concludes that, in view of the proletarianization of faculty roles, and the general crisis of capitalism, new strategies and tactics must be developed which rely most heavily on reform based upon trade unionism and ultimately a revolutionary struggle for socialism.
- BERMAN, Eleanor Davidson.** *Thomas Jefferson Among The Arts; An Essay In Early American Esthetics.* NY Philosophical Lib 1947.
- BERMAN, Milton.** *John Fiske: The Evolution Of A Popularizer.* Cambridge Harvard Univ Pr 1961.
This book is a biography of John Fiske, the leading spokesman of Darwinian and Spencerian ideas in 19th century America. Berman examines not only Fiske's philosophical ideas as presented in his *Outlines Of Cosmic Philosophy* and his contributions to the relation of religious ideas and evolution, but also his better known works in history, such as *The Critical Period*, *The Discovery Of America*, and *The Beginnings Of New England*. He pays special attention to Fiske's unending financial difficulties as the causes for his development from an academic scholar to a lecturer and popularizer.

BERNARD, Jessie. The Validation Of Normative Social Theory. *J Phil* 47,481-492 Ag 50.

This critique of *The Logic of Sciences and Humanities* by F S C Northrop, focuses on problems which Northrop tries to answer with a scientific approach to ethics. The critique's author discusses several problems; one of which arises when Northrop tries to build his system of ethics on the accepted set of postulates underlying the natural sciences. The author maintains Northrop's belief, that there is an accepted set of postulates, is itself problematic.

BERNDTSON, Arthur. Beauty, Embodiment, And Art. *Phil Phenomenol Res* 21,50-61 S 60.

Embodiment is seen as the perception of adequate emotion as fused with form, and it occurs insofar as the preliminary activities of creation have been completed. This developmental phase is called transitive expression; it is the passage of emotion from a primitive to an adequate state through the mediation of form. Transitive expression implies embodiment as its final state or outcome. The purpose of the paper is to show that beauty is the emergent quality of embodiment. It is concluded that the ugly (a feeling of loathing) is wholly incompatible with embodiment.

BERNEIMER, Richard. *The Nature Of Representation, A Phenomenological Inquiry*, H W Janson (ed). NY New York Univ Pr 1961.

The author sets forth a theory of representation by first distinguishing a representation from and relating it to a sign, a substitute, and a replica. A representation is said to have a distinct existence and value of its own as well as to reveal something beyond itself. Categorical, legal, and mimetic representation are discussed, as is the connection between subject and representation; and finally, the developed concept of representation is brought to bear on the functions of signs, substitutes, and replicas. There is a brief introduction by H W Janson included.

BERNSTEIN, Richard J (ed). *Perspectives On Peirce*. New Haven Yale Univ Pr 1965.

BERNSTEIN, Richard J. *John Dewey*. NY 1966.

In this book the leading philosophical ideas of Dewey are discussed by a sympathetic critic. In addition, interesting biographical information is included, and some account of Dewey's non-philosophical views. Although the author believes that Dewey made serious mistakes, he regrets the recent neglect of Dewey. In an attempt to evaluate Dewey's contribution, the final chapter compares his views to four trends in recent philosophy: logical empiricism and the philosophy of science; linguistic analysis; existentialism and phenomenology; and the metaphysical tradition. The conclusion is that "all of us, philosophers and others, can learn a great deal from Dewey in the perennial task of seeking a comprehensive vision and understanding of man and his place in the universe."

BERNSTEIN, Richard J. *Praxis And Action: Contemporary Philosophies Of Human Activity*. Philadelphia Univ Of Penn Pr 1971.

Four major movements in philosophy—Marxism, existentialism, pragmatism, and analytic philosophy—appear separated by profound differences in method, goals, and the language of their inquiries. But R Bernstein believes that all four share a common concern for "man as agent" and that each has distinctive contributions to offer the other. The final section treats the "concept of action" through various phases in the evolution of analytic philosophy.

BERNSTEIN, Richard J. Dewey's Naturalism. *Rev Metaph* 13,340-353 D 59.

BERNSTEIN, Richard J. John Dewey's Metaphysics Of Experience. *J Phil* 58,5-13 Ja 61.

The author's purpose is to clarify what Dewey means by "quality" and to suggest

how it is a key for understanding his theory of experience, inquiry, and value. He also argues that the analysis of quality reveals a fundamental ambiguity in Dewey's philosophy between phenomenological and metaphysical strains, an ambiguity which he never successfully resolved.

BERNSTEIN, Richard J. Sellars' Vision Of Man-in-the-Universe, I. *Rev Metaph* 20,113-143 S 66.

The author's purpose in this critical study of *Science, Perception and Reality* (New York, 1963) is to identify and examine major themes in Wilfrid Sellars' philosophical system. He first considers Sellars' views on two rival images of man, namely, the "manifest" or common sense image and the ontologically prior scientific image which alone can tell us what there is. He then examines Sellars' notion of meaning and his concept of rules and pattern-governed behavior, before turning to his theory of perception, his problematic notion of persons, and the concept of reality central to his scientific realism.

BEROFISKY, Bernard. *Determinism*. Princeton NJ Princeton Univ Pr 1971.

BEROFISKY, Bernard. Causality And General Laws. *J Phil* 63,148-157 Mr 66.

Initially, a statement of a Humean theory of causation, i.e., a theory according to which the analysis of particular causal propositions must make a reference to general laws or the claim that there exist general laws of a certain kind, is presented and it is shown to be immune to a number of specified objections. Ducasse's analysis of causal propositions is then stated and shown to be inadequate primarily because Ducasse's use of the notion of the "state of affairs in which changes occur" creates problems which can be overcome only by adopting the Humean theory, a theory to which Ducasse's is supposed to be an alternative. In Ducasse's paper in this issue of the *Journal*, he presents a number of criticisms of Hume's theory of causation. I try to show that these criticisms do not apply to the version of a Humean theory stated in my paper.

BEROFISKY, Bernard. Determinism And The Concept Of A Person. *J Phil* 61,461-475 S 64.

The general claim that deterministic accounts of activities unique to persons is impossible is examined through a critique of those philosophers who have defended this claim with respect to the following: (1) I can do A; (2) As a result of my deliberation, I do A; (3) I decide to do A; (4) I exert an effort of will in order to do A; and (5) I do A. There are, however, criticisms of some central arguments of Melden and Peters and a few remarks in defense of an affirmative answer is offered.

BERTOCCI, Peter A. *Introduction To The Philosophy Of Religion*. NY Prentice-Hall 1951.

BERTOCCI, Peter A. *Religion As Creative Insecurity*. NY Association Pr 1958.

In deliberate opposition to recent portrayals of religion as a means to "peace of mind," the author urges that religion involves creative insecurity. God makes man free. In and through the risks of freedom man develops mature personality. He learns to love by freely loving. As human love rises to forgiveness, it shares in the love which sustains existence. Even suffering may be transcended, not through the attainment of happiness but in the blessedness of those who travel in the way of the Cross.

BERTOCCI, Peter A and Millard, Richard M. *Personality And The Good: Psychological And Ethical Perspectives*. NY McKay 1963.

This elaborate book is divided into five parts. First, it surveys contemporary depth psychology; second, it surveys three problems of theoretical ethics; third, it reviews classical and contemporary solutions to ethical problems; fourth, after having provided a normative "symphony of values," it proposes "principles of ethical choice"; fifth, it aims to guide the reader in problems of political decision, sexual conduct, and religious faith. The distinctive feature is an argument for the mutual dependence of psychology and philosophy. "psychoethics," the authors' position, challenges both psychologists who would usurp the role of moralists, and ethicists who would ignore psychology. The main thesis is that the *ought* is not reducible to

the *is*, but that the *ought* has roots in the *is*. The human predicament is stated as "The Struggle against Chaos." This struggle is carried on biologically, psychologically, and morally. The solution is an ethics of self-realization. The authors defend reason's ability to maximize satisfactions and to guide harmonious personal growth that does not rule out freedom and creativity.

BERTOCCI, Peter A. The Moral Structure Of The Person. *Rev Metaph* 14,369-388 Mr 61.

The author's aim is to clarify the nature of personal will and moral obligation. After defining the person as self-conscious matrix of choice, he examines effort or will-agency and argues that free will means freedom to think things through to a truthful conclusion. He then describes the experience of agency, distinguishes will-agency from will-power, and discusses the problem of assessing responsibility. The author then inquires whether and in what sense the experience of obligation is cognitive, and whether obligatoriness is acquired. He concludes with remarks on thinking, willing, obligation, and the development of personality.

BERTOCCI, Peter A. Toward A Metaphysics Of Creation. *Rev Metaph* 17,493-510 Je 64.

Creative change characterizes the nature of God, and a temporalistic form of personalistic theism can illuminate human experience. To establish this thesis, the author first discusses the logical, metaphysical, and religious bases for the traditional view that ultimate Being must be perfect and unchanging. He then proposes an alternate model of reason, presents a concept of persons as active unities capable of maintaining their self-identity through change, and argues for the possibility of creation ex nihilo. Finally, after discussing valid classical emphases, the author formulates his personalistic notion of God as creator and considers God's relation to human beings.

BERTOCCI, Peter. An Impasse In Philosophical Theology. *Int Phil Quart* 5,379-396 S 65.

An impasse in philosophical theology exists when certain knowledge is demanded of a necessary and perfect God. For, as Kant argues, there is no certain access to the "ideal without a flaw" either by cosmological or teleological arguments. Tillich backs out of this impasse by holding that reason presupposes the unity of knower and Reality. For him, either rational and mystical certainty or skepticism; either identity or estrangement. Yet the certainty that is presumably guaranteed by this "ontological" approach is undermined because all the symbols man uses to describe such a God are imperfect. Is the "ideal" of indubitable knowledge of a "flawless" God a worthwhile ideal if its very nature sets up an impassable chasm between the conditioned and the unconditioned? A way out of the impasse is suggested.

Makiguchi began as a rationalistic-empiricist, but ended as a religious believer in spiritual enlightenment. He is important because his educational movement now has ten million adherents. The grand plan of this social movement is to require each individual to establish a philosophy of life (rather vaguely specified) and to elevate the standard of living. It is believed that this can occur through education and religion.

BICKEL, Alexander M. *The Morality Of Consent*. New Haven Yale Univ Pr 1975.

The thesis of this book is that men must consent to the rule of law if they are to avoid "the tyranny of some of us over the others." In the first chapter Professor Bickel notes the tendency of democratic governments to repress minority opinion and he contends that in the American system the liberal "finds his escape in the Constitution, which, speaking through the Supreme Court, limits majority rule." Chapter 2 describes the concept of citizenship in Constitutional perspective. In Chapter 3, Bickel discusses problems of civil disobedience associated with the First Amendment. Chapter 4 focuses upon civil disobedience, revolution, the limits of the law, and moral duty and the limits of civil disobedience. In the final chapter Bickel considers the moral authority of the intellectual.

BIDNEY, D. *The Psychology And Ethics Of Spinoza: A Study In The History And Logic Of Ideas*. New Haven Yale Univ Pr 1940.

Contrary to the uncritical assumption of contemporary writers that Spinoza's philosophy constitutes a systematic unity, we maintain that an unprejudiced analysis of his work reveals no such inner harmony and consistency. The traditions and their conflicts persist. Obviously, according to Dr Bidney, Spinoza did little or nothing in the way of reconciling them. Spinoza, accordingly, can be understood in terms of the conflict of traditions by looking both backward and forward.

BIDNEY, David. The Two Sources Of Culture And Ethics. *Monist* 47,625-641 Sum 63.

The concept of "culture" has two senses: (1) an ideal or norm of behavior and thought to be realized through education, and (2) as roughly equivalent to "custom"—an accumulation of social habits, institutions and traditional modes of belief. (1) is associated with the idea of progress, (2) with a kind of conservatism. Ethics too has a dual sense, a dual origin. After discussing the dual origins of culture and ethics the article concludes that while anthropology has lost faith in the ideal of progress, only such an ideal can give meaning to human life and cultural history. The anthropologist is obligated to help direct man's cultural advance.

- This paper proposes a Platonic solution to the relation between perceived nature and discourse, phenomenology and semantics. It seeks to demonstrate through certain forms of language the mingling of extension and distinction. The demonstration is speculative—that is to say, in the root meaning of these words, it attempts to bring one to see something beyond language, something of that reality for which philosophers are in search. The methodology employed is based on Professor William Weedon's formalization of the earlier Socratic dialectic through Whitehead's method of extensional abstraction. The paper tries to show that this methodology—Socratic demonstration—can provide a basic vocabulary for epistemology.
- BIGO, Pierre.** The Enigma Of Marxism. *Int Phil Quart* 5,637-646 D 65.
- The curious fact is brought out that in France there are few if any really scholarly expositions of Marxism based on its sources which have been produced by Marxists themselves. Most Marxist writers either stick to elementary "catechism" or propaganda expositions of Marxist doctrine, or else to applications of it to various problems. Why is this? The author believes this is due to inner tensions within the original doctrine of Marx itself, which makes it impossible to expound it objectively without laying bare its inner conflicts. One such tension is the ambiguity over the kind of doctrine Marx was presenting: an empirical scientific analysis of society and economics or a philosophical theory of man? Secondly, what gives the genuine appeal and strength to the doctrine today is its guiding vision of the dignity of man. Yet its explicit philosophy of materialism clashes with the above.

BINKLEY, Luther J. *Contemporary Ethical Theories*. NY Philosophical Lib 1961.

The leading ethical theories of this century, with the exception of American naturalisms and Continental speculations, are summarized and criticized in this book. The views of Moore, Ross, Ewing, Ayer, Stevenson, Toulmin, Urmsen, and Hare are explained in clear and simple language. There is ample use of short quotations and concrete illustrations. The more important criticisms of each view are reported from the recent literature and supplemented with the author's own comments. In many

cases an attempt is made to see how the ethicist might reply to his critics. In a concluding chapter Binkley seeks to explain the nature and importance of contemporary ethical theory. In spite of its obvious differences, it has basic similarities with traditional philosophy. The various ethicists are playing complementary philosophical games. Although ethical theory can be useful in clarifying our everyday moral thinking, its main justification lies in its contribution to human knowledge.

BINKLEY, Luther John. *Conflict Of Ideals: Changing Values In Western Society*. NY 1969.

BINKLEY, Robert. A Theory Of Practical Reason. *Phil Rev* 74,423-448 O 65.

This paper proposes a concept of *valid reasoning* that will apply univocally to reasoned judgment (inference), reasoned decision (choice), and reasoned withholding of judgment and decision. *reasoning* is taken to include all these; *validity* of reasoning is defined in terms of the *ideally rational mind*, which is in turn defined by a modal logic of judging and deciding. The definition is defended by relating it to another ideal, that of the Socratically omniscient and Stoically omniscient Sage, who is defined by a modal logic of knowing and doing. In the course of this I distinguish between the vehicle and the description of a mental act, deny that reasoning is a transition, analyze doing as causing to be, and maintain that, since doing stands to deciding as knowing stands to judging, reasoned decision is genuinely practical reasoning.

BIRD, Graham Harrington. *Kant's Theory Of Knowledge: An Outline Of One Central Argument In The Critique Of Pure Reason*. NY Humanities Pr 1962.

Bird's book is a detailed exposition of Kant's theory of perceptual objects and persons, from the point of view of contemporary analysis. The attempt is made to clarify Kant's theory for readers who approach Kant from that point of view. Of special value are the criticisms of phenomenalist interpretations of Kant's doctrine of physical objects, and the comparison with Strawson's account of persons.

BIRD, Otto A. *The Idea Of Justice*. NY Praeger 1967.

This volume is one of a series of studies of basic ideas—freedom, love, progress, justice, and others. The volume presents an analysis of the positive law theory, the social good theory, and the natural right theory of justice, with a list of historic proponents of each. Of the three views, the social good theory is depicted as occupying a middle position between the others, sharing some features with each of them. Considerations opposed to the social good theory, as presented by the author, are less devastating than those opposed to the other two theories. However, the author does not explicitly espouse the social good theory.

BIRD, Otto. *Syllogistic And Its Extensions*. Englewood Cliffs NJ Prentice-Hall 1964.

This book is a formal study of the structure of syllogistic logic, taken from the Lukasiewicz point of view in which syllogisms are treated as conditional sentences rather than inferences, so that a certain amount of propositional logic becomes involved. The system is axiomatized in the usual way, with a discussion of consistency, independence, and completeness. Negative terms are next introduced, which leads to eight non-equivalent propositions, each in four forms; followed by a chapter on empty terms, the problem of existential import, and a smooth transition to Boolean algebra.

BIRKHOFF, Garrett. *Lattice Theory*. NY Amer Math Soc 1940.

The first six chapters of the monograph present, in a systematic order, the theory of partially ordered systems, of lattices as a subclass of the latter, and then of various special kinds of lattices, including abstract Boolean algebras. In every chapter, the theory of the lattice structure under consideration is applied to specific mathematical disciplines, selected from such fields as set theory, topology, and abstract algebra. The last three chapters are devoted to a more comprehensive discussion of the applications of lattice theory to function theory, logic, and probability.

BIRNBACH, Martin. *Neo-freudian Social Philosophy*. Stanford CA Stanford Univ Pr 1961.

This book attempts, "from the standpoint of political science, more particularly,

political philosophy," a "synthesis and elucidation" of the thought of the non-Freudians—here represented by Karen Horne, Erich, Fromm, Harry Stack Sullivan, and Abram Kardiner, Franz Alexander and Harold Lasswell.

BIRRO, Cela. *The Ways Of Enjoyment: A Dialogue Concerning Social Science.* NY Exposition Pr 1957.

This is a series of three dialogues: on the universal, the particular, and the romantic in social relations. The characters are: Bergson, Frazer, Freud, James, and Whitehead. The dominant themes are Freudian. "Cela Birro" is a pseudonym.

BIRX, H James. *Pierre Teilhard de Chardin's Philosophy Of Evolution.* Springfield IL Thomas 1972.

The author critically discusses four fundamental principles of T de Chardin's philosophy. These are monistic idealism, the assumption that consciousness is evolving into greater complexity, the existence of critical thresholds of consciousness, and the existence of an ultimate Omega point which is the goal of all reality. The author also compares the philosophy of T de Chardin with that of a large number of evolutionary thinkers of the 18th, 19th, and 20th centuries. The author provides an interpretation and evaluation of the validity of Teilhard's philosophy, in terms of his own monistic materialism.

BISHOP, Donald H (ed). *Indian Thought: An Introduction.* NY Wiley 1975.

The purpose of the text is to introduce both Western and Indian students to traditional Indian thought. There are five parts, reflecting to some degree a chronological order. Part One, "Early Indian Literature and Thought," deals with the Vedas, the Upanisads, and the Bhagavad Gītā. Part Two covers "The Heterodox Schools," such as Jainism, Lokyata Materialism, and Buddhism. Part Three concentrates on "Areas of Thought": epistemology and logic, metaphysics, social philosophy, Indian ethics, and concepts of man. Part Four presents "The Medieval Period." Part Five, in "The Modern Period," introduces the great thinkers of the recent past.

BISHOP, Jonathan. *Emerson On The Soul.* Cambridge Harvard Univ Pr 1964.

This is a literary study of Emerson's conception of the soul and its unification of instinct, senses, imagination, sentiment, conscience and intellect, especially as reflected in his use of words, rhythm, metaphor and tone. The book supports a view of the literary enactment of philosophic doctrine as related to the crises of Emerson's creative identity. The book's analysis of Emerson's theory of experiencing is of value to those working in philosophical psychology and psychological aesthetics.

BITTLE, William E. Language And Culture Areas. *Phil Sci* 20,247–256 O 53.

BIXLER, Julius Seelye. *A Faith That Fulfills.* NY Harper 1951.

The Ayer Lectures were delivered in 1948 at Colgate-Rochester Divinity School. Attention is called to the way in which the movement called "Existentialism" through its morbid approach to questions of belief has undermined religious faith. An appeal is made for a faith based on loyalty to values and the use of the methods of rational inquiry. The contributions that can be made to theology by personal suffering on the one hand and the insights of art on the other are hinted at. A final chapter develops a view of the way a principle of alternation (suggested by Tynbee's phrase "withdrawal and return") can be seen to be at work in the religious life.

BIXLER, Julius Seelye. *Conversations With An Unrepentant Liberal.* New Haven Yale Univ Pr 1946.

These three dialogues are the Dwight Harrington Terry lectures delivered at Yale in 1945. They maintain that—in spite of its many critics—the liberal or "rational" point of view is more desirable than any other and can be made to develop its own effectiveness in politics, education, and religion. Attention is paid to the claim of "neo-orthodox" theologians that it lacks emotional depth, and to the argument of some pragmatists that it cannot stand up against the powerful social forces of the

day. An appeal is made for the need of a common approach to universal ideas, especially in a world at war.

BIXLER, Julius Seelye. *Education For Adversity.* Cambridge Harvard Univ Pr 1952.

We educate for achievement, forgetting that adversity is inevitable, whereas successes are fleeting and few. Can education prepare for disappointment? To keep one's head in a fight—win or lose—much seems to depend on whether we know what we are fighting for. The rationally held conviction can be counted on, ultimately, as a source of strength. Faith in reason has an invulnerability of its own, since to question it is, in that very act, to affirm it. Church, home, and school should unite to show that certain ideas are rationally established and natural objects of religious loyalty.

BIXLER, Julius Seelye. *The Resources Of Religion And The Aims Of Higher Education.* Haddam CT Hazen Foundation 1943.

Thomas Mann calls attention to Genesis 49 where Jacob blesses Joseph with the blessings of heaven above (form, proportion, reason) and those of the deep that coucheth beneath (life, instinct, the unconscious). Education is the process of bringing the chaos of the deep under the control of form. In the transition from blind to reasonable desire education and religion merge. When one is truly reasonable he is truly religious and when he is religious his approach to the persuasions of reasonable form assume a new dimension. In the one case the attitude of critical inquiry takes over, in the other loyalty to the Good is the dominant concern. The difference is simply that where reason applies standards of intellectual honesty, religion seizes with wonder and devotion on the amazing fact that honesty can appear at all in our crudely competitive world.

BIXLER, Julius Seelye. "Science And Faith" in *Mid-Century—The Social Implications Of Scientific Progress*, John E Burchard (ed), 204–213. Cambridge MA Technology Pr 1950.

Science has important things to say about the spiritual life. 1) There is the need for integrity. "Be sure your sin will find you out" might well be inscribed over the laboratory door. 2) co-operation is necessary for success. In the realm of science no man lives to himself alone. 3) The Kingdom of Ends has an intrinsic value which we neglect at our peril. "Sit down before fact as a little child," wrote T H Huxley, "...follow humbly wherever and to whatever abysses nature leads, or you shall learn nothing."

BIXLER, Julius Seelye. "Two Questions Raised By Wm James' Essay On The Moral Equivalent Of War" in *In Commemoration Of Wm James*, 58–71. NY Columbia Univ Pr 1942.

James asks in this essay how the social environment may be changed to cultivate heroism with cooperation instead of conflict. Two questions: 1) What does this do to James' view of thinking as the outcome of a biological, competitive process? 2) How does such an appeal for a socialistic program affect James' conspicuously individualistic point of view? 1) Actually, James' pragmatism does not rest content with survival as a test of truth or goodness. The immediacy and non-utilitarian quality of many types of experience that are "right in themselves" is often stressed. 2) James' individualism constantly reaches out beyond itself to become an appeal for justice and fairness. It is not "my wishes" that are important, but the law that each person's wish should be respected. Much evidence can be adduced to show that James' ideas of the nature of the organism, the environment, and the appropriate tests for truth and goodness changed as his own thought developed.

BIXLER, Julius Seelye. "Whitehead's Philosophy Of Religion" in *The Philosophy Of Alfred North Whitehead*, Paul Arthur Schilpp (ed), 489–511. Evanston IL 1941.

Whitehead has given us not a new stereotype of Truth, or God, or Immortality, but a new eagerness to receive intimations of what these words may mean. He has made us more responsive to the fact of passage and more ready to perceive its creative aspect. He teaches us to look below the superficialities of sense experience to the deeper relationships which bind the individual to his fellow men and to his God. Transition brings suffering but it points to a harmony which "with its union of Youth and Tragedy is the sense of Peace. In this way the World receives its persuasion toward such perfections as are possible for its diverse individual occasions."

BIXLER, Julius Seelye. "William James As Religious Thinker" in *William James, The Man And Thinker*, 119–141. Madison 1932.

James was the philosopher of the open door, sensitively receptive himself to new intimations of the truth of old beliefs and helpful to others in their efforts to become more receptive. He was a scientist less provincial than many of his colleagues and more aware of the evidence provided by the feelings. He based his philosophy on the organism-environment figure, a source of strength insofar as it enabled him to explain the role of will in faith, of weakness in that it made the contemplative experience more difficult to explain. James' voluntaristic emphasis fits his discussion of faith better than his discussion of truth. Was he himself a non-believer who defended the right of others to believe? Yes and No. Today's tragedy helps us to see the validity in James' plea for belief in a limited God.

BIXLER, Julius Seelye. Four Approaches To Belief. *Iliff Review* 13,1–10 Spr 56.

The Frederick J Cox Lectures at Iliff School of Theology consisted of four lectures, with titles, respectively: "Romantic Feeling," "The Existential Act," "The Mystic Way," and "The Rational Synthesis." Romanticism offers religion its own richness of feeling; existentialism has special insights but is, in its total emphasis, too introspective and pessimistic; the mystic, especially as treated by Bergson, offers an example of a new human species pointing toward an open society where the cooperative drives implicit in life from the beginning shall be free to achieve their highest effectiveness. Each of these contributes, in its own way, to a final rational synthesis where the skepticism of the logical positivists on the one hand, and the unjustified appeal to supernatural revelation of the neo-orthodox on the other, can be met.

BIXLER, Julius Seelye. The Background For Hitler In German Thought. *American Scholar* 9,437–448 Autumn 40.

The great strengths of the German people are of a type which makes them susceptible

to abuse in the hands of those who do not really understand their significance. (1) The Germans have revered philosophy without always understanding it, cf. their adoration of Husserl and Heidegger with their personal treatment of the one and their failure to note the inconsistencies of the other. (2) Their awareness of the mysterious, Das Ungeheure, has led to a demand for a secret bond among believers not subject to rational rules—cf. the writings of Emanuel Hirsch. (3) A concern for the soul as a product of the soil has led to provincialism—cf. Hermann Keyserling. (4) Appeals to "life" and "instinct" on the part of the Lebensphilosophen (Theodor Lessing, Bok, Ludwig Klages) have been removed from their philosophical setting by non-philosophical minds and quoted in support of nationalism.

BIXLER, Julius Seelye. The Contribution Of Existenz-Philosophie. *Harvard Theological Review* 33,35-63 Ja 40.

Kierkegaard describes the soul's struggle to find God; Heidegger tells what happens when it faces up to death, Jaspers carries on in the lonely individualistic tradition, maintaining a doggedly uncompromising quality which accepts indecisiveness as the tragic price of honesty. Existenz in his hands is Hegelianism turned inside out. All three writers slant their thought to subjectivism and barely escape the religious egocentric predicament. "To thine own self be true," we quote, but do we always remember that Polonius, who spoke the words, was himself a fool?

BIXLER, Julius Seelye. The Existentialists And William James. *American Scholar* 28,80-90 Wint 1958-59.

Both the Existentialists and William James challenge philosophy to move from the tower to the market place and to face up to the hazards and the opportunities of creative action. Both espouse empiricism, both extend the term to include the data of feeling as well as sense experience, both deserve the title "realistic," both do what they can to "personalize" philosophy. But the Existentialists do this for the most part by ignoring science, whereas James finds a living and personal quality in science itself. Where the Existentialists take existence as a basic datum for reference James appeals to life. Where the Existentialists concentrate on despair, James stresses faith and hope; where they see an abyss he discovers the ladder of faith; where they succumb to nausea he stresses the chances for health. Theirs is a subjective pessimism, where James appeals for the kind of stubborn courageous faith which uncovers the evidence needed for its own verification.

BIXLER, Julius Seelye. The Failure Of Martin Heidegger. *Harvard Theological Review* 56,121-143 1963.

Heidegger attempts to raise the veil which the Greeks had drawn over Being. They had a word for it but it was a spoken word and their fondness for the word "is" as a copula and for the view of knowledge which requires the attachment of a predicate to a subject led them to distortions. Yet Heidegger, attempting to get rid of these by an appeal to an experience of immediacy introduces distortions of his own. They are (1) based on his arbitrary use of the German language; (2) reflective of his equally arbitrary fondness for the negative and nihilistic. Thus anxiety, dread, care and boredom become instruments of interpretation and while they may prove useful to Heidegger the reader with normal living interests is not convinced. With Hölderlin Heidegger believes that the "night of the world" has come. God is veiled, Nothingness is revealed, life is lived under the spell of death.... Instead of disclosing things as they are, Heidegger has displayed himself as he is.

BIXLER, Julius Seelye. The Problem Of Religious Knowledge. *Phil Rev* 51,574-586 N 42.

Let us define experience as "what happens when a self meets a world," knowledge as "well-grounded beliefs expressed in critical judgments," value as "what is reasonably considered to be an authoritative norm for conduct, appreciation, or reflection," and religion as "devotion to ideal values and to the power which is at work to make them actual." Although religion lacks the preciseness of science, its closest analogy, nevertheless, is with the knowledge situation since, like knowledge, it presupposes participation in relationships that are as reasonable as they are universal and necessary. "faith" stands for practical loyalty to ideals. The beliefs implied are expressions of voluntary commitment rather than statements about empirical fact. Though unverifiable in the scientific sense, they may appeal to a type of verification leading to an assurance which cannot be called arbitrary. Religious knowledge leads to an interpretation of the world on the basis of such knowledge of ideals.

BLACK, Hubert P. *Religious And Philosophical Foundations Of Education.* Cleveland TN Pathway Pr 1967.

BLACK, Hugh C. A Four-Fold Classification Of Educational Theories. *Educ Theor* 16,281-291 Jl 66.

BLACK, Hugh C. A Way Out Of Educational Confusion. *Educ Theor* 4,113-119 Ap 54. The second of three articles from his dissertation (University of Texas, 1949), Black suggests a way out of educational confusion by connecting and relating integrally the four aspects of education variously emphasized by extremists (either Progressivists or Traditionalists) or more tenable theorists (either "Learning-Process" exemplified by John Dewey or "Learning-Product" exemplified by Henry C Morrison). He defines "education" as "Cultivation of Life at its Higher Levels"—an integral, "both-and" view showing clearly the relationships between the terms of education as transmission of the social heritage, as individual development, as learning-process, or as learning-product.

BLACK, Hugh C. Confusion And Conflict In Educational Theory: An Analysis. *Peabody Journal Of Education* 30,153-160 N 52.

This is the first of three articles from a dissertation of May 1949 at the University of Texas, in which Black analyzes the conflicting theories which have contributed to the educational confusion. He classifies them, identifies their distinguishing characteristics by their varying emphases on four aspects of education, and indicates discovery of a basis for resolving the conflicts which will lead to a broader, more inclusive point of view.

BLACK, Hugh C. Educational Philosophy: From Is To Ought—The Difficult Rise. *Proc 23 Meet Far West Soc* 75-87 1975.

In his 1974 presidential address to the Far Western Philosophy of Education Society, Black notes the reality of what "is": advocates of coercion in our relationships divorcing politics from ethics and Kantian "oughtness," existentialists showing indifference and lack of responsibility, and educational philosophers being diverted from Idealism by misrepresentations. We may rise to what "ought" to be by drawing on the knowledge resources of such dynamic Idealists in philosophy as Alexander Meiklejohn, Susanne K Langer, Theodore M Greene, and in education as I L Kandel, H H Horne, and Frederick Eby. We must synthesize better the two opposing approaches in education argued since Dewey's *Reconstruction in Philosophy* of 1920.

BLACK, Hugh C. Practical Implications Of A Theory Of Education. *Educ Theor* 4,263-268 O 54.

In the third of three articles from his 1949 University of Texas dissertation, Black draws the implications for educational practice and for democracy of the view that education is the cultivation of life at its higher levels. The better account of the nature of subject-matter and of general method, the centering of the school around the pupil-teacher relationship, the importance of general education and basic professional education in teacher preparation, the professional relations of administrators and teachers, a continuous school system aiming to produce the good man and the good citizen—all result from a "both-and," educational philosophy of Idealism.

BLACK, Hugh C. The Future Of Philosophy Of Education: Overcoming The American Way. *Philosophy Of Education* Volume Unknown 1973-74.

We must spring forward to do better in educational philosophy by falling back on that available knowledge which will enable us to overcome our usual educational habits. We proceed one-sidedly still, emphasizing some one aspect of what education is, each knight-errant running the squirrel-cage treadmill of professional power politics and self-aggrandizement by touting his own panacea to the exclusion of all other possibilities. We fall into our educational tragedies because we fail to act on the knowledge expressed by Dewey over twenty-one years ago: that so many of the "new" panaceas are in fact old ones. We must seek balanced views by overcoming our habit of being "scoffers at knowledge."

BLACK, Hugh C. Values, Philosophy, And Education. *Progressive Education* 32,109-115 Jl 55.

This 1954 presidential address to The Southwestern Philosophy of Education society "took stock" of where educational philosophy had been, was, and should go. Reflecting on the seemingly innate perversity of Americans in obscuring our values, Black portrayed us as too often losing our heads (not knowing where we are going but being determined to get there quickly), exhibiting anti-intellectualism as the educated classes poorly fought to protect our liberties and unnecessarily and dangerously separated philosophy and education, two fields that are truly interdependent. Philosophers should better attend to education, and we must put more philosophy into education.

BLACK, Hugo C. A Four-Fold Classification. *Proc Phil Educ* 21,41-43 Ap 65.

BLACK, Max (ed). *Philosophy In America.* Ithaca NY Cornell Univ Pr 1965.

BLACK, Max (ed). *The Social Theories Of Talcott Parsons: A Critical Examination.* Englewood Cliffs NJ Prentice-Hall 1961.

Ten essays stemming from discussions and seminars on Parsonian sociology by faculty members at Cornell. Edward C Devereux Jr outlines its theoretical influences, antecedents, and main features. Robin M Williams, Jr analyzes the conceptual scheme under which Parsons aims to subsume all analytical knowledge of social conduct. Chandler Morse discusses the four "functional imperatives" or problems that Parsons claims any social system must resolve if it is to survive. Alfred L Baldwin sets forth and evaluates Parsons' functional theory of personality. Urie Bronfenbrenner shows similarities and differences between Parsons' theory of identification and Freud's. Parsons' contribution to the study of organizations is evaluated in essays by Henry A Landsberger and William Foote Whyte. Max Black raises methodological questions about Parsons' conception of the purpose of a general theory of action, his basic assumptions, and his conception of the "pattern variables." Andrew Hacker criticizes Parsons' political views. The volume concludes with Parsons' essay in response.

BLACK, Max. *A Companion To Wittgenstein's Tractatus.* Ithaca NY Cornell Univ Pr 1964.

Those who have looked forward to the appearance of Black's book for a definitive interpretation of the *Tractatus* will be disappointed. For Black is not primarily concerned with arguing for a definitive, coherent interpretation. Instead, this book is a companion "intended to make it easier for a serious student of Wittgenstein's early work to reach his own interpretation of the *Tractatus*." Black has divided the text into "installments" which are introduced by preliminary statements. These are followed by detailed notes commenting on difficult expressions, relevant quotations from Wittgenstein's other works and unpublished manuscripts, explanations of the views to which Wittgenstein refers, cross references to related passages, and occasional free paraphrases of puzzling passages.

BLACK, Max. *Caveats And Critiques: Philosophical Essays In Language, Logic, And Art.* Ithaca NY Cornell Univ Pr 1975.

This collection of Black's papers covers a wide range of topics in logic, philosophy of language and aesthetics. In the first essay he attempts to determine what it is to be reasonable. The second examines the relationship of inductive rules to their success in practice. The third evaluates the thesis of the autonomy of practical reasoning. The fourth and fifth deal with logical paradoxes and sets. Grice's theory of meaning is attacked in Black's "meaning and intention."

BLACK, Max. *Language And Philosophy; Studies In Method.* Ithaca NY Cornell Univ Pr 1949.

Professor Black continues his studies of the relevance of semantics to some philosophic problems. He critically reviews the literature in the field and particularly the linguistic theories of Russell, Tarski, Wittgenstein, Morris, Ogden and Richards and Korzybski. He examines linguistic method in philosophy, vagueness, induction, the semantic definition of truth and similar topics which serve to round out the author's presentation of the present position of semantics in philosophy.

BLACK, Max. *Notes On Critical Thinking: A Companion To Critical Thinking.* NY Prentice-Hall 1952.

BLACK, Max. *Problems Of Analysis: Philosophical Essays.* Ithaca NY Cornell Univ Pr 1954.

This collection of fourteen essays, half of them unpublished hitherto, may be regarded as a sequel to the author's earlier *Language and Philosophy*. Only the first five essays in this volume, however, are specifically devoted to problems connected with language. The four chapters on Zeno's paradoxes constitute the fullest discussion of the subject currently available. There are three essays on induction; and two on logic; one entitled "Frege on Functions," and the other "Carnap on Semantics and Logic."

BLACK, Max. *The Labyrinth Of Language.* NY Praeger 1968.

BLACK, Max. *The Nature Of Mathematics: A Critical Survey.* Paterson NJ Littlefield Adams 1959.

BLACK, Max. A New Method Of Presentation Of The Theory Of The Syllogism. *J Phil* 42,449-455 Ag 45.

BLACK, Max and Gombrich, E H and Hochberg, Julian. *Art, Perception, And Reality.* Baltimore Johns Hopkins Pr 1972.

These essays are concerned with the nature of representation in art. On the other hand, Hochberg finds such an explanation unsatisfactory and offers as an alternative an explanation based upon a theory of perception which involves "skilled sequential purposive behavior." Related to this theory is the explanation of representation in the arts as concerning canonical forms of objects and encoded visual expectancies. Max Black's concern is with the linguistic analysis of representation or depiction in painting. His conclusion is that one cannot specify a necessary condition for this phenomenon because it is a cluster or range concept. This conclusion is drawn after an analysis of the appeal to causal history, resemblance, embodied "information," and the producer's intention as necessary conditions for representation.

BLACK, Max. Can Induction Be Vindicated? *Phil Stud* 10,5-16 1959.

This article goes into the "pragmatic justification" of induction, focusing on what the author calls the *formal step* and the *directive step* of the justification. The author describes the formal step as consisting of a demonstration that P is a *conditional performance procedure* for T, and the directive step as consisting of supplementary considerations for treating the proof supplied in the first step as sufficient reason for undertaking T. The author argues that a plausible interpretation of the task of inductive prediction demonstrates that there can be no conditional performance procedure for that task, so that the proposed vindication breaks down at the formal step.

BLACK, Max. Carnap's Semantics. *Phil Rev* 58,257-264 My 49.

BLACK, Max. Definition, Presupposition, And Assertion. *Phil Rev* 61,532-550 O 52.

BLACK, Max. Dewey's Philosophy Of Language. *J Phil* 59,505-522 S 62.

This paper considers what Dewey had to say about language and discusses relations between Dewey's work on language and contemporary studies of that subject. Given Dewey's conception of language as an instrument, his task becomes one of defining its purposes and delineating the mechanisms by which those purposes are achieved. It is in the spirit of instrumentalism itself to judge the instrumental method by its fruits, and that is what this study proposes to do. Special attention is drawn to Dewey's theories of meaning and communication. Difficulties for each are raised.

BLACKSTONE, William T (ed). *Philosophy And Environmental Crisis.* Athens GA Univ Georgia Pr 1974.

BLACKSTONE, William T (ed) and Ayers, Robert H (ed). *Religious Language And Knowledge.* Athens Univ Of Georgia Pr 1972.

This book is a collection of eight essays. "Religious Language" in the title indicates the volume's central focus: what is the truth—and life—value of religious affirmations?

BLACKSTONE, William T (ed) and Newsome, G L (ed). *Education And Ethics.* Athens Univ Of Georgia Pr 1969.

BLACKSTONE, William T. *Francis Hutcheson And Contemporary Ethical Theory.* Athens Univ Of Georgia Pr 1965.

An exposition and a critique of Hutcheson's moral sense theory, pointing out some of his confusions and inadequacies and tracing his differences with the rationalists of his time. His importance is said to lie in his relations to utilitarianism and to contemporary non-descriptive and non-cognitive moral theories. Notes and an index are included with the book.

BLACKSTONE, William T. *The Problem Of Religious Knowledge: The Impact Of Philosophical Analysis On The Question Of Religious Knowledge.* Englewood Cliffs NJ Prentice-Hall 1963.

In this book the techniques of modern analytic philosophy are applied to evaluate the cognitive content of religious sentences. It is admitted that many religious utterances do not have an informative purpose, but those that remain do satisfy a weak verifiability criterion. Evidence is relevant to their truth and they are thus cognitively meaningful. But this evidence is insufficient to establish their truth, and thus they do not constitute knowledge. However, they do satisfy certain purposes and psychic needs, and thus they are adhered to on a non-cognitive basis, in spite of disconfirming evidence and internal inconsistencies. There can be no pragmatic resolution of this disparity of acceptances, and certainly no rational resolution. Blackstone considers not only literal significance but also analogical and symbolic modes of predication.

BLANSHARD, Brand And Others. *Philosophy In American Education.* NY Harper 1945.

This book is a critical evaluation of the contemporary situation of philosophy and education, of the proper functions of philosophy in education and community life, and of ways for improving the teaching of philosophy. It presented by five members of the American Philosophical Association Commission on the Function of Philosophy on Liberal Education.

BLANSHARD, Brand And Others. *Philosophy In American Education: Its Tasks And Opportunities.* NY Harper 1945.

BLANSHARD, Brand. *On Philosophical Style.* Bloomington Indiana Univ Pr 1954. Professor Blanshard of Yale University discusses the difficult art of writing clearly about philosophical issues in a style of his own which is a model of what he is advocating: less technical jargon, frank but judicious employment of feeling, and more rhythm in the sentences. This book is a brief appeal for lucidity and readability. It is notable as probably the first book specifically on this subject by a distinguished philosopher.

BLANSHARD, Brand. *Reason And Belief.* New Haven Yale Univ Pr 1974.

Blanshard's book concerns the account of his philosophical reason relating itself to religious revelation and faith. Part I deals with Catholic teachings from Trent through Vatican II. Part II focuses on the succession from Luther and Kierkegaard to Brunner and Barth; the argument concentrates on the corruption of human nature, the incompetence of reason in revelational matters, the need for a leap of faith, and the discontinuity between natural and spiritual standards of goodness. Part III disengages morality from the theological bases and from the Jamesian will-to-believe. In Part IV, Blanshard presents his "rationalist alternative."

BLANSHARD, Brand. *Reason And Goodness.* NY Macmillan 1961.

Based on the Gifford Lectures of 1952-53, this monograph on ethical theory is one of the three books dealing with the role of reason in epistemology, ethics and theology. Reason is taken as characteristic of Greek philosophy, while love or feeling are typical of Christian thought. This antithesis is developed by contrasting stoic morality with that of St Francis. In the modern period, the dialectic of reason and feeling is traced through British ethics from the seventeenth to the twentieth century. Westernmarck's anthropological subjectivism is placed in antithesis to the duty ethics of W D Ross and associates. Emotive and noncognitive ethics is fully covered but Blanshard leaves little doubt that Sidgwick is the writer whom he most admires. The final third of the book outlines Blanshard's own views on the rational approach to ethical judgment. Among philosophical representatives of the use of reason: "Plato will be there, and St Thomas, and Spinoza, and Butler, and that most perfect exemplar of the reasonable temper, Henry Sidgwick."

BLANSHARD, Brand. *The Impasse In Ethics, And A Way Out.* Berkeley Univ Of Calif Pr 1955.

Blanshard's book contains a concise treatment of the present situation in ethical philosophy, elegantly stated and persuasively argued. The "impasse" in contemporary ethics has been occasioned by the criticism of ideal utilitarianism by the deontologists, the emotivists, and the naturalists. The "way out" is to be achieved by reformulating the tenets of ideal utilitarianism in the light of these criticism, especially the third; goodness, i.e., is to be counted a complex natural quality, "rooted in human nature."

BLANSHARD, Brand. *The Nature Of Thought.* NY Humanities Pr 1964.

These volumes offer a most carefully argued exposition and defense of philosophical idealism from the standpoint of the requirements of the nature of intelligible thought.

BLANSHARD, Brand. Reflections On Economic Determinism. *J Phil* 63,169-178 Mr 66.

Marx laid it down that "the mode of production of the material means of existence conditions the whole process of social, political and intellectual life." If this is true, objective philosophizing is impossible, since our conclusions will be functions, not of the evidence, but of our mode of getting a living. This will hold of Marx's own conclusion, which therefore discredits itself. Nor is it supported by the historical evidence. Widely differing philosophies have been produced by members of the same class, and the same philosophy by members of differing classes. The reply that Marx was speaking only of how classes think, not individuals, would make his theory

useless in explaining the history of philosophy. The reply that the economic factor was merely important, not exclusive, would rob his theory of its distinctiveness. Marx threw doubt on the possibility of disinterested thought, but it occasionally occurs, even among Marxists.

BLEHL, Vincent F. Freedom And Commitment In James's Portrait Of A Lady. *Personalist* 42,368-380 Sum-Jl 61.

This article explores the question of freedom in the novel. Two broad types of free acts are distinguished: those actions of the heroine, Isabel Archer, which follow up and prolong an initial option, and those which create it. The first type moves toward an end already accepted and ratified within an adhesion already more or less firmly established. They respect, develop and strengthen the initial commitment. There is another set of acts which puts the end itself in question. These acts constitute a decisive and fundamental option made in the light of value and response to value.

BLOCK, Irving. "Three German Commentators On The Individual Senses And The Common Sense In Aristotle's Psychology". *Phronesis* 9,58-63 1964.

This article is support for the argument of "The Order of Aristotle's Psychological Writings", *The American Journal of Philosophy* Volume 82, Number 325. There it is argued that the view of the relations between the individual senses and the commonsense in the *Parva Naturalia* represents an advance over the view held in the *De Anima*. In fact, the *De Anima* gives us an incomplete view of Aristotle on this question. An interesting and detailed discussion of this question and the various problems involved can be found in a discussion carried on by three 19th century German scholars, Herman Schell, C Baeumker, and J Neuhauser. Schell maintained the view of the *Parva Naturalia* that the individual senses are only aspects of the

common sense, while Baeumker raises a number of problems with this view from the text of the *De Anima*. Neuhauser defends Schell's view and criticizes Baeumker. The problems and inconsistencies of the text appear insoluble until one accepts the idea that Aristotle developed his ideas on this subject and the *Parva Naturalia* represents his final viewpoint.

BLOCK, Irving. Aristotle And The Physical Object. *Phil Phenomenol Res* 21,93-101 S 60.

How we become aware of physical objects over and above the perceptual acts of seeing color, shapes and hearing sounds, etc., is a question that has occupied many contemporary philosophers of sense-perception. Did Aristotle ever face this problem, and if he did, how did he deal with it? This article discusses this question and concludes that the answer to it can be found *De Insomniis* in Aristotle's discussion of dreams and illusions. There is an act affirmation (*phesin*) carried out by the controlling and discriminating sense (to *kurion kai to epikrion*) which does this. "For, speaking generally, the controlling power (*erxe*) affirms (*phesin*) the report given by each sense unless some more authoritative power contradicts it."

BLOCK, Irving. The Order Of Aristotle's Psychological Writings. *Amer J Phil* 82,50-77 1961.

The first part of this article is devoted to refuting the arguments of W D Ross and F Neyens that the view of the soul presented in the *De Anima* is essentially different and later than the one presented in the *Parva Naturalia*. The views are essentially the same, though, the views on the nature of sense-perception in general and on the nature and functions of the common sense in particular undergo important changes which indicate that the *Parva Naturalia* was written later than the *De Anima* and represents a more adequate and sophisticated view on the nature of sense-perception.

BLUMENFELD, Walter. Value And Valuation. *Phil Phenomenol Res* 21,314-332 Mr 61. It is maintained here that values are not substance like things in themselves, as autonomous entities or principles. The author opposes objectivism and idealistic philosophies. It is not merely that the subject produces values and lends them to objects; and it is not that values pertain directly to objects. Blumenfeld asks phenomenologically, what happens when a subject estimates certain things as valuable, and differentiates between such value qualities as: healthy, agreeable, interesting, true, just, morally good, sympathetic, aesthetically satisfactory, and holy, with their corresponding opposites. In each of the different categories of valuation there is a specific correlation between the object, the subject, the particular situation, and the society.

BLYTH, John W. *Whitehead's Theory Of Knowledge*. Providence RI Brown Univ 1941.

In this monograph Blyth analyzes the theory of perception that Whitehead presents in his *Process and Reality* and *Adventures Of Ideas*. Blyth investigates the consistency of three of Whitehead's main principles: the subjectivist principle, the ontological principle, and the principle of relativity, by showing how Whitehead uses them in

developing his theory of perception and judgment. Blyth discloses a number of serious contradictions in this theory, which issue, in the main, from the contradiction between the subjectivist principle and the definition of a duration.

BOAS, George and others. *Studies In Intellectual History*. Baltimore MD Johns Hopkins Pr 1953.

BOAS, George. *Dominant Themes Of Modern Philosophy*. NY Ronald Pr 1957.

Professor Boas presents a sympathetic exposition of those themes and traditions of the modern period (Machiavelli to Sartre) which he finds to have embodied "the most frequently recurring questions and the most influential answers." In so doing he breaks away from the "ritualized arrangement of philosophers and schools" which has come down from Hegel via Windelband, and places less emphasis than has been customary upon the German thinkers. Over two-thirds of his pages are devoted to the pre-Kantian modern period on the ground that the post-Kantian doctrines are relatively familiar.

BOAS, George. *Essays On Primitivism And Related Ideas In The Middle Ages*. Baltimore Johns Hopkins Pr 1948.

BOAS, George. *Giordano Bruno And The Hermetic Tradition*, By Frances A Yates. *Hist Theor* 5,82-86 1966.

BOAS, George. *Rationalism In Greek Philosophy*. Baltimore Johns Hopkins Pr 1961.

The author describes this as "a historical study of rationalism... in classical philosophy," concentrating on four subjects: "the distinction between appearance and reality, the method used to establish the distinction, the appraisal of life made by men studied, and something about their ethical theories." The book sees the history of classical rationalism as "a story of degeneration." In marking the turning-point midway in his study the author states: "The rational structures of Plato and Aristotle... were cemented by the mortar of logical consistency. Where they failed all rationalism must fail. The breaking point comes when the rationalist tries to deduce existence from essence, or, in more ordinary language, when the philosopher tries to show that the world of perception is as rational as that of logic."

BOAS, George. *Some Assumptions Of Aristotle*. Philadelphia Amer Phil Soc 1959.

BOAS, George. *The Acceptance Of Time*. Berkeley Univ Of Calif Pr 1950.

BOAS, George. *The Challenge Of Science*. Seattle Univ Of Wash Pr 1965.

In this fourth series of the John Danz Lectures, Boas surveys the challenge of science to the arts, to philosophy, and to religion. Science challenges the arts with such questions as what, in art, corresponds to "the universal and everlasting values of scientific truth," how one may "verify" an expression of personal experience; what justification there is for the "self-indulgence" found in lyrical expression; and whether lyricism leads to unintelligibility. Science challenges philosophy with such questions as what is the meaning of experience, of "the cosmos," of purpose in the behavior of living things, of dream impressions, and of responsibility and value in a mechanistic world. Science challenges religion with such findings as that ritual precedes rationalization, that religious formulations of ethical creeds command only lip service, that "plan" discovered in nature seems to be a reflection of the humanity of the finder, and that punishment commanded by religion does not reform the offender.

BOAS, George. *The Heaven Of Invention*. Baltimore Johns Hopkins Pr 1962.

A sustained argument for aesthetic subjectivity and relativism, which takes the Aristotelian position that all art is an artifact, but not the position that it imitates nature or anything else. The enjoyment of beauty is a value, but one which is learned, and what we find beautiful depends on our personality, our history, and our time. The two most important personality types are the submissive and the rebellious, so that a type of beauty forms a school and then changes. There is no predictable historical pattern; although the past of any art has a known pattern, we cannot anticipate the future. In the last analysis, no one can tell why he finds something beautiful, although he can tell what he attends to in enjoying its beauty. Thus, aesthetic criteria, such as symmetry, follow rather than control the sense of beauty.

BOAS, George. *The History Of Ideas*. NY Scribners 1969.

This book is an elementary introduction to some problems historians of ideas face, and more sophisticated historical sketches of ideas of The People, Monotheism, and The Microcosm. The introduction consists of accounts of metaphor in language, how ideas have histories, why ideas change, ideas as parts of systems of thought, the "periodization" of ideas, and the role of personality in the history of ideas. The author assumes: ideas may be held regardless of their relevance to economics, politics or religion; they make a difference; and they sometimes are inferred from other ideas and do not always arise from nonintellectual sources.

BOAS, George. *The Inquiring Mind*. La Salle IL Open Court 1959.

Epistemology is here approached from a systematic rather than an historical point of view. Boas recognizes that our experience is mediated by selective concerns and principles of interpretation, and emphasizes the role of consistency in organizing our knowledge.

BOAS, George. *The Limits Of Reason*. NY Harper 1961.

The author characterizes his essay as "highly skeptical of the claims of logicians and scientists." He "urges philosophers to recognize the disagreeable fact that even mathematics finds its premises and perhaps its structure too by means which are not ordinarily called logical." An initial distinction is made between experience and reason, and it is pointed out that "Insofar as there is a gap between the two realms,

reason is incapable of bridging it." Successive chapters contrast the "world of logic" and the "world of history" and discuss the roles of "basic metaphors," "myth" and "concentrated emblems" in human thinking. The author's final conclusion is that "the basic alteration of experience made by reason is the rejection of change" and "the rational portrait of things is an escape from the changing variety of direct experience." He adds: "The sphere of reason is supposed to exclude all religion, all art, all the peculiarly human interests of mankind. But rationality is itself an aspiration... guided by the very interests which it rejects."

BOAS, George. Ancient Testimony To Secret Doctrines. *Phil Rev* 62,79-92 Ja 53.

BOAS, George and Wrenn, Harold Holmes. *What Is A Picture?* Pittsburgh Pittsburgh Univ Pr 1964.

What is a picture? The authors attempt to answer this question by discussing a picture as design, as representation, as interpretation, as allegory, and as emblem. They conclude that a painting is a complex phenomenon which may fulfill an unlimited combination of purposes. Since painting means different things to different people, no one can be forced to see what the artist intended. The viewpoint of the artist and the observer must be kept distinct, and the observer has to interpret a picture for himself and classify it as he wishes in relation to his own interests. Furthermore, the critic must recognize that paintings are rarely completely good or bad regardless of the standards of excellence employed. Thus Boas and Wrenn offer a relativistic answer to the question posed—a picture is what the observer sees it as being at a given time in a given period. No absolute rules exist which establish what a picture should be.

BOCHENSKI, I M and Church, Alonzo and Goodman, Nelson. *The Problem Of Universals: A Symposium.* Notre Dame IN Notre Dame Univ Pr 1956.

The three papers brought together here were presented at the Notre Dame Aquinas Symposium, March 9-10, 1956. Alonzo Church's paper is a brief, partly historical, study of various understandings of "Propositions and Sentences." Nelson Goodman gives a well-written exposition and defense of his version of nominalism in "A World of Individuals." Father Bochenski's title essay alone is concerned with "The Problem of Universals"; this he breaks up into several levels and attempts to restate in terms of

symbolic logic and with reference to the ontological commitments implied in the various positions.

BOCHENSKI, Joseph M. *The Logic Of Religion.* NY New York Univ Pr 1965.

An eminent logician attempts in this book to begin a formalization of the rules of religious discourse. He disclaims, however, any justification of religious belief. He says that he is describing only "the idea of a logic of religion rather than offering a complete system," but theologians and traditional metaphysicians may find forbidding the heavy use of the terminology of contemporary logic and semantics (as, indeed, many ethical theorists find forbidding the terminology of deontic logic). There is, for example, an interesting treatment of the logic of analogy in which he remarks that most traditional authors have not "the slightest idea about a logic of relations."

BOCHNER, Salomon. Why Mathematics Grows. *J Hist Ideas* 26,3-24 Ja-Mr 65.

By tracing the dim origins of the concept of "mathematics" the author hopes to elucidate our understanding of the nature of mathematics. He points out that the earliest meaning of the term included a sense of universal knowledge, encompassing diverse areas of thought, such as myth, astrology, and natural science. The author claims that from the Sixteenth century on, mathematics has included abstractions from possibility; since abstractions from possibility are seen in increasing numbers of fields, the science of mathematics grows as well.

BOEHM, Rudolf. Basic Reflections On Husserl's Phenomenological Reduction. *Int Phil Quart* 5,183-202 My 65.

The article traces out the history of the evolution in meaning of the phenomenological reduction in Husserl's writings. The starting point is Husserl's conviction that what is lacking most to philosophy as well as to science is a truly rigorous scientific method. Already in the *Logical Investigations* (1901) the phenomenological reduction is presented as the core of this method. But here this reduction is understood as a deliberate restriction or limitation of the mind to what is adequately perceived in an "adequately fulfilling intuition" within the immanence of consciousness, excluding any transcendence. In his lectures on *The idea of Phenomenology* a significant expansion of the notion of reduction begins to appear. There is still the insistence on the absolutely given, but this now begins to include a certain "real transcendence" extending beyond the sphere of "real immanence to consciousness." This change appears first in his published works in the *Ideas* of 1913.

- BOGEN, James.** *Wittgenstein's Philosophy Of Language*. NY Humanities Pr 1972.
- In this study the author intends to shed light on the apparent discrepancy between the early and late Wittgenstein. His arguments for understanding these apparent discrepancies center upon the contention that the picture theory and its corresponding ontological doctrines grew out of Wittgenstein's attempt to explain how contingently false assertions are possible. The author argues that Wittgenstein abandoned the picture theory because of the problems which arise in explaining how an assertion and the fact which makes it true are related. In showing how the abandonment of the picture theory gives rise to the theory of language use the author discusses the theory of simple objects and facts, the topic of intentionality, the thesis that the sense of an assertion must be determinate, and Wittgenstein's later discussion of logical necessity and rules.

- BOLER, John F.** *Charles Peirce And Scholastic Realism: A Study Of Peirce's Relation To John Duns Scotus*. Seattle Univ Of Wash Pr 1963.
- This is a very useful study which goes beyond its modest title and tries to throw light on the question of how and why a pragmatist or pragmaticist like Peirce should stress his sympathy for the position of Scotus on universals. That the author finds Peirce's views entangling and complex is not surprising to any student of Peirce. Actually a good case can be made out for the propositions that Peirce is a confused nominalist, a confused extreme-realist (possibilities are real), a confused Hegelian (possibilities are Operative or effective in existence), and a confused pragmatist (universals are plans or habits of action). This book establishes that Peirce is also a confused scholastic realist. Perry remarks that pragmatism was born of James' misunderstanding of Peirce. Peirce's texts would justify the statement that, so far, all attempts to make an intelligible system out of Peirce's writings is based on a disregard or misinterpretation of important propositions he asserts.
- BOLER, John F.** Abailard And The Problem Of Universals. *J Hist Phil* 1,37–52 O 63.
- BOLER, John F.** Scotus And Intuition: Some Remarks. *Monist* 49,551–570 O 65.
- The thesis of this article is that Scotus makes a special contribution with his theory of intuition, not for giving new answers to the questions asked, for example, by Aquinas, but for asking different questions; and that the significance of this contribution cannot be appreciated until one sees why, with respect to the questions asked by Aquinas, Scotus is in (substantial) agreement with the Aristotelian analysis. The author tries, in an informal way, (1) to point out some confusions that have led to a misunderstanding of Scotus's (or anyone else's) defense of an Aristotelian account of abstraction, and (2) to isolate the phenomena that makes Scotus's theory of intuition suggestive.

- BONANSEA, Bernardine M (ed)** and Ryan, John K (ed). *John Duns Scotus, 1265–1965*. Washington DC 1965.
- Fifteen essays, none of which are by members of Duns Scotus' own order. These essays are on a wide variety of topics, including the life and works of Scotus, various broad or particular aspects of his philosophy, his influence on such as Suarez and William of Vaurouillon, and reports of current editorial efforts centered on the Scotistic remains.

BONANSEA, Bernardine M. Duns Scotus' Voluntarism. *Stud Phil Hist Phil* 3,83-121 1965.

The article, which has been conducted in the light of the most recent findings and the general context of Scotus' works, shows that Scotistic voluntarism is a well-balanced doctrine in which intellect and will are each assigned their specific role in accordance with the Augustinian-Franciscan conception of them. Such voluntarism is far removed from the extreme trends in various modern and contemporary philosophies and approaches the intellectualism of Thomas Aquinas, who in his later writings had already come closer to the position of the Franciscan school by assigning a more active role to the will in the act of volition. The contrast between Scotus and Aquinas is thus being reduced to its true dimensions.

BONANSEA, Bernardine M. The Ideological Argument For God's Existence. *Stud Phil Hist Phil* 1,1-34 1961.

The purpose of this article has been to present the ideological argument for God's existence in its historical background from its first appearance in Saint Augustine to the present time and to evaluate it on the basis of a sound criticism. The positions of both defenders and opponents of the argument are stated with complete fairness and objectivity. Some obscure points have been clarified, so as to pay the way for an impartial discussion of the two opposing views. This led the present writer to accept the argument as a valid proof of God's existence and reject the objections that have been raised against it.

BONANSEA, Bernardine M. The Political Thought Of Tommaso Campanella. *Stud Phil Hist Phil* 2,211-248 1963.

The essay is an analysis of Campanella's theory of the state in the light of his political writings and other pertinent works. The main contribution of this study consists in presenting a more realistic and comprehensive view of Campanella's political doctrine than has been done so far by most historians, who seem to consider "The City of the Sun" as Campanella's principal political work. The study shows the multiphase nature of Campanella's political theory, which includes three different, although not altogether incompatible, conceptions of the state. We believe to have proved that a great injustice is done to Campanella by those who present him as a harbinger of modern socialism and communism or as a champion of a purely rationalistic state theory.

BONANSEA, Bernardino M. (ed) and Ryan, John K. (ed). *John Duns Scotus, 1265-1965*. Washington DC Cath Univ Am Pr 1965.

This is the third and perhaps most important volume of "Studies in Philosophy and the History of Philosophy," a series that is gaining wide recognition for the seriousness of its purposes and the genuine scholarship of its contributions. A chief concern of the editors of this volume has been to present Scotus' thought and personality in their proper light and perspective. The work, which has been rated among the most authoritative sources of information in the field of Scotistic studies, condenses the results of long and painstaking research conducted by prominent Scotists throughout the world with varying academic backgrounds and different religious affiliations.

BONANSEA, Bernardino M. *The Theory Of Knowledge Of Tommaso Campanella: Exposition And Critique*. Washington DC Cath Univ Am Pr 1954.

The purpose of this study has been to investigate and evaluate Tommaso Campanella's theory of knowledge. The research has been conducted on Campanella's extensive philosophical writings, with the aim of arriving at an objective presentation of his thought. The pivotal point of Campanella's theory is that "cognoscere est esse." To know is the "esse" in the intimate structure of self-revealing being, whereas it becomes the "esse" in the possession of the external reality. Our study shows that Campanella's theory of knowledge is a syncretic doctrine which fuses elements of various philosophical systems into a unique and original synthesis, with principles drawn mainly from Thomistic and Augustinian streams of thought.

BONANSEA, Bernardino M. *Tommaso Campanella, Renaissance Pioneer Of Modern Thought*. Washington DC 1969.

BONANSEA, Bernardino M. "A Prime Instance Where Science Needs Religion" in *Science And Religion*, John C. Monsma (ed), 93-102. NY Putnam 1962.

The study discusses the relationship between science and religion in connection with the doctrine of creation. The notion of creation is developed along strictly philosophical lines, by emphasizing the need of removing from it all spatial and temporary imagery. It is further shown, on purely scientific grounds, that positive science not only cannot argue against creation, which is beyond its domain, but supports to a certain extent the creationist theory. It stresses the purely philosophical and theological nature of the problem at issue and sets the limits to the scientist's unrestrained yet justified ambition to unlock the secrets of the universe.

BONANSEA, Bernardino M. "Maurice Blondel: The Method Of Immanence As An Approach To God" in *Twentieth-Century Thinkers*, John K. Ryan (ed), 37-58. Staten Island NY Alba House 1965.

The specific purpose of this study is to present to the English-speaking world one of the leading and most controversial figures in the intellectual movement of the twentieth century. The study includes a discussion of the general theme of Blondel's philosophy, with special emphasis on his method of approach to God as found in "L'action" (1893), Blondel's first and most original work, and his trilogy: "La pensée," "L'Être et les êtres," and "L'action" (new version). The actual value of this study consists in stirring up the interest of philosophers in Blondel's system, which is a vigorous and original attempt to rethink man's basic philosophical problems from the point of view of his concrete life and his inner desires and aspirations.

BONANSEA, Bernardino M. Campanella As Forerunner Of Descartes. *Fran Stud* 16,37-59 Mr-Je 56.

The article attempts to show that Campanella is the first philosopher to feel the need of explicitly stating the critical problem as an introduction to philosophy, and that he anticipates Descartes in proclaiming self-consciousness as the basic principle of

knowledge and certitude. Our study indicates that the principal reason why Campanella and Descartes, so distant from one another in background, environment, training, and purpose, focused their efforts on the rehabilitation of knowledge is to be sought in the cultural climate of the time, which was dominated by humanists on the one side and the representatives of scepticism on the other side.

BONANSEA, Bernardino M. Duns Scotus And St Anselm's Ontological Argument. *Stud Phil Hist Phil* 4,128-141 1967.

BONANSEA, Bernardino M. Knowledge Of The Extra-mental World In The System Of Tommaso Campanella. *Fran Stud* 17,188-212 Je 57.

The present essay opens with a study of Campanella's concept of philosophy as an inquiry after truth, based on the testimony of God and the study of nature. It shows, in the second place, that the overemphasis placed by Campanella on sense knowledge is prejudicial to intellectual knowledge. The body of the article consists in proving that the Campanellian *cognoscere est esse*, which has been described as a battle-cry against medieval scholasticism and as an advance sign of modern idealism, does not represent a complete rupture with traditional scholastic teaching any more than it anticipates the idealistic philosophy. The article concludes with an evaluation of Campanella's doctrine.

BONANSEA, Bernardino M. Pioneers Of The Nineteenth-Century Scholastic Revival In Italy. *New Scholas* 28,1-37 Ja 54.

The study is a systematic and chronological account of the pioneering efforts of the leaders in the Italian scholastic revival that led to Pope Leo XIII's encyclical "Aeterni Patris" in 1879. The inquiry has shown that the revival in question was the result of a natural and steady development of Catholic thought rather than an imposition on the part of the Holy See, as hinted by some ill-informed historians. The article describes the role played by the principal contributors to the nineteenth-century scholastic revival and singles out for special consideration such major figures as Vincenzo Buzzetti, a somewhat forgotten man, Domenico and Serafino Sordi, Luigi Taparelli, Matteo Liberatore, Gaetano Sanseverino, and Joseph Kleutgen.

BONANSEA, Bernardo M. The Concept Of Being And Non-being In The Philosophy Of Tommaso Campanella. *New Scholas* 31,34-67 Ja 57.

The results of this inquiry in Campanella's metaphysics can be summarized as follows: 1) All things, whether spiritual or material, consist ultimately, although in different degrees, of power, knowledge, and love as their transcendental principles. These are called "primalties" and are found in creatures as well as in God, of whom creatures are faint imitations. 2) Whereas God is pure and infinite being, creatures are a composition of a finite and an infinite non-being. Just as a creature is essentially and necessarily a particular and limited entity, so it also is essentially and necessarily the non-being of all other things and of God Himself. Being and non-being concur to make up finite things, not as physical components, but as metaphysical principles.

BONDI, H. *Cosmology*. NY Cambridge Univ Pr 1952.

BONDURANT, Joan V. *Conquest Of Violence, The Gandhian Philosophy Of Conflict*. Princeton NJ Princeton Univ Pr 1958.

Dr Bondurant believes that the greatest demand on political theory at present is to develop "a theory of process and means, and not of further concern for structure, pattern and ends." As a means of fulfilling this demand, she presents a thorough study of the Gandhian technique of conducting non-violent conflict (*Satyagraha*). The book begins with a discussion of the basic precepts of the technique of *Satyagraha*—"Truth", "Non-Violence", and "Self-Suffering". It then proceeds to examine and analyze five *Satyagraha* campaigns led by Gandhi and others. The theory of *Satyagraha* is then related to Hindu tradition with an emphasis on Gandhi's innovations. Then conservative and anarchistic elements in Gandhi's thought are distinguished. The final chapter discusses Gandhi's philosophy of history and contrasts it with that of Marx and Hegel, and contains the author's own suggestions toward a general philosophy of action suitable for the West as well as the Orient.

BONTEMPO, Charles J (ed). *The Owl Of Minerva: Philosophers On Philosophy*. NY McGraw-Hill 1975.

This collection of essays by eighteen senior philosophers states how they view their discipline and its bearing upon today's world. The editors gather a wide spectrum of methods, areas of emphasis, and geographical distribution. White sees the philosopher's task as one of conceptual analysis, a second-order study of the statements directly made in everyday life and various disciplines. That such work is valuable in itself because of its epistemological clarification, is Wisdom's theme. Between them, Hampshire and Copleston urge that our source for analyzable statements be history of philosophy as well as present discourse. Quine and Lorenzen require philosophy to keep the constructive logical initiative, rather than wait upon the lead of other modes of discourse. Hook and Fisch and Marcuse agree upon the need for moral and political thought, in making philosophy relevant to our society.

BOOKSTABER, Philip David. *The Idea Of Development Of The Soul In Medieval Jewish Philosophy*. Philadelphia Jacobs 1950.

The author's thesis is that "Soul can be developed and that the individual may win or lose immortality of the Soul insofar as he is willing to recreate within himself the divine spark which is ever-present within him in *potentia*." In the book he discusses the writings of eight medieval Jewish philosophers, ranging from Isaac Ben Solomon Israeli to Moses Maimonides, in order to determine what these thinkers had to say on the Soul as "an active force within man's life."

BOON, James A. *From Symbolism To Structuralism: Lévi-Strauss In Literary Tradition*. NY Harper & Row 1973.

BOONIN, Leonard G. Concerning The Authoritative Status Of Legal Rules. *Ethics* 74,219-221 Ap 64.

BOONIN, Leonard G. Concerning The Defeasibility Of Legal Rules. *Phil Phenomenol Res* 26,371-378 Mr 66.

This article explores the meaning and significance of the concept of defeasibility as it applies to the analysis of legal concepts and the structure of legal decisions. An examination is made of H L A Hart's use of defeasibility and its relevance to the analysis of the law of contract. A distinction is drawn between two concepts of defeasibility and a complementary concept of "extendability" is introduced. A further distinction is made between the defeasibility of legal rules and the open texture of legal facts. It is argued that defeasibility is a fruitful concept in legal analysis, and that partly because of the defeasibility of legal rules, the traditional legal theory which treated legal decisions as logical deductions from legal rules is inadequate.

BOONIN, Leonard G. The Logic Of Legal Decisions. *Ethics* 75,179-194 Ap 65.

This essay seeks to characterize the logical structure of legal decisions and their justifications. The deductive model of legal reasoning is irrelevant to understanding the actual processes of decision making since it applies only after that process is completed. An examination of six types of cases enables the author first to distinguish several different kinds of legal reasoning and justification, second to describe different kinds of justifications of legal decisions, and third to establish a basis for studying the question of whether legal methods of justification are themselves rationally justifiable.

BOONIN, Leonard G. The Meaning And Existence Of Rules. *Ethics* 76,212-214 Ap 66.

BOORSTIN, Daniel J. *The Last World Of Thomas Jefferson*. NY Holt 1948.

The author furnishes a chapter in the history of American intellectual development by picturing for us the world of ideas as formulated in the minds of Jefferson and his circle: David Rittenhouse, Thomas Paine, Joseph Priestly, Benjamin Barton, Charles Peale and Benjamin Rush.

BOORSTIN, Daniel J. *The Mysterious Science Of The Law: An Essay On Blackstone's Commentaries*. Cambridge Harvard Univ Pr 1941.

Here is a detailed study of the famous Oxford lecturers, commenced in 1753 and published in four volumes, successively in 1765, 1766, 1762, and 1769. The ideas are grouped under three main heads: nature, reason and values.

BORNE, Etienne. The Meaning And Meaninglessness Of Suffering. *Phil Today* 1,98-101 Je 57.

BORNING, Bernard C. *The Political And Social Thought Of Charles A Beard*. Seattle Univ Of Wash Pr 1962.

Beard's faith in the progress of man, reason, democracy, science, the industrial revolution, technology, and freedom is traced through three periods: his early years as a student of politics, his "hope at high noon," and "his doubt at dusk." At first Beard stressed the economic determination of politics and history; then, ideas, decisions, and human values; and finally, "majority rule in a time span" and a preoccupation with American foreign policy. Beard's life and thought reflect the trends and crises of his times and are an instructive underscoring of some of the basic philosophic issues which confront man today—e.g., man, society, values, politics, history.

BOROWITZ, Eugene B. *A Layman's Introduction To Religious Existentialism*. Philadelphia Westminster Pr 1965.

BORSODI, Ralph. *The Definition Of Definition: A New Linguistic Approach To The Integration Of Knowledge*. Boston Sargent 1967.

The book is a short treatise on semantics, based on the maxim "one word, one meaning; one meaning, one word."

BOSLEY, Harold A. *The Philosophical Heritage Of The Christian Faith*. Chicago Willett Clark 1944.

The author displays an interest in the history of philosophy and the status of its contemporary problems especially as they relate to the realm of religious controversy. He points particularly to Plato, Aristotle and Plotinus "since they, beyond all other classical philosophers, are a decisive influence in the intellectual framework of the Christian faith."

BOSS, Medard. Ego, Motivation? *J Existent* 1,275-283 Fall 60.

BOSSART, William. Metaphysical Experience. *Rev Metaph* 15,34-50 S 61.

The author's purpose is to elucidate the experience of being which ontology presupposes. He first discusses the metaproblematic character of metaphysical experience, which has elements of both the subjectively pragmatic and objectively scientific approaches to reality. He then distinguishes logical and ontological necessity and argues that metaphysical propositions are hortatory and metaphorical; to illustrate this position, he examines Spinoza's formulation of the ontological argument. The author then considers the relationship between reason and passion and discusses dread, boredom, and joy as experiences of the unity of being. He closes with remarks on the relationship between metaphysical experience and ontological interpretation.

BOULDING, Kenneth E. *Conflict And Defense: A General Theory*. NY Harper 1962.

This book deals with conflict as a social process operating in many different contexts. Boulding uses formal analytic models to analyze social conflicts, with special emphasis on international conflicts. The method employed is mainly that of theoretical economics, and the basic theoretical structure comes from the theory of oligopoly. The first part of the volume is devoted to a general theory of conflict applicable to most cases, and the latter part to the application of theory to special cases with considerable emphasis on the differences in various types of conflict.

BOULDING, Kenneth Ewart. *Beyond Economics: Essays On Society, Religion, And Ethics*. Ann Arbor U1968.

BOULDING, Kenneth Ewart. *The Organizational Revolution: A Study In The Ethics Of Economic Organization*. NY Harper 1953.

BOULDING, Kenneth. *The Image: Knowledge In Life And Society*. Ann Arbor 1956.

This monograph by a social scientist was inspired by about a year's stay at the Center for Advanced Study in the Behavioral Sciences at Stanford, California. "Behavior," the author proclaims, "depends on the image". It is "the sum of what we think we

- know and what makes us behave the way we do." He traces the image through biology, psychology, sociology, economics and history, announcing finally what may be a "new science, eiconics" alongside, perhaps, cybernetics, with philosophical implications "in the direction of a broad, eclectic, organic, yet humble epistemology looking for processes of organization rather than specific tests of validity...." He hopes that "it looks beyond mechanism without falling into vitalism."

- BOURKE, Vernon J.** *Augustine's Quest Of Wisdom: Life And Philosophy Of The Bishop Of Hippo*. Milwaukee Bruce 1945.
Designed as an exposition of the philosophic thought of St. Augustine, this book uses biographical details as setting for his doctrinal development. The major treatises on his trinitarian psychology, philosophy of material nature, and politico-social views are analyzed in chapters XI to XIII. Augustine is presented as the first great philosopher in Christendom.
- BOURKE, Vernon J.** *Augustine's View Of Reality*. Villanova PA Villanova Univ Pr 1964.
This book examines the place of ontology in Augustine's thought. He was not a static essentialist but is in the background of some aspects of existentialism and phenomenology. Four appendices treat: participation, causality, analogy, and "in idipsum." Thirty-nine texts in Latin and English complete the documentation.

- BOURKE, Vernon J.** Moral Problems Related To Censoring Mass Communications. *Marquette Law Review* 40,57-73 1956.
This article criticizes prior censorship for philosophical reasons. Three principles of minority action are stated: (1) a minority group may censor materials considered harmful to its own members; (2) one minority group may not force censorship on a different group; and (3) any minority has the right to try to persuade its great society of the validity of its moral standards. These three rules were later popularized by John Courtney Murray.
- BOURKE, Vernon Joseph.** *Aquinas' Search For Wisdom*. Milwaukee Bruce 1965.
Stressing philosophical rather than theological themes, this work parallels Aquinas biography with his intellectual development. A theologian with a great interest in theology, he used classical sources to produce a new philosophy in the thirteenth century.
- BOURKE, Vernon Joseph.** *History Of Ethics*. Garden City NY Doubleday 1968.
This book treats ethical theories from the Pre-Socratics to the present. Analyses are brief but highlight the main features of western moral theory.
- BOURKE, Vernon Joseph.** *St Thomas And The Greek Moralists*. Milwaukee Marquette Univ Pr 1947.
This book attempts to show the extent of Aquinas' debt to Greek ethics, as represented by Plato, Aristotle, the Stoics and Plotinus, and to indicate how this classical morality was modified in the thirteenth century. Areas studied are: the psychology of moral activity (including twelve steps in moral decision), right reason as ethical norm, moral virtues as ethical categories. The book concludes that Thomas' borrowings from classical ethics are re-thought in terms of Christian supernaturalism.

The author attempts to sort out what Wittgenstein is doing in *The Blue Book*. He claims that Wittgenstein is teaching an art—an art of disentangling, of finding one's way when lost, of removal, of discussion, of exposure, of helpful reminder, of working puzzles, of freeing us from illusions, of clarification. There are, according to the author, three phases in this art: quickening the sense of the queer, presenting the meanings of those expressions which are relevant to exhibiting the sources of the queerness, and uncovering the misleading analogy.

- BOWER, William Clayton.** *Moral And Spiritual Values In Education*. Lexington 1952.
"Whatever organizational forms human life may take beyond mid-point in the twentieth century, it is certain that moral and spiritual values must be given greater substance if that life is to be more satisfying and less terrifying than in 1951," states R F McLain in his preface to this book. The manner of giving such values greater substance, in particular in the education of youth in the public schools, is the subject matter of the book. Moral and spiritual values are indigenous to the school community, the author asserts, and not to be injected into the school by some outside agency. The educational mission, therefore, must be to help teacher and pupil discover and develop these values as they are generated in the school experience.

The question—does man have freedom of the will? The authors of this book agree that this may be true. In a remarkably detailed way, the authors devote entire chapters to examining the various arguments that have been advanced, historically, to show that there are, sometimes, free choices. Other chapters are devoted to historical arguments that there are no free choices, and the arguments that "free

choice" and "no free choice" are compatible. The authors are convinced that the two positions are *not* compatible. The authors finally argue that sometimes people do make free choices.

BRADLEY, Raymond D. Geometry And Necessary Truth. *Phil Rev* 73,59-75 Ja 64. Bradley argues for the "old-fashioned" position that the sentences of pure geometry in general, and those of pure Euclidean geometry in particular, may be used to express necessarily true propositions. He defends this thesis against three objections. The first is that the sentences of geometry are not assertions at all; the second allows them the status of propositions but argues that they cannot be necessarily true because there are different, contrary geometries; and the third says that Euclidean geometry is false because of our discoveries about extra-galactic space.

BRADY, Jules M. St Augustine's Theory Of Seminal Reasons. *New Scholas* 38,141-158 Ap 64.

This article endeavors to explain the role of seminal reasons in Saint Augustine's metaphysics by proposing two questions. What is the relation between eternal reasons and seminal reasons? What kind of causality do the seminal reasons exert? After presenting Augustine's answer to these two questions the study compares his theory with the exemplary cause and the four causes. God through the eternal reasons is the efficient, exemplary and final cause of the creation, conservation and development of the seminal reasons. The seminal reason is a sort of secondary efficient cause of the development of beings below man and of the human body.

BRAMELD, Theodore. *The Use Of Explosive Ideas In Education: Culture, Class, And Evolution*. Pittsburgh Pittsburgh Univ Pr 1965.

A book showing how a rapprochement between academicians and educationists can be built by using philosophy as a bridge between what is relevant in the arts and sciences ("explosive ideas"), and what is relevant in educational practice. Each section devoted to an idea includes a chapter on its meaning, a chapter of philosophical analysis, and a chapter on how the idea would be applied to educational practice by four philosophies of education: essentialism, progressivism, perennialism, and reconstructionism (the author's).

BRAMELD, Theodore. *Toward A Reconstructed Philosophy Of Education*. NY Dryden Pr 1956.

As a sequel to his *Philosophies of Education in Cultural Perspective*, Professor Brameld of New York University takes sharp issue both with progressive and traditional education, arguing that social self-realization which "takes sides" is now called for, and that "powerful national and international purposes must be the governors of education." Numerous applications of this philosophy are explored, including the cases for both a Federal Education Authority in the United States and an International Education Authority. The book concludes with an imaginary dialogue between the author and four critics of his new educational philosophy.

BRAND, Myles (ed). *The Nature Of Causation*. Urbana 1976.

Intended as an introduction to central problems involved in the analysis of causation, this anthology begins with Hume's formulation of the regularity theory, moves through the principal lines of its criticism and development, and ends with some contemporary statements of the problem. A lengthy introduction by the editor provides the framework within which the articles following are grouped. For brand one of the central philosophical issues is the question of whether causation may be defined reductively. This theme is given extensive development and logical analysis in his introduction, and it provides the grouping indicators for the articles which follow. Brand prefers to refer to reductive attempts as 'extrasytemic', nonreductive as 'systemic'. The first section is devoted to various formulations of the regularity theory. The second section and the third section, devoted to the logical entailment theory, offers only one article by Brand Blanshard. The penultimate section is devoted to the systemic accounts, and is subdivided into two categories: the non-logical entailment version and the necessary-and-sufficient condition version.

BRANDT, Richard B (ed). *Social Justice*. Englewood Cliffs NJ Prentice-Hall 1962.

This is a collection of five essays in which social scientists as well as philosophers discuss various aspects of social justice.

BRANDT, Richard B. *Ethical Theory: The Problems Of Normative And Critical Ethics*. Englewood Cliffs NJ Prentice-Hall 1959.

This book is a detailed study of various ethical theories and related matter. The first chapter—"Ethical Theory: Its Nature and Purpose"—indicates an attempt to demarcate "normative ethics" and "critical ethics or metaethics." Having examined general topics, attention is returned in Chapter 7 "to the main task of critical ethics: to state the conditions under which an ethical statement is tenable, valid, or adequately supported, and to justify our conclusions about what these conditions are." Three alternate views—"naturalism," "nonnaturalism," and "noncognitivism"—are critically examined before the author's own views are stated in Chapter 10. A variety of ethical and cognate questions are examined in the last ten chapters. This book is one in the Prentice-Hall Philosophy Series. This suggests that it is designed as a textbook. It should be a useful one, although not for elementary courses. Notes throughout and reading lists at the end of each chapter enhance its overall high quality.

BRANDT, Richard. *The Philosophy Of Schleiermacher: The Development Of His Theory Of Scientific And Religious Knowledge.* NY Harper 1941.

Brandt holds that Schleiermacher's religious opinions become divested of obscurity to the extent to which his philosophical tenets are clarified, including his dualistic-realistic view of perception, his wavering between the correspondence and coherence theory of truth, his metaphysical doctrine that the Absolute represents an identity of the Real and the Ideal, his endeavor to establish the transcendental unity of thought and being, and his appreciation of science. Schleiermacher's place in the history of philosophy seems to be fixed with the pronouncement that in epistemology he is an empirical realist sophisticated by his study of Kant.

BRANDT, Richard and Kim, Jaegwon. Wants As Explanations Of Actions. *J Phil* 60,425-434 Jl 63.

The paper offers an analysis of wanting and of explanations of actions in terms of wants. It is primarily concerned to point out the extent to which the features described fit in with a conception of the explanations of actions conforming to the inferential (deductive or inductive) and nomological patterns of scientific explanation. If the analysis is plausible, at least in basic outline, then it is one good reason for thinking that explanations of actions in terms of wants do not differ from explanations in natural science, in inferential nomological pattern.

BRANDT, William J. *The Shape Of Medieval History: Studies In Modes Of Perception.* New Haven Yale Univ Pr 1966.

BRANICK, Vincent P. *An Ontology Of Understanding: Karl Rahner's Metaphysics Of Knowledge In The Context Of Modern German Hermeneutics.* St Louis Marianist Comm Ctr 1974.

Situated in the general problematic of the nature and method of the humanities, this study seeks to coordinate the concepts of hermeneutics with those of scholastic metaphysics in a search for the ontological meaning of interpretative understanding. The study surveys the hermeneutic theories of Schleiermacher, Dilthey, and particularly Gadamer, pointing out a general tendency towards metaphysical speculation and a general concentration on the themes of history, language, and psychic interiority. These themes are then used to sift through Rahner's interpretation of Thomistic metaphysics.

BRANN, Eva. The Music Of The Republic. *Agon* 1,1-117 Ap 67.

This article is an interpretation of Plato's *Republic* arguing that its central books also contain its central purpose, which is pedagogical—a conversion to philosophy—rather than the foundation of a provably unrealizable community. Interpretations of the mythical setting, the Divided Line, the Cave analogy and a number of other items are given.

BRANN, Henry Walter. A Reply To Walter Kaufmann's "Nietzsche In The Light Of His Suppressed Manuscripts". *J Hist Phil* 3,246-250 O 65.

BRATTON, F G. *Maimonides, Medieval Modernist.* Boston Beacon Pr 1967.

The author's purpose is to offer an appreciation of this universal thinker by a Gentile and "to show the ways in which Maimonides has left the christian world—as well as the Jewish—in his debt." The author traces the trials of Maimonides, the wandering Jew, in Morocco, Palestine and Egypt. He then follows the intellectual journey of the "Hebrew Aristotle" ("the perfect synthesis of Greek rationalism and Hebrew piety"), recorded in his 1168 *Commentary on the Mishnah*, the *Mishneh Torah* of 1180, the medical works he published from 1180-1200, and in his monumental 1190 work, *The Guide for the Perplexed*. In a chapter entitled *Thinker and Doer*, the author outlines the main themes of Moses' theology and philosophy. He subsequently shows his impact on the medieval Jewish world, on the Scholastics, on Gerson and Spinoza. Though much of Maimonides' method and output, according to the author, can only be regarded as obsolete, he remains for the modern world the model of the wise teacher, with his universal spirit and doctrine of the Golden Mean.

BRATTON, G. Liberalism: Dead, Dated Or Dormant? *Humanist* 4,168-172 Wint 44.

BRATTON, Lev. *Witness Of Decline: Albert Camus, Moralist Of The Absurd.* Cranbury NJ 1974.

In this study the author focuses his attention upon Camus's ethical values and the effect these have upon politics. He is also bent upon criticizing oversimplified interpretations of Camus' philosophy. In clarifying his views, the author divides Camus's writings into those of the formative years in which he discusses *Nuptials*, those of the cycle of the absurd where *Caligula* and *The Myth of Sisyphus* are discussed and the writings of Camus' mature years which encompass *The Plague* and

The Rebel. Finally, the author concludes by stating that Camus is a humanist who sees man as condemned to death yet who has within him the spark of Prometheus, i.e., consciousness and metaphysical freedom—the freedom to defy his condemnation to death and other injustices which plague him.

BRAYBROOKE, David (ed). *Philosophical Problems Of The Social Sciences.* NY Macmillan 1965.

BRAYBROOKE, David. *Three Tests For Democracy: Personal Rights, Human Welfare, Collective Preference.* NY Random House 1968.

This book sets forth three means of evaluation for a democracy, based on the premise that democrats are a species of utilitarian. The right to a livelihood (a modernization of Locke's right to property); welfare as food, safety, clothing, shelter, medical care, education, congenial employment, companionship (an extension of Bentham's happiness); and collective preference measured by the degree of coincidence between actual results and calculated theoretically better practices (a substitute for direct tests of majority mandate and bargaining) are discussed as together providing an adequate test. A bibliography and index are included.

BRAYBROOKE, David and Lindblom, Charles E. *A Strategy Of Decision: Policy Evaluation As A Social Process.* NY Free Pr 1963.

A philosopher and an economist here join forces to develop an improved strategy of decision and a rehabilitated utilitarianism. Despite the growth of literature in decision theory, keen dissatisfaction with that theory has often been expressed. The authors emphasize the disharmony between the actual practices of those making policy decisions and the idealized theories that are supposed to furnish guiding principles. A major difficulty is that the kind of situation required by the idealized theories just does not occur in practice. A new strategy of decision is proposed, therefore, that is based on the procedures actually used in successful decision making. In general, important problems are analyzed into a series of smaller problems which can be given separate treatment. At each successive stage it is possible to correct for undesirable consequences flowing from earlier decisions. Much emphasis is placed on the role of marginal advantages in the selection among alternatives.

BRAYBROOKE, David. Authority As A Subject Of Social Science And Philosophy. *Rev Metaph* 13,469-485 Mr 60.

BRAYBROOKE, David. Berkeley On The Numerical Identity Of Ideas. *Phil Rev* 64,631-636 O 55.

BRAYBROOKE, David. Personal Beliefs Without Private Languages. *Rev Metaph* 16,672-686 Je 63.

In the first part of this paper, the author considers the introduction of new terms and distinctions by introspective linguistic pioneers, and argues in response to Wittgenstein's objections that the notion of a private language for mental states does indeed make sense, if only as a hypothesis about the possibility of contingently unobserved semantic regularities. He also examines Hintikka's formalized treatment of the exemplary concept of belief. In the second part, reflecting on his own argument, he discusses the relationship between philosophy and linguistics; his remarks center on the philosophical usefulness of observed semantic regularities in ordinary language.

BRECK, Allen D (ed) and Yourgrau, Wolfgang (ed). *Physics, Logic, And History.* NY Plenum Pr 1970.

The authors include such scholars as Hermann Bondi, George Gamow, André Mercier, Arne Naess, Karl Popper, and Willard Quine. Topics range from very general historical problems to highly technical physical and logical questions. Each essay is followed by a brief transcript of the discussion of the paper.

BREDVOLD, L I. *The Brave New World Of The Enlightenment.* Ann Arbor . 1961.

BRÉE, Germaine. *Camus And Sartre: Crises And Commitment.* NY Delacorte Pr 1972.

BRÉE, Germaine. *Camus.* New Brunswick NJ Rutgers Univ Pr 1959.

The thought of Camus is presented here as the product of a literary rather than a philosophical mind. Technical philosophy is neither his *métier* nor his proper concern;

and though he took part in the resistance movement in France during the Nazi occupation, Camus' strength is not held to be in active politics or even in the life of action. His own being, his creative efforts, his work in the theatre—these have been at the center of his existence, an existence whose major theme for meditation has been the life of the artist in society and in history. The background and development of Camus' career are traced in detail, and analytic studies of all of his writings are presented. The author has had access to Camus' personal notebooks and other unpublished material. Camus is treated as a major writer of our time. His *The Plague* is "within its limits, a great novel, the most disturbing, most moving novel yet to have come out of the chaos of the mid-century." And Camus himself is seen as an artist *en route*, developing and enriching his essential themes and now poised for his finest effort.

BREGLIO, Louis A. *Life And Criticism Of Francesco De Sanctis*. NY Vanni 1941.

The first part of this volume is a careful outline of the main facts of De Sanctis's life; the second an analysis of his theory and practice of criticism. The volume concludes with an essay by Giuseppe Prezzolini on *The Protestant Influence on De Sanctis's Literary Criticism*.

BREISACH, Ernst. *Introduction To Modern Existentialism*. NY Grove Pr 1962.

This general survey of existentialism attempts to appraise its impact on the current scene, especially as it relates to the American context. Breisach not only provides summary exposition of the main existentialist writers, but he also touches the key aspects of existentialist philosophy, including the problem of an authentic existence for the individual.

BREMOND, André. Hints On Risibility. *Mod Sch* 17,29–30 Ja 40.

BREMOND, André. Leon Brunschvicg's Religion Of The Spirit. *Thought* 15,281–299 Je 40.

BRENDER, Myron. Hospers On Psychoanalysis: A Critique. *Phil Sci* 32,73–83 Ja 65. This paper examines John Hospers' "Defense of the Scientific Status of Psychoanalysis" as it was presented in the *Proceedings of the Second Annual Meeting of the New York University Institute of Philosophy*. In it I attempt to demonstrate that Hospers (a) misunderstood the thrust of his opponents' critique, (b) argued invalidly on several crucial issues, and (c) neglected to take into account the possibility of alternative explanations. I conclude that my analysis succeeds in identifying most of the salient weaknesses in Hospers' position, while also proposing some positive measures for evaluating the scientific status of psychoanalysis.

BRENNAN, Bernard P. *The Ethics Of William James*. NY Bookman 1961.

By synthesizing the moral implications of William James's statements on metaphysics, religion, and epistemology—and, of course, those on specifically ethical topics—the author shows that in at least one type of pragmatism a system of ethics can be constructed. Moreover, it is demonstrated that James's pragmatism, radical empiricism, anti-intellectualism, romanticism, voluntarism, and pluralism act and interact to form a philosophy of conduct which rises above the selfish, practical, and useful to the level of sanctity, where man achieves his highest development.

BRENNAN, Bernard P. *William James*. NY Twayne 1968.

BRENNAN, J G. On Nagel's Reconsideration Of Naturalism. *J Phil* 53,443–447 Jl 56. This is a criticism of Ernest Nagel's "Naturalism Reconsidered" (1955). The usefulness of the word 'naturalism' in philosophy is questioned as well as alleged excessive narrowness of 'knowledge' as defined in naturalistic terms.

BRENNAN, Joseph Gerard. *Thomas Mann's World*. NY Columbia Univ Pr 1942. The book is a survey of Thomas Mann's work to 1942 with particular reference to Mann's philosophy of art and the artist. Subjects discussed include alienation of the bourgeois artist; art and disease; music and the romantic; art and morality; politics and the artist; art, nature, and spirit. In original form, the book was a dissertation presented for Ph. D., at Columbia University.

BRENNAN, Joseph Gerard. *Three Philosophical Novelists: James Joyce, André Gide, Thomas Mann*. NY Macmillan 1964.

Philosophical implications in the work of James Joyce, André Gide, and Thomas Mann are examined with specific reference to texts. Semi-playfully, Joyce is taken as Scholastic logician, Gide as Epicurean moralist, and Mann as Goethean metaphysician.

BRENNAN, Joseph Gerard. Alienation Of The Modern Artist: A Problem Of Social Context. *Paumanok Review* 3–7 Spr 62.

This article is about philosophical and social explanations of estrangement of artist and writer from contemporary society. Various theories, including Marxian, are considered.

BRENNAN, Joseph Gerard. Delius And Whitman. *Walt Whitman Review* 18,90–95 S 72.

This book contains the philosophy of personal individualism in the work of the English composer Frederick Delius and his use of relevant texts from poetry of Walt Whitman.

BRENNAN, Joseph Gerard. Novels And Morals. *Barnard Alumnae Magazine* Volume Unknown Fall 65.

This article is about the ethical and moral preoccupations of certain writers of the 1950's including Saul Bellow, Bruce Jay Friedman, Bernard Malamud, and Edward Wallant. Anticipation of these themes by Nathaniel West in the 1930's. The question as to whether preoccupation with such moral themes is characteristically Jewish-American or not is considered.

BRENNAN, Joseph Gerard. The Role Of Emotion In Aesthetic Experience. *Quarterly Journal Of Speech* 40,422–428 D 54.

This article is a critical examination of writings of I A Richards, Susanne Langer, and Eliseo Vivas on art and emotional response.

BRENNAN, Joseph Gerard. Three Musical Amateurs: Nietzsche, Mann, Hesse. *Peabody Institute Notes* Volume Unknown Ja 71.

Ideological and personal attitudes of a philosopher and two novelists are markedly

influenced by him. All three and their concern with music are examined against the background of late nineteenth century German culture.

BRENNAN, Joseph Gerard. Three Novels Of Dépaysement. *Comparative Literature* 22,223–236 Sum 70.

The theme is centered around the moral change by removal from routine and ordinary surroundings in André Gide's *L'Immoraliste*, Henry James's *The Ambassadors*, and Thomas Mann's *Der Zauberberg*. Unexpected similarities are found in the treatment of the theme in the three novels concerned.

BRENNAN, Joseph Gerard. Two Concepts Of Death. *Religion In Life* 1–6 Autumn 48.

Certain humanist or naturalist attitudes toward death are considered more scientific than the religious view—yet they obscure death's tragedy with sentimental optimism. A "Humanist Funeral Service" is offered in evidence.

BRENNAN, Joseph X and Gross, Seymour L. The Problem Of Moral Values In Conrad And Faulkner. *Personalist* 41,60–70 Wint–Ja 60.

BRENNAN, Robert Edward (ed). *Essays In Thomism*. NY Sheed & Ward 1942.

While every section of the philosophic field is represented there is quite properly a weighting in favor of metaphysics. With the possible exception of Monsignor John A Ryan's essay on Thomistic economics all the contributors approach their subjects from the strictly philosophical viewpoint. The essays are about equally divided between the theoretical and the practical.

BRENNAN, Robert Edward. *The Image Of His Maker, A Study Of The Nature Of Man*. Milwaukee Bruce 1948.

BRENNAN, Robert Edward. *Thomistic Psychology: A Philosophic Analysis Of The Nature Of Man*. NY Macmillan 1941.

This textbook on St Thomas' philosophy of man incorporates several novelties of method. One innovation is found in the emphasis on a preliminary study of the psychology of Aristotle. Another novelty is the use of carefully selected English passages from St Thomas as "clarifications" of the matter covered in each chapter. New, too, is the bibliographical section, which is not strictly speaking a book-list but an appendix of references and notes. The epilogue deals with the relations between contemporary psychology and Thomism. It offers a re-interpretation of much of the data of modern empirical psychology.

BRENNAN, Robert Edward. Walter Farrell, O P: *Apud Posteris Sacer*. *Thomist* 15,199–208 Ap 52.

BRESSAN, Aldo. *A General Interpreted Modal Calculus*. New Haven Yale Univ Pr 1972.

A quantified modal logic developed by a mathematical physicist with an eye to problems of conceptualization of some parts of theoretical physics. The book provides a semantical analysis of a general modal language, the construction of a modal calculus valid in that language, and a discussion of the elementary possible cases, intensional descriptions, and completeness in the calculus. The analysis of predication, which does not require predication to be extensional, and that of absolute attributes are the foremost innovations claimed. Notes, appendices, bibliography, list of symbols, and index of subjects are included for reference.

BRETTALL, Robert W (ed) and Kegley, Charles W (ed). *Reinhold Niebuhr, His Religious, Social, And Political Thought*. NY Macmillan 1956.

Beginning with an "Intellectual Biography," this book allows a number of distinguished philosophers, theologians, political scientists, and historians to analyze and criticize R Niebuhr's contribution to these diverse fields.

BRETTSCHNEIDER, Bertram D. *The Philosophy Of Samuel Alexander: Idealism In "space, Time And Deity".* NY Humanities Pr 1964.

A thorough critical analysis of Alexander's entire philosophy. Brettschneider compares Alexander point by point to Bradley, and argues that, in all essentials, their philosophies are the same. In spite of Alexander's denials, both are objective idealists. Alexander claims to be a realist because he bases his metaphysics on an "empirical" analysis of "Space-Time." In his superficial realism Alexander supposes that he arrives at the primordial metaphysical stuff of Space-Time by a kind of phenomenological reduction. But Brettschneider thinks that close study reveals that Space-Time corresponds to nothing in our experience and is a product of merely intuitional method. Alexander's Space-Time is the synthesis in which all perspectives of space-time are internally related. Such a synthesis, Brehnschneider holds, amounts to an Absolute based on the doctrine of internal relations. He also holds that every aspect of Alexander's philosophy is based, as objective idealisms are based, on the concept of coherence. Not only his concept of truth is so based, but also his theories of perception, value, emergence, and deity.

BRIGHTMAN, Edgar Sheffield. *A Philosophy Of Religion.* NY Prentice-Hall 1940. In these pages we have a magistral examination of religion in its relation to the entire life of man today. The central thesis of this book is a philosophically grounded belief in a personal finite God, finding at present its most intense antithetical expression in the authoritarian neosupranaturalism of Barthian theology.

BRIGHTMAN, Edgar Sheffield. *Nature And Values.* Nashville 1945.

BRIGHTMAN, Edgar Sheffield. *Person And Reality, An Introduction To Metaphysics* (edited by Peter Anthony Bertocci And Others). NY Ronald Pr 1958.

This posthumous publication presents an exhaustive treatment of metaphysical problems. The book begins with a discussion of the goal and method of metaphysics, and then goes on to distinguish the categories of being: time, space and motion, cause, substance, person, and purpose. The last half of the book presents a detailed analysis of realms of being. These include essence, nature, persons, and value. The concluding arguments offer an extended consideration of theological issues: God, evil, and religious experience.

BRILL, John. *The Chance Character Of Existence.* NY Philosophical Lib 1956.

The study of evolution, hitherto restricted to the development of species, is here extended to other phases of existence, including the human situation. This reveals that man is completely dependent upon the conditions of his existence. The universe, in which no trace of purpose or order can be found, is "a gigantic heterogeneity of chance occurrences, and the movement of atoms of which it is composed is unpredictable." Successive chapters trace the philosophical, scientific, ethical, sociological, cultural, religious and political implications of such a universe.

BRKIC, Jovan. *Norm And Order: An Investigation Into Logic, Semantics, And The Theory Of Law And Morals.* NY Humanities Pr 1970.

norm and Order deals with applications of logic, semantics and linguistics to problems of legal and moral discourse. A particular stress is laid on demonstrating the relevance of the former to the latter, not on the basis of imagined legal and moral issues, but on the concrete work in jurisprudence and descriptive ethics. *norm and Order* examines sequentially: (1) the logic of declarative, deontic and imperative sentences; (2) semantic problems of normative discourse and the ontology of

normative concepts; and (3) subsumption methods for normative concepts, creation and evaluation of normative rules as well as legal and moral codes.

BROAD, Charlie Dunbar. *Broad's Critical Essays In Moral Philosophy,* David R Cheney (ed). NY Humanities Pr 1971.

The essays presented here, represent the whole of Broad's expressed critical thought on ethical topics, with the exception of two papers which duplicate the content of certain of the essays included.

BROAD, Charlie Dunbar. *Five Types Of Ethical Theory.* Paterson NJ Littlefield Adams 1959.

BROAD, Charlie Dunbar. *Induction, Probability, And Causation.* NY Humanities Pr 1968.

Contained in this volume are Broad's three main writings: "The Relation between Induction and Probability," dealing with the logical and extra-logical assumptions involved in inductive reasoning and the relationship of probability thereto; "The Principles of Problems Induction," emphasizing the role of equiprobability, causal premises, loading and stating the Principle of Limited Variety in terms of a theory of generators; and, "The Principles of Demonstrative Induction," which develops a logic of conditions. Here Broad also gives a formal statement of Mill's methods and an elaboration of W E Johnson's "figures of induction." The volume also contains Broad's important critical reviews of the work of J M Keynes, W E Johnson, R von Mises, and W Kneale. In an article on causation Broad examines both the regularity and entailment analysis, and in his "Reply to My Critics," the logic of conditions is developed, and induction and laws of nature are treated. Also included is an article by G H von Wright which thoroughly summarizes Broad's contributions on induction and probability.

BROAD, Charlie Dunbar. *The Mind And Its Place In Nature.* Paterson NJ Littlefield Adams 1960.

BROADBENT, D E. *Behavior.* NY Basic Books 1961.

The author traces the evolution of the behavioristic approach to psychology. His discussion includes the contributions of behaviorists from Watson to the present day. There are references both to particular psychological experiments and to methodological issues, which arise on the borderlines between psychological theory and philosophy.

BRODSKY, Garry M. Dewey On Experience And Nature. *Monist* 48,366-381 Jl 64.

This paper defends Dewey's theory of experience against charges that it is anthropomorphic and idealistic. I argue that Dewey's claim that predicates such as "confused," and "cheerful," are to be applied primarily to situations and only secondarily to human selves does not amount to the attribution of human properties to nature because a situation, according to Dewey, is a natural complex which contains a human being as one of its components. Dewey's principle of continuity asserts not ontological idealism but the need to frame ultimate categories so that no rigid oppositions emerge in the first place. Finally, I consider and refute the charge that "experience" is an all-inclusive term in Dewey's vocabulary and so, that his claim to have overcome the gulf between experience and nature is trivial.

BRODTKORB JR, Paul. *Ishmael's White World: A Phenomenological Reading Of Moby Dick.* New Haven Yale Univ Pr 1965.

This is, as the subtitle indicates, "A Phenomenological Reading of *Moby Dick*." The author pursues, in close touch with Melville's text, "a descriptive analysis of the Ishmaeleen consciousness," in which the use of phenomenology... "assumes no more than that what defines this book's narrator as narrator is after all what he narrates and how he narrates it." The phenomenological theme, then, is Ismael's "reconstitution of his world and self." Among the central topics examined in the chapters are "World," "Body," "Others," and "Time." "Ismael's book," it is concluded, "is founded in his own boredom, dread, and despair. These moods are the unity of his consciousness, and of his book."

BRODY, Baruch A. *Abortion And The Sanctity Of Human Life: A Philosophical View.* Cambridge MA MIT Pr 1975.

BRODY, Howard. *Ethical Decisions In Medicine.* Boston Little Brown 1976.

The ethical method Brody calls "a sort of rule-consequentialist ethics, which, unlike utilitarianism, refers one to a set of personal values instead of to the general happiness as the final criteria." The primary ethical goal stated is the survival of a human culture within which those personal values can be realized. Brody sees our present Western culture as "leading us down the road to certain catastrophe" and thus concludes that we must build a new culture. Appendices include a discussion of utilitarian and deontological ethical methods; a Patient's Bill of Rights; Joseph Fletcher's Criteria for Determining Quality of Life; the Declaration of Helsinki on clinical research; and a model Living Will. There are references and suggested readings, a self-evaluation test, and an index included.

BROMBERGER, Sylvain and Grunbaum, Adolf and Nagel, Ernest. *Observation And Theory In Science.* Baltimore Johns Hopkins Pr 1971.

This book contains three lectures: Nagel, "Theory and Observation," Bromberger, "Science and the Forms of Ignorance," and Grunbaum, "Can we ascertain the Falsity of a Scientific Hypothesis?" Nagel's essay is concerned with refuting some of the specific objections recently raised against the observation-theoretical distinction and its philosophical relevance. He argues that the thesis that observation terms are theory laden is compatible with the above distinction, as well as rejecting the charge that the theory laden character of observation terms prevents theories from being put to a fair test. Bromberger's paper takes issue with the Hempelian account of the structure of scientific theories and scientific explanations. He urges an alternative model based on the 'logic of questions' which is claimed to avoid some of the conceptual difficulties of the Hempelian position as well as more adequately reflecting actual scientific practice.

BROMBERGER, Sylvain. Questions. *J Phil* 63,597-605 O 66.

The article discusses: (1) some of the requirements which two languages L/d1/r and L/d2/r must jointly satisfy to be capable of serving simultaneously as the medium through which a given science can evolve, and (2) some problems raised by those requirements.

BRONAUGH, Richard N. Freedom As The Absence Of An Excuse. *Ethics* 74,161-173 Ap 64.

Although moral responsibility requires freedom, the relevant kind of freedom is not the absence of scientific causes, but a kind which would indicate the existence of moral evidence permitting an ascription of responsibility for some morally relevant act. Moral judgments not only decide the moral qualities of actions, but at the same time decide the question of responsibility or freedom. An agent is always thought to have acted freely when there is an excuse available to him. Since the presence of excuses is a moral consideration, the question of freedom is not factual but moral.

BRONOWSKI, J. *The Common Sense Of Science.* NY Random House 1960.

BRONOWSKI, J. *The Identity Of Man.* Garden City NY Natural History Pr 1965.

Man differs from machines, according to Bronowski, in a number of respects. For example, (1) a machine's behavior is reliably predictable, whereas a man's behavior—although it exhibits some degree of consistency (in keeping with what is "characteristic" of the individual)—is never perfectly predictable. (2) Man "relates" to other people with appreciation of their feelings; a machine does not. (3) Our senses functionally "doctor" their messages before sending them to the brain; a computer does not do this. The self, he adds, is a process, not an essence. Knowledge, according to the author, is a rearrangement of experience, in which we put together those experiences that seem to us to belong together. Moreover, in knowing, the brain operates on a basis of probability rather than conclusive deductions; the latter system would require more brain cells than the skull has room for. Finally, since man participates in making the truth which he "finds," we cannot in the natural sciences reach a certainty which is not there to be reached.

BROWN JR, Stuart M. C I Lewis's Esthetics. *J Phil* 47,141-149 Mr 50.

An Analysis of Knowledge and Valuation is examined with exposition and criticism focusing upon the value theory of C I Lewis's esthetics. The author "focuses upon questions of fact only in order to reveal a logical difficulty with important consequences for esthetics as a philosophical study."

BROWN JR, Stuart M. Civil Disobedience. *J Phil* 58,669-680 O 61.

After distinguishing acts of civil disobedience from typical cases of crime and from acts of civil rebellion, the author questions whether civil disobedience can ever in principle be justified. He argues that, in order to be justified, acts of civil disobedience must meet three conditions: (1) persons may not be harmed, and property may not be destroyed; (2) there must be unconditional submission to arrest and to the legal penalties for the breaches; and (3) the protest, in the course of which the breaches occur, must be directed at constitutional defects exposing either all the people or some class of people to legally avoidable forms of harm and exploitation.

BROWN JR, Stuart M. Has Kant A Philosophy Of Law? *Phil Rev* 71,33-48 Ja 62.

Brown argues that Kant has no philosophy of law, in the sense that his opinions on legal and political questions cannot be justified by using the principles to which his moral philosophy commits him. Kant could have constructed a philosophy of law if he had been able to explain how the Categorical Imperative may be used to test the moral status of rules in a body of positive law. But he could not do this because his obsession with the role of pure rationality in ethics left him with no principles other than formal consistency to serve as criteria of morally good and bad laws.

BROWN, Harold I. *Perception, Theory And Commitment: The New Philosophy Of Science*. Chicago Precedent 1976.

An examination of historical philosophy of science and its relation to logical empiricism. It is argued that both science and philosophy of science consist of research projects under the guidance of accepted presuppositions and that revolutions take place when these presuppositions are changed. The commitment to empiricist epistemology and principia logic as the basis for the philosophical examination of science are the central presuppositions of logical empiricism, and the role of these presuppositions in generating problems and criteria for acceptable solutions is examined. The research problems and epistemology of the new approach are then analyzed.

- BROWN, Merle E.** *Neo-Idealistic Aesthetics: Croce-Gentile-Collingwood.* Detroit 1966.

The author asks is it worthwhile to deal with Croce, a thinker who is "inconsistent, vacillating, and obscure." He evidently feels that it is worthwhile, for he goes on to discuss Croce's early and mature philosophy. Originally Croce erroneously conceived of art as both simple and complex, as both knowledge and action. It was Giovanni Gentile who initiated a philosophical movement, Actual Idealism, which corrected the weaknesses of Croce's thought. Gentile integrated his ideas into a true dialectal unity of three terms while Croce, a separatist, employed only two terms. As a result of the controversy between these two thinkers, Croce achieved a fragile synthesis of simplicity and complexity. But while Croce's and Gentile's theories differ, they are fundamentally one! Croce's theory of cosmic art is based on Gentile's actualistic logic, while Gentile's theory of self-translation is based on Croce's mature aesthetics. Alone Croce's view is confused; alone Gentile's theory is arid. But considered together, nothing in the entire history of aesthetics comes close to the richness and clarity of their views.

- BROWN, Merle E.** Croce's Early Aesthetics: 1894-1912. *J Aes Art Crit* 22,29-42 Fall 63.

- BROWN, Milton Perry.** *The Authentic Writings Of Ignatius; A Study Of Linguistic Criteria.* Durham NC Duke Univ Pr 1963.

The author starts out with the "longer" Ignatian corpus and proceeds to test the working hypothesis about the generally accepted division of this corpus between seven genuine letters and five spurious ones, the latter known as "Pseudo-Ignatius." Brown's aim is not only to confirm the authenticity of the genuine writings of Ignatius, the early second-century Bishop of Syrian Antioch, but equally so to establish the value and utility of the linguistic and stylistic tests he uses. The claim is made that the criteria are conclusive in all cases of Ignatius except the letter to Polycarp, where definitive results cannot be obtained. The author is well aware of the limitations of the stylometric tests and makes careful use of whatever indications they provide.

- BROWN, Patterson.** A Medieval Analysis Of Infinity. *J Hist Phil* 3,242 O 65.

- BROWN, Patterson.** Infinite Causal Regression. *Phil Rev* 75,510-525 O 66.

Brown explains the reasoning behind the medieval Aristotelian argument against the possibility of an infinite series of causes ordered per se. In such a series, the constituent relations are transitive; and so if a is caused by b and b is caused by c, then a is caused by c. To say that such a series is infinite is to postpone forever giving a cause for a, and thus to render a unintelligible.

- BROWN, Patterson.** St Thomas' Doctrine Of Necessary Being. *Phil Rev* 73,76-90 Ja 64.

Brown argues that Aquinas has been widely misinterpreted on his doctrine of necessary being. He did not hold that everything in the world was contingent, nor that a necessary being must be an infinitely perfect being; and by "necessary being" he did not mean "logically necessary being." For Aquinas a necessary being was a being which was neither generable nor corruptible. Brown goes on to elucidate Saint Thomas' Third Way in light of a correct interpretation of his notion of necessary being.

- BROWN, Robert F.** *The Later Philosophy Of Schelling: The Influence Of Boehme On The Works Of 1809-1815.* Lewisburg PA Bucknell Univ Pr 1977.

After his initial expression of transcendental idealism, Schelling came increasingly under the influence of Boehme. Part One outlines the thought of Boehme in the four areas that affected Schelling: the inner life of God, the process of creation, the nature of evil, and human nature within which all the other polarities get expressed. Part Two analyzes Schelling's philosophy during the years 1809-1815, in its three major expressions. In the treatise *Of Human Freedom*, Schelling wrestles with the question of evil. In his *Stuttgart Lectures* and his replies to Jacobi and Eschenmayer, Schelling continues to use concepts drawn from Boehme in order to clarify difficulties about human freedom's relations with God and nature. Finally, *The Ages of the World* plunges even deeper into the dipolarity of the divine life, the free decision of creating, and the emergence of various "powers" in the world's creation.

- BROWN, Robert.** *Explanation In Social Science.* Chicago Aldine 1963.

The author, educated in anthropology and philosophy, begins with an examination of common complaints against social scientists, including the charge that social scientists offer mere descriptions rather than genuine explanations. Explanation is distinguished from description and reporting, and the major portion of the book is devoted to a discussion and examination of the types of explanation found in the social sciences, and their relationships. There are chapters on genetic explanations, intentions, dispositions, reasons, functions, empirical generalizations, and theories. Examples from sociology, anthropology, psychology, history, demography, political science, and economics are included. Rather than discussing the general arguments of those who maintain that a natural science of society is impossible, countervailing examples of scientific explanations and predictions of social behavior are used to

refute that view. The author holds that social explanations, conforming to the requirements for good scientific explanation in general, are possible.

- BROWN, Robert.** Self-justifying Statements. *J Phil* 62,145-149 Mr 65.

Are statements about one's own psychological attitudes and states self-justifying? Chisholm has answered "yes," claiming that such statements exhaustively record their own evidence. This is mistaken. For I can always be incorrect in thinking that I have a particular belief or desire, since it is sometimes possible in fact to produce evidence against my claim, and it is always logically possible to do so. My assertion that I have a particular belief or attitude neither ensures that I do nor ensures that I have identified it correctly. Arguments to the contrary take the occurrence of an attitude to supply it with either the whole or part of its own object. But either alternative leads to a vicious infinite regress.

- BROWN, William Norman.** *Man In The Universe: Some Continuities In Indian Thought.* Berkeley Univ Of Calif Pr 1966.

- BROWNE, Joseph W.** *Berkeley's Intellectualism.* Jamaica NY St Johns Univ Pr 1975.

"The essential proposition of this book is this: The philosophy of George Berkeley... developed from his early sensistic nominalism towards a greater and greater appreciation of the intellectual elements of human knowledge." The views of Thomas Aquinas are employed as a norm for measuring and evaluating this Berkeleyan evolution.

- BROWNE, S S S.** How Can Ethical Principles Be Known? *Ethics* 56,186-192 Ap 46.

- BROWNE, S S S.** Independent Questions In Ethical Theories. *Phil Rev* 61,188-197 Ap 52.

This article points out that different ethical theories, which appear to conflict, actually do not do so because they answer independent questions. Besides the properly ethical question, "What ought I to do?" theories deal with the epistemological question, "How do I know my duty," the semantical question, "What does 'good' mean," and the psychological question, "What leads people to form their moral opinions?" When these often confused questions are distinguished, it will be seen that various answers to each are compatible with various answers to each of the others, and that an answer to one question cannot be deduced from an answer to another.

- BROWNE, S S S.** Paralogisms Of The Free-Will Problem. *J Phil* 39,513-519 S 42.

That moral freedom entails an absence of predetermination of the will is an illusion which "does not cease even after it has been detected and its invalidity clearly revealed" (Kant). Why? Determinism appears to imply that every event is either necessary or impossible. Necessity and impossibility are extreme degrees of probability. Probability is relative to available evidence. Relative to my present knowledge, my future choices are neither necessary nor impossible. For omniscience, all actual events are necessary, regardless of whether they are determined causally.

BROWNE, S S S. Right Acts And Moral Actions. *J Phil* 42,505-515 S 45.

While in no sense a commentary on Ross, this article defends and elaborates his statement, "A morally good action need not be the doing of a right act, and the doing of a right act need not be a morally good action." Rightness is an attribute possessed by certain acts independently of the motive for doing them. An action is moral (morally good) when the agent judges that the act is right and the action would not have occurred otherwise. Seven degrees of morality are distinguished, based on the relation between motivation and judgment of rightness.

BROWNE, Samuel S S. Does Freedom Entail Non-predetermination? *Phil Rev* 49,571-576 S 40.

The answer is negative. I am free with respect to a given act when it is the case that I shall do it if I choose to do it and shall not do it if I choose not to do it. This definition carries no implication regarding predetermination of the will. Self-determination leads to an infinite regress. Each volition would have to be controlled by a prior volition and this by another *ad infinitum*. Free action appears to involve contingency as long as the act of choice remains an omitted causal factor.

BROWNELL, Baker. *The Philosopher In Chaos: An Attempt To Make Head And Tail Of The Modern World.* NY Van Nostrand 1941.

This book presents a humanistic and naturalistic philosophy of cultural, economic, artistic and moral decentralization by means of modern 'distributive' instead of 'concentrative' technological development. The author shows how the dominant philosophical, psychological, social, economic, artistic and scientific tendencies of our age develop and affect each other.

BROWNELL, Baker. The College And The Community. *Main Currents* 9,145-146 Mr 53.

BROWNING, Douglas (ed). *Philosophers Of Process.* NY Random House 1965.

BROWNING, Douglas. Acts. *Rev Metaph* 14,3-17 S 60.

Any investigation of human freedom requires prior consideration of the nature of acts in general and acts of will in particular; the author offers preliminary observations on these topics. He first discusses whether acts are perceived, introspected, or inferred, and argues that they should be accorded existential status as occurrences. Then, distinguishing between doing and having as modes of experience, he maintains that all human beings experience acts of willing, but that judgments of volition are peculiarly subject to self-serving distortion. Finally, the author suggests that acts differ as motives differ, and outlines his view of the major types of experienced content.

BROWNING, Robert W. "Broad's Theory Of Emotion" in *The Philosophy Of C D Broad*, Paul Arthur Schilpp (ed), 613-708. NY Tudor 1959.

This lengthy article is mainly devoted to exposition of Broad's conception of emotions and to inquiry into a sequence of his distinctions made among emotions. One intriguing focus is the possibility that Broad himself came to hold a first-hand non-sensuous emotional moral sense theory of a trans-subjective dispositional sort. Earlier, Broad rejected any such theory for ethics. Later, when he asks himself "what is happening when a person is said to be feeling a first-hand moral emotion towards an act in respect of his belief that it is right or that it is wrong" he says that it seems he does not first recognize its moral quality but rather pronounces the omnibus term "right" or "wrong" after aspects of the act have been considered and a "final moral-emotional reaction" has been formed. Roughly, there is here an emotional version of Ross' deontological toti-resultant outcome. Broad does not confess adherence to the view but he does state it with sympathy and plausibility. (edited).

BROWNING, Robert W. "Reason And Types Of Intuition In Radhakrishnan's Philosophy" in *The Philosophy Of Sarvepalli Radhakrishnan*, P Schilpp (ed), 173-277. NY Tudor 1952.

Five different ranges of meanings of "intuition" with several subdivisions are distinguished. The author believes that he finds them all tacitly acknowledged by Radhakrishnan as having exemplification, although some of them, "sensory" and "rational," would not be labelled "intuition" by him. Moral values are classed as pre-spiritual, although moral prophets are intuitive men. Aesthetic values, however, are "spiritual," and—like various religious contents of experience—are used by Radhakrishnan as sufficient by themselves to ground metaphysical idealism.

BROWNING, Robert W. On Professor Lewis' Distinction Between Ethics And Valuation. *Ethics* 59,95-111 Ja 49.

Positively, Lewis' Carus Lectures constitute an advance over Deweyan pragmatic ethics in providing sharper distinctions (a) for distinguishing differing kinds of consequences of having acted to resolve a problem and (b) for the analysis of one of these kinds for its structure in relation to such confirmation as is possible. Likewise, tools are available for removal of ambiguities of the "means-end continuum." Most important is Lewis' break with Dewey in maintaining that value determinations—which are a branch of empirical knowledge—are (in Lewis' words) "not sufficient by themselves for any solution of ethical problems, in general or in particular." Therewith, distinctive questions of justice are recognized, and there is no glozing over what arrangements are just when problematic situations overlap and their respective, apparently warranted, resolutions are incompatible. After having so carefully avoided any legerdemain in making the transition from empirical judgments of valuation to the morally imperative, however, Lewis leaves one with extreme

perplexity over how he is to solve his own clarified problem. Textual evidence suggests that he wants a normative universalistic ethics.

BROWNING, Robert W. Philosophy And Education. *Educational Forum* 203-211 Ja 45.

Although the autonomy of philosophy is maintained, and although the genuine relevance of its highly general ideas to cultural formations may not be evident to the layman, the position is taken that the health of philosophy is furthered by gearing to specific ranges of perplexity in the life of man, such as the massive ones of deliberate education. The overwhelming importance of education will be felt by all reflective lovers of their species; formal education, in order to avoid domination either by institutionalized interests of segments of society or by biases of specific philosophical bent, requires developing communication between educators and varieties of philosophers.

BROWNING, Robert W. Philosophy And The Ordinary Teacher. *Educational Forum* 355-362 Mr 45.

Illustrations are given to indicate the desirability that a teacher possess the following qualities: (a) a general understanding of our social world and some acquaintance with the ideas which have directed our development amidst rival ideas, to provide background for formation of the shapes of local daily responsibility; (b) habits of critical and discerning judgment; (c) ability to handle abstractions requisite for comprehensiveness of outlook and the communication of policy, and (d) integration of mind, including both scientific and valuational aspects, needed for consistency in practice as well as serenity. And it is argued that doing the work of some courses in philosophy will facilitate the growth of a teacher in these characteristics.

BROWNING, Robert W. Weiss's Doctrine Of Concern. *Rev Metaph* 9,328-358 D 55.

Weiss offers us his *De Anima*, wherein he attempts to provide at once for general evolutionary continuities and for discontinuities, e.g., between non-living and living, between animal psyches and selves. Each being, he holds, has a concern, focusing on the future in an individualized way; animals have psyches and men have selves. Selves are not states of bodies, for then there would be no self-identity and no control of the body by the self. Selves allegedly have "concern for an all-embracing good," not confined to the human species. Weiss' reader is puzzled by problems of determining what sentences are definitional and what are offered as empirical observations. One has difficulty in determining whether concerns are relatively concrete actualities, or are abstracted aspects of observed behaviors, or are constructs of scientific or metaphysical hypothesizing. A prime intent of the article is to incite Weiss to a greater definiteness of articulation; toward that end it concludes with fifteen interrogations.

BROWNOWSKI, J. *Science And Human Values.* NY Messner 1958.

A three-part essay: In Part 1 "The Creative Mind," it is argued that discovering the hidden unity in apparent variety is the common goal of creative scientific and artistic activity. Part 2 "The Habit of Truth," deals with "the nature of the truth" in science and in social life and the influence of the search for empirical truth on conduct. Testing concepts by experience, not self-evidence and authority, lead to truth. Part 3 "The Sense of Human Dignity," culminates in an appeal, inspired by James' pragmatism, to generalize the values in science into a common human ethic of independence, originality and freedom.

BROWNSON, Orestes A. *The Brownson Reader* (ed By Alvan S Ryan). NY Kenedy 1955.

In the introduction, Brownson's religious and political views both before and after his conversion to Roman Catholicism in 1844 are considered, while in the selections, grouped under the headings "Society and Politics," "Education," "Literature and Literary Men," "Philosophy," "Religion," and "Christianity and Civilization," only about one-third are drawn from Brownson's pre-Catholic period. Each group of selections is preceded by a brief introductory statement, and each individual selection has an editorial note supplying relevant background and bibliographical information.

BRUEHL, Lawrence. *The Death Blow To Communism.* NY Vantage Pr 1958.

The author, a self-styled philosopher, claims that his philosophy of "trinism" is the "... first new departure... in over 2,000 years." The key principle is: "A thing is a position-operation-duration structure." If applied"... this philosophy will deal the

final death blow to communism" and lead to the "solution" of a number of economic and political problems.

BRUGGER, Walter. *Together.* *Phil Today* 1,22-25 Mr 57.

BRUMBAUGH, R S and Stallknecht, N P. *The Spirit Of Western Philosophy: A Historical Interpretation Including Selections From The Major European Philosophers.* NY Longmans, Green 1950.

BRUMBAUGH, Robert S (ed). *Plato On The One: The Hypotheses In The Parmenides.* New Haven Yale Univ Pr 1961.

A translation and commentary on the "hypotheses" in Plato's *Parmenides*, with a Greek text and composite record of variant readings of forty-five manuscripts. The comments are "intended to show the logical development of Plato's argument, proposition by proposition as well as in its larger units." The translation is intended "to render each step of the argument in a clear and exact English proposition, with the same logical syntax as the Greek sentence translated." The *Parmenides* is viewed as an alternative to excessive formalism and limited empiricism. It offers "a rigorous argument for the need of a philosophy that views reality neither as process in flow nor as a domain of abstract, valuationally neutral, structural form." It is thus an indirect proof "that reality is grounded in some principle of value." Historical and aesthetic aspects of the dialogue, and the bearing of the theory of forms and its problems on it, make up the first section. A third section tries to show that "the theory of forms is presupposed by common sense, and sheer existence."

BRUMBAUGH, Robert S. *Plato For The Modern Age.* NY 1962.

An elementary yet penetrating book, introductory and scholarly. It intends to introduce Plato to readers who have almost no knowledge of him or of philosophy. As such, the emphasis is not on any sort of scholarship, but upon summarizing its results. History, biography, summaries of the dialogues, and exposition of doctrine are mixed together and interspersed with appraisals and approvals, to give a readable and informative introduction to Plato. The main emphasis is on the philosophic insight which might deserve to be called Platonism, and hence upon the theory of forms. There is a section on the achievements and the needs of Platonism today.

BRUMBAUGH, Robert S. *Plato's Mathematical Imagination: The Mathematical Passages In The Dialogues And Their Interpretation.* Bloomington Indiana Univ Pr 1954.

BRUMBAUGH, Robert S. *The Philosophers Of Greece.* NY Crowell 1964.

An elementary and yet accurate history of philosophy from Thales to Aristotle (not beyond). It presupposes nothing, and so is directed to the beginner; yet the expert will find some (few) new insights suggested and (to some extent) documented in the notes. The emphasis is on ideas that have been generative of the nature of philosophy and of the premises and problems of our present culture. Because it is directed to beginners, many controversial points are simply stated dogmatically, including most of the human-interest stories about the philosophers. Readers already familiar with the subject will find the greatest interest in a series of applications and explanations of Plato's divided line. There are good notes, and yet not all difficult points are noted, and there is a bibliography of further basic readings mixed with quite esoteric sources and some works referred to only incidentally; the notes contain many references to the bibliography which are not satisfied there.

BRUMBAUGH, Robert S. An Aristotelian Defense Of "Non-Aristotelian" Logics. *J Phil* 48,582-585 S 51.

BRUMBAUGH, Robert S and Lawrence Jr, Nathaniel M. Aristotle's Philosophy Of Education. *Educ Theor* 9,1-15 Ja 59.

BRUMBAUGH, Robert S and Lawrence, Nathaniel M. *Philosophers On Education: Six Essays On The Foundations Of Western Thought.* Boston Houghton Mifflin 1963. In 1959, Brumbaugh published an article on "Aristotle's Philosophy of Education as Social Process" to John Dewey and the *Experimental Spirit in Philosophy*, C W Hendel, Editor. The first was revised, and the second was followed by a sequel. The collaboration is a credit to both authors, the first, an authority on Plato, the second, on Whitehead, and there are chapters of professional competence on these thinkers. To throw some bridge between the ancients, Plato and Aristotle, and the 20th century philosophers, Dewey and Whitehead, the authors supply essays on two thinkers of the Age of Reason, Rousseau and Kant.

BRUMBAUGH, Robert S and Stallknecht, Newton P. *The Compass Of Philosophy: An Essay In Intellectual Orientation.* NY Longmans Green 1954.

BRUMBAUGH, Robert S. Applied Metaphysics: Truth And Passing Time. *Rev Metaph* 19,647-666 Je 66.

The author argues that, while philosophical principles do not lead deductively to specific practical actions, they may lead to the discovery of new limits and directions. To illustrate his notion of "applied metaphysics," he focuses on the differences between public and subjectively experienced time and the twentieth-century insight that time is a passage between modally distinct past and future. That there are no past possibilities and no future facts is, he contends, a principle with important consequences for religious ethics, modal logic, adolescent psychology, and education. There is appended a technical note on the logic of temporal modalities.

BRUMBAUGH, Robert S. Aristotle's Outline Of The Problems Of First Philosophy. *Rev Metaph* 7,511-521 Mr 54.

BRUMBAUGH, Robert Sherrick and Lawrence, N M. *Philosophical Themes In Modern Education.* Boston Houghton Mifflin 1973.

BRUMBAUGH, Robert S. Logic And Time. *Rev Metaph* 18,647-656 Je 65.

Citing the ethical and legal problem of freedom versus determinism as a case in point, the author argues that different implicit kinds of time-reference are involved in different fields of application and that when metaphysical questions are asked a logic

with tenses becomes necessary. In response to this need, he presents a class calculus taking degrees of definiteness or determinacy into account. Since definiteness is a property of the past, this calculus can be interpreted as a logic of temporal aspects.

BRUNER, Jerome S And Others. *Contemporary Approaches To Cognition, A Symposium Held At The University Of Colorado.* Cambridge Harvard Univ Pr 1957. Six leading American psychologists discuss the present status of the psychology of knowing. Psychology deals with the organism and its environment, and the "transactions" (Dewey) between them. The old prescientific common-sense psychology put cognition at the center—how do we know? The new behaviorism has neglected the question. There are now many working at cognition however, because of information theory, and the new interest in symbols, or in codes, "decoding and encoding."

BRUNER, Jerome S. *On Knowing: Essays For The Left Hand.* Cambridge Harvard Univ Pr 1962.

This book divides into three parts; the first is concerned with how we construct reality through the knowing process, how this process gives form to language, science, literature, and art. It discusses the conditions of creativity, myth and identity, identity and the modern novel, and art as a mode of knowing. The second part is concerned with how we impart knowledge and thus conjectures on the nature of teaching and learning; it discusses such topics as the act of discovery, learning mathematics, and current philosophies of education. The third part examines how one's conception of reality, influenced by the knowing process and its uncertainties, affects action and commitment.

- BRUSH, Stephen G.** Interatomic Forces And Gas Theory From Newton To Lennard-Jones. *Arch Rat Mech Anal* 39,1-29 1970.
- A recurrent theme in the physical science of the past three centuries has been provided by the program attributed to Isaac Newton: from the phenomena of nature to find the forces between particles of matter, and from these forces to explain and predict other phenomena. The history of this program, through the most recent attempts to employ a force law introduced in the 1930's by J E Lennard-Jones, suggests that the hypothetico-deductive model of scientific method has not been followed in practice, and that there is serious doubt as to whether it is worthwhile trying to establish a single force law for the interaction between two atoms or molecules.
- BRUSH, Stephen G.** Should The History Of Science Be Rated X? *Science* 183,1164-1172 22 Mr 74.
- The traditional use of the history of science to teach "scientific method" has been undermined by recent writings of historians of science questioning the objectivity of scientists in choosing theories. Thus it might be argued that the way scientists behave is not a good model for students to follow. Some additional historical examples are presented: the rejection of the caloric theory of heat, Maxwell's view on kinetic theory, and the interatomic force law. It is concluded that presentation of a more realistic picture of the behavior of scientists may have a redeeming social value by liberating us from past misconceptions about science.

- BUCHANAN, James M.** Ethical Rules, Expected Values, And Large Numbers. *Ethics* 76,1-13 O 65.
- The size of the group an individual interacts with is a determinant of his choice of ethical rules. The crucial factor is whether an individual trying to choose between acting always on a moral law or acting always on the basis of expediency will calculate the utility of the consequences of his choice assuming that his choice will or will not affect others' choices. His decision in this regard will depend upon how many others there are. The moral law will tend to get accepted in smaller groups and the maxim of expediency in larger ones.

- BUCHLER, Justus.** *Metaphysics Of Natural Complexes.* NY Columbia Univ Pr 1966.
- According to the "principle of ontological parity" the author employs, the "real" applies equally to all entities, natural complexes and their traits. All things as natural complexes are composed of traits and these in turn are complexes of other traits. Thus there is no absolute simplicity. All complexes have ordinal location, integrity, contour and scope. The basic features of complexes are best understood as prevalence and ascendance, which are not to be equated with such categories of being as determinateness and permanence of their opposites. The advantage of the idea of complexity is that it is manipulable in an indefinite number of orders; it is analyzable and interpretable without end. Basically, the author uses the notion of natural complexes to broaden the conception of metaphysics as "inquiry into the generic traits of existence," on the ground that "existence" is not generic enough. One of the main tasks of this work is to test the generality of concepts for a more adequate theory of the real.
- BUCHLER, Justus.** *Nature And Judgment.* NY Columbia Univ Pr 1955.
- In this book the author has elaborated some of the central ideas expressed earlier in his *Toward A General Theory Of Human Judgment*, and has extended the systematic framework there initiated. He reaffirms his belief that the concept of judgment should be generalized to include the active and exhibitiv modes as well as the currently more prized assertive mode, and that the ambiguous concept of experience should be replaced by the more general term "proception." In addition, he discusses "query," the methodical ramification of judgments, a process which again should be viewed in three modes. Meaning also should not be equated with a single manifestation of it to the exclusion of other equally important manifestations. The conditions for something to be meaningful is discussed in some detail in terms of precepts, perspectives, and judgments that "articulate" perspectives.
- BUCHLER, Justus.** *The Concept Of Method.* NY Columbia Univ Pr 1961.
- The author states: "The present study asks what makes... methods 'methodic': it tries to determine universal and essential traits, and the nature of methodic activity as such." After a preliminary discussion of the conceptions of method developed by Bentham, Coleridge, and Descartes the author formulates his own view, beginning with the general orientation that "method arises when man comes to recognize himself as manipulative," and raising then the questions of the relation between method and goals and method and knowledge. His conclusion is that: "A method is a power of manipulating natural complexes, purposively and recognizably, within a reproducible order of utterance; and methodic activity is the translation of such power into the pursuit of an end—an end implied by the reproduction." The book concludes with a critical examination of Dewey's view ("the identification of method with problem-solving is in itself unsatisfactory.") and Whitehead's view ("philosophy cannot be interpreted solely in terms of the speculative reason as Whitehead understands it.")

- A highly technical and scholarly treatment of the concept of "motion" in Aristotle, Cicero, Newton, and Hegel. The author proposes to examine each of these thinker's methods as an exercise in philosophic "semantics." His thesis is that a pluralistic examination of four different and archetypal treatments of "... the theme that God can be demonstrated from motion..." will serve as a preliminary to philosophic "inquiry," i.e., into the idea itself rather than the discussion of the idea by one or another thinker. Knowledge of the history of ideas and critical metaphysics is presupposed. The book is footnoted and the footnotes taken together provide a useful bibliography.

- BUNGE, Mario (ed).** *Problems In The Foundations Of Physics*. NY Springer 1971.
- BUNGE, Mario (ed).** *Quantum Theory And Reality*. NY Springer 1967.
- In his preface, entitled "The Turn of the Tide," M Bunge argues that realism is coming back to physics; that the phenomenalist period is drawing to an end. The first paper, and the longest of them, is Sir Karl Popper's "Quantum Mechanics without The Observer," followed by H Mehlberg's "The Problem of Physical Reality in Contemporary Physics." The remaining papers are P G Bergmann's "The Quantum State Vector and Physical Reality," H Margenau and L Cohen's "Probabilities in Quantum Mechanics," J-P Vigié's "Hidden Parameters Associated with Possible Internal Motions of Elementary Particles," G Ludwig's "An Axiomatic Foundation of Quantum Mechanics on a Nonsubjective Basis," and M Bunge's "A Ghost-free Axiomatization of Quantum Mechanics." Formerly, the discussions about whether the quantum theory concerns real objects or real experiences have been comparatively free-ranging. This seems to be the first technical treatment of the subject.
- BUNGE, Mario (ed).** *The Critical Approach To Science And Philosophy*. NY Free Pr Of Glencoe 1964.
- The essays reflect a recognition of Popper's influence, and especially his critical approach to knowledge: in philosophy, logic and mathematics, science, society and history. Bunge pays tribute to Popper's critical rationalism, empiricism and realism.
- BUNGE, Mario.** *Causality: A Rejoinder To Professor Schlegel's And Morgenbesser's Reviews*. *Phil Sci* 29,306-317 Jl 62.
- BUNGE, Mario.** *Causality: The Place Of The Causal Principle In Modern Science*. Cambridge Harvard Univ Pr 1959.
- This comprehensive treatment of causality consists of thirteen chapters arranged in four parts. Part I is devoted to clarifying the concept of causality. Typical definitions, including those of Aristotle, Galileo, and Hume are critically examined. Hume's constant-conjunction formula is said to have shortcomings remedied by introducing the concept of uniqueness and, in particular, the notion of production. This leads to a refinement of the maxim "Same causes same effects." Part II, What Causal Determinism Does Not Assert, gives a detailed list of what causality is not. The view of causality defended here is one that allows chance to operate as an ontological category. Part III, What Causal Determinism Does Assert, presents arguments for such conclusions as that simple causation is implied by usual formulations of the causal principle and that linear causal chains are a rough model of real becoming. Part IV, The Function of the Causal Principle in Science, argues that causation has a limited range of application. Science now employs a broader principle.
- BUNGE, Mario.** *Foundations Of Physics*. NY Springer 1967.
- This book is devoted to the axiomatic foundation and philosophical analysis of the main current physical theories: classical mechanics, electromagnetic theory, relativity, and quantum mechanics.
- BUNGE, Mario.** *Intuition And Science*. Englewood Cliffs NJ Prentice-Hall 1962.
- Philosophers have sometimes resorted to intuition in order to justify their views. Mario Bunge attacks all such justificatory procedures. He criticizes Dilthey's "verstehen," Bergson's "metaphysical intuition," and Husserl's "Wesensschau." These neo-Romantic philosophies, as Bunge labels them, "have not enabled us to attain a deeper understanding of history, or of life, or of a single essential property or essential law of any class of objects." However, Bunge's objections are generally the standard ones directed against any employment of a psychological criterion for validation. He does little to examine some of the logical dilemmas that have made intuitionism an attractive alternative to formalism and other rationalistic systems. Thus no analysis is attempted of what accounts for the necessity in those analytic sentences which are not strict substitution instances of tautological formulae. And even though he argues against Brouwer's mathematical intuitionism he does not argue against the more crucial intuitionism used to defend the ontological commitment to classes.
- BUNGE, Mario.** *Metascientific Queries*. Springfield IL Thomas 1959.
- Bunge's approach to some interesting problems in the philosophy of science (emergence, interpretation of quantum physics, the analogy between feed-back systems and human thought) is vigorous and fresh.

- BUNGE, Mario.** *Philosophy Of Physics*. Boston Reidel 1973.

BUNGE, Mario. *Scientific Research: Part I—The Search For System; Part II—The Search For Truth.* NY Springer 1967.

This is a treatise on the philosophy and methodology of science. The author addresses himself both to philosophers interested in the ways of science and to scientists interested in the philosophical presuppositions and implications of their own work. There are more than a thousand problems, and extensive bibliographies. The author's philosophy is suggested by the organization of this work. In fact, after the first three preliminary chapters, the book follows what the author takes to be the line of real research as opposed to the usual philosophical descriptions of it. One trait of this work is its frequent appeal to examples drawn from many fields of research, from physics to social science, both past and contemporary. Another characteristic is its radical departure from the accepted positivist picture of science. This seems to be the first systematic treatise in the field and it challenges many accepted views.

BUNGE, Mario. *Semantics.* Boston Reidel 1974.

BUNGE, Mario. *The Myth Of Simplicity, Problems Of Scientific Philosophy.* Englewood Cliffs NJ Prentice-Hall 1963.

This "problem book" aims to elucidate some key concepts of philosophy and science, such as those of conceptual analysis, analyticity, truth, law, level, and simplicity, and to show that these concepts are rich and complex, thereby exploding the myth that simplicity is either a fact or a desideratum of research. Part I, Analysis, deals with kinds of analyticity, and distinguishes nine meanings of the word 'level'. Part II, Simplicity and Truth, examines logical simplicity, semantical and epistemological simplicity, several kinds of pragmatic simplicity, and simplicity in theory construction. Part III, Scientific Law, takes up induction in science, various criteria of scientific law, causality and chance, and certain metalaws.

BUNGE, Mario. On Null Individuals. *J Phil* 63,776–777 D 66.

Reasons are given for keeping and even multiplying Martin's null individual. Many scientific theories are many-sorted, in the sense that they concern n -tuples of individuals, one of which is occasionally absent. Several examples are shown, which suggest that for the sake of the uniformity of treatment as many null individuals as reference sets are needed. Also, a new characterization of the concept of null individual is offered: The null individual of a given kind is that object which, physically added to an arbitrary individual of the same kind, yields the latter. The concept is used in the author's version of mereology.

BUNGE, Mario. The Complexity Of Simplicity. *J Phil* 59,113–134 Mr 62.

This paper attempts to show that simplicity is a complex concept. Various kinds of simplicity are first distinguished, then some attempts to gauge degree of complexity are examined, and finally the reasons for seeking certain kinds of simplicity while avoiding others are investigated. It is argued that not all kinds of simplicity are desirable or even compatible with one another. Briefly and rather inaccurately, two kinds of objects can be simple: things and signs. Before analyzing ontological simplicity the paper examines the simplicity of signs, a semiotic problem that has only recently been faced in a scientific spirit.

BUNZEL, John H. The Commitment To Power Of Robert S Lynd. *Ethics* 71,90–103 Ja 61.

BURANELLI, Vincent. *Josiah Royce.* NY Twayne 1964.

This volume leads the reader into metaphysics through literature. Compared with French and Spanish philosophy, there has been a widening gap between the American literary thinker and the professional philosopher. But Royce was as deeply interested in poetry as in mathematical logic; in history, furthermore, he produced one admirable volume, *California*. Royce's problem in the history of his native state is to determine how social order can be created out of anarchy. He is proud of California's achievement but a harsh critic of the American ethos. He rebukes self-righteousness and utter blindness to the rights of nonEnglish speaking inhabitants. The author sketches Royce's metaphysics in its connections with logic, particularly the theory of order, the Fichtean and Jamesian theory of act and will, and the Christian doctrine of a redemptive community atoning for the sin of all. The volume has a useful bibliography and a thorough index.

BURCH, G B. *Early Mediaeval Philosophy.* NY King's Crown Pr 1951.

The author asserts that the early Middle Ages, a sort of neo-pre-Socratic period, displayed a spontaneity and diversity of thought which continued until the thirteenth-century revival of Aristotle gave scholars an accepted canon of philosophical terminology. The book at hand describes the doctrines of five

outstanding philosophers of that period: John Scotus Erigena, Anselm of Canterbury, Peter Abelard, Bernard of Clairvaux, and Isaac of Stella.

BURCH, George Bosworth. Anaximander, The First Metaphysician. *Rev Metaph* 3,137–160 D 49.

BURCH, George Bosworth. Principles And Problems Of Monistic Vedānta. *Phil East West* 11,231–238 Ja 62.

BURCH, George Bosworth. The Hindu Concept Of Existence. *Monist* 50,44–54 Ja 66. The Hindu epistemological approach to philosophy seeks existence within the realm of experience. Dreams and other illusions make certainty impossible concerning the existence of things we experience. But in the experience of awakening we have intuitive certainty that the now sublated dream objects do not and never did exist. Certainty is possible only concerning the past and only of nonexistence. Existence is not given in experience; nonexistence is the positive concept. The continued nonexistence of sublated objects is a problem unsolved because of its never arising. Distinction of successive stages of nonexistence by successive sublations generates a metaphysical theory. Only the subject is never sublated and so exists absolutely.

BURCH, George Bosworth. The Nature Of Life. *Rev Metaph* 5,1–10 S 51.

BURCH, George Bosworth. The Philosophy Of P D Ouspensky. *Rev Metaph* 5,247–268 D 51.

BURCH, George Bosworth. The Place Of Revelation In Philosophical Thought. *Rev Metaph* 15,396–408 Mr 62.

In order to clarify the proper place of revelation in Western philosophical thought, the author first considers the problem as it appears in the conflict between Vedānta and Buddhism. He then discusses the positions of Plato, Aristotle, Descartes, Hume, and Kant. Finally, after commenting on the psychology of revelation, the author argues that reason, experience, and revelation are coordinate sources of ordinary knowledge. He concludes that revelation provides not only religious truth but all that metaphysical truth which is the heart of the Western cultural tradition.

BURCH, George B. Seven-Valued Logic In Jain Philosophy. *Int Phil Quart* 4,68–93 F 64.

BURCH, George B. The Neo-Vedānta Of K C Bhattacharya. *Int Phil Quart* 5,304–310 My 65.

Vedānta philosophy is rational analysis of experience in terms of reality and appearance. The mark of illusion is that it can be sublated as a dream when we wake up. According to non-dualist Vedānta the whole world can be sublated. What cannot be sublated is the self. K C Bhattacharya follows the Vedānta practice of constructing a series of steps from object to subject with a new subtlety of discrimination which justifies the designation "neo-Vedānta." Freedom is attained, or rather recognized as eternally possessed, by progressive development of the subjective attitude from perception of environment to perception of the body, inner feeling of the body, knowledge of absence by conscious non-perception, image, idea, thought, feeling, introspection, non-individual self, and finally, freedom itself.

BURGERS, J M. *Experience And Conceptual Activity: A Philosophical Essay Based Upon The Writings Of A N Whitehead.* Cambridge MA MIT Pr 1965.

This book is an essay in speculative metaphysics, not a discussion of the logic of conceptual thinking as the title might suggest to some. The author is the first physical scientist to make a comprehensive effort to find exemplifications for Whitehead's metaphysical principles in contemporary science. His primary concern is to establish valuation as an essential aspect of all processes, whether they be human or electro-magnetic. He finds the Whiteheadian concept of order verified in recent studies of crystallization.

BURHENN, Herbert. Historical Evidence And The Explanation Of Actions. *Southern Humanities Review* 10,65–73 Wint 76.

This essay argues that the form which explanations of actions take in historical writing is influenced by the kinds of evidence which the historian has available. Three cases are distinguished: (1) the historian has first-person evidence about the agent's plans or reasoning pertaining to the action and adduces this reasoning to explain the action; (2) the historian has no first-person evidence but is able to construct a rationale for the action; (3) the historian has evidence from which he can conclude that the agent possessed certain character traits to which he can appeal in constructing an explanation.

- BURHENN, Herbert.** Religious Beliefs As Pictures. *J Amer Acad Relig* 42,326-335 Je 74.
This essay examines the analogy between religious beliefs and pictures as developed by Wittgenstein and D Z Phillips. This analogy is used by them to bring out four features of religious belief: (1) the intimate relation between a religious belief and the style of a person's life; (2) the distinction between religious beliefs and empirical claims; (3) the inapplicability of our usual criteria of contradiction to some religious beliefs; (4) the irreplaceability of religious beliefs by value-judgments or expressions of attitudes. It is argued that the most problematic feature of the analogy is the ignoring of the propositional explication of religious beliefs.

- BURKE, Kenneth.** *A Grammar Of Motives*. NY Prentice-Hall 1945.
This work is a condensation and abridgement and the forerunner of two additional volumes in the semantic field of dramatics or action with the five basic terms of dramatism as the key for the analysis: act, scene, agent, agency and purpose or what, where, who, how and why. This work is not without its dance of dialectics as the clue to a resolution of all evils, particularly that of war, in the underlying aim of *ad bellum purificandum*.
- BURKE, Kenneth.** *A Rhetoric Of Motives*. NY Prentice-Hall 1950.
The volume considers some of the classic analyses of the subject of rhetoric and some of the contemporary considerations of such topics as propaganda, advertising, wishful thinking and the like. In advancing his own theories, Burke considers in broad outline the range of rhetoric, its basic and its realistic function.
- BURKE, Kenneth.** *Language As Symbolic Action; Essays On Life, Literature And Method*. Berkeley Univ Of Calif Pr 1966.
The author's purpose in this book is to articulate a particular theory of language and to illustrate its usefulness as a tool of literary criticism. The latter task is carried out in a series of eleven essays dealing either with particular works, e.g., *Faust*, or with individual authors, e.g., Theodore Roethke. The former task ranges from another attempt to define the nature of man to speculations about the origin of language, and it includes a short critical essay on the recent work of McLuhan.
- BURKE, Kenneth.** *Perspectives By Incongruity And Terms For Order* (edited by Stanley Edgar Hyman And Barbara Karmiller). Bloomington Indiana Univ Pr 1964.
A representative sampling of Burke's writing designed to introduce his criticism to a wider circle of readers. Burke has great respect for the power of the *term* to resolve critical dilemmas, and he compiles lists of key terms which he uses in a special sense, such as piety, strategies, eloquence, to accommodate his own critical needs. Sometimes Burke's style tends to be dazzlingly obscure. However, Burke is neither an ordinary nor a conventional critic. His philosophical, sociological, historical, anthropological, psychological, and creative interests serve to enrich and broaden the scope of his literary inquiry.
- BURKE, Kenneth.** *The Philosophy Of Literary Form: Studies In Symbolic Action*. University 1941.
The central theme of this collection of essays on such miscellaneous subjects as "The Rhetoric of Hitler's 'Battle'" and "On Musicality in Verse" is that literature is a form of symbolic action. Literary criticism as understood by Mr Burke is an attempt not merely to analyze the literary surface but to penetrate its psychological depths and elucidate its social and other meanings.
- BURKE, Kenneth.** Terministic Screens. *Proc Cath Phil Ass* 39,87-102 1965.
- BURKE, Marjorie L.** *Origin Of History As Metaphysic*. NY Philosophical Lib 1950.
The author begins the concluding chapter of this book with the statement, "The class-bias resulting from the communal attempt to attain freedom tends towards the depersonalization of knowledge, and towards the debasement of philosophy to generalized systems of verbal techniques." History is discussed as a particular bias of thought whose premises have come to be taken for granted because of the pressure of cultural sanctions.
- BURKE, Peter.** A Survey Of The Popularity Of Ancient Historians, 1450-1700. *Hist Theor* 5,135-152 1966.
- BURKE, Richard.** G H Mead And The Problem Of Metaphysics. *Phil Phenomenol Res* 23,81-88 S 62.
This article is a summary of the "empiricist metaphysics" of George Herbert Mead. Against the common interpretation (of M Natanson, A E Murphy, P Pfuetze and others) that Mead began as a tough-minded social psychologist and ended as a metaphysician like Whitehead and Bergson, I argue that (1) he held a consistently positivist or anti-metaphysical position throughout his life; and (2) his attempt to incorporate "subjective" and "phenomenological" data into the method of science deserves serious consideration.

- BURKILL, T Alec.** *God And Reality In Modern Thought*. Englewood Cliffs NJ Prentice-Hall 1963.
The author begins with Kant's system, which he argues is a metaphysical interpretation of classical physics. As a result of the Kantian synthesis, all theoretical knowledge is limited to the phenomenal sphere of space and time. Burkhill demonstrates that the post-Kantian period dealt with philosophical problems within the context of Kant's epistemological dualism. As a result the only philosophical option was to be "phenomenally contented" or "phenomenally discontented." The author attempts his own philosophical analysis by emancipating thought from the Kantian dualism. He does so by broadening the traditional "rational" attitude toward life. Philosophy becomes, therefore, not a normative or hortatory discipline, but a descriptive one.
- BURKLE, Howard R.** *The Non-Existence Of God: Antitheism From Hegel To Duméry*. NY Herder & Herder 1969.
Antitheism rejects God as an independent existence, affirming man as creator. Likewise death of God theologians have "a suspicion against existence as a metaphysical category." Existents are actual, directly encounterable, independent, and ultrarational; to search for God in experience is to search for the highest conceivable existent or value. Experience of God is of "an utterly unique object" that is "beyond the world." Hegel misconceived the existent God as obstructing man's fulfillment; Sartre apotheosized existence yet futilely strained to get beyond it; Duméry rejected existence. Following Whitehead and Hartshorne, the answer to these Antitheists is that God is a persuasive activity, a final end of creation transcending creation, an eternal creative purpose permitting the creature's freedom and aiming at the enrichment of value.
- BURKLE, Howard R.** Jean-Paul Sartre: Social Freedom In *Critique De La Raison Dialectique*. *Rev Metaph* 19,742-757 Je 66.
After reviewing Laing and Cooper, Desan, Odajnyk, and Mary Warnock on the question of Sartre's supposed attempt to reconcile existentialism and Marxism, the author examines Sartre's later concept of social freedom. He argues that the individual's autonomy of choice is the irreducible core of human freedom and that Sartre's concept of the group in fusion offers a suggestive lead for understanding the ontological ground of a free society.
- BURKLE, Howard R.** Schaff And Sartre On The Grounds Of Individual Freedom. *Int Phil Quart* 5,647-665 D 65.
Sartre considers Marxism the only present living philosophy but accuses it of neglecting individuality and freedom. Adam Schaff admits the charge but rejects what he thinks is Sartre's pessimistic, a-social individualism. Schaff's own "scientific" concept is inadequate. Society predominates. Individuals woefully follow social determinations, deviating only statistically. Exactly here Sartre makes an important contribution. Not his existentialism but his analysis of consciousness in *Being and Nothingness* conceives man, dialectically, as individual and social, originating and responding, spontaneous and bound. This analysis, plausible in some ways and implausible in others, is a suggestive and serious attempt to solve the ontological issues confronting anyone who does more than simply declare man free. Sartre prefers the individual but does not remain bound by it. The dynamics of "desire" which constitute the free individual's relation to his physical environment may be recreated in society, thus transmuting the empty freedom of the lonely existentialist hero into the creative freedom of an open society.

BURR, Harold Saxton. *The Nature Of Man And The Meaning Of Existence.* Springfield IL Thomas 1962.

BURRELL, David B. *Exercises In Religious Understanding.* Notre Dame Univ Notre Dame Pr 1975.

The author has written a work of metaphysics, or hermeneutics, or philosophical theology. What Burrell is doing is to analyze a series of so-called "religious" thinkers by using the philosophical methodologies and skills pertinent to each thinker. What happens then is a precise and summary statement of each thinker's understanding of "matters religious in his age." Burrell deals intelligently with Saint Augustine, Saint Anselm, Saint Thomas, Kierkegaard and Jung, in 3 chapters. The conclusion is to demonstrate the internal coherence of each thinker's understanding of the Christian faith, and as well, the rational intelligibility of the Christian faith when appropriated by everyone.

BURRELL, David B. C S Peirce: Pragmatism As A Theory Of Judgment. *Int Phil Quart* 5,521-540 D 65.

Although Peirce's pragmatism was often presented and is often taken as a theory of meaning, it is manifestly incomplete until one explains how the continuous, ongoing process of signifying culminates in a judgment. This Peirce never quite managed to show, though he recognized "assertion as an act of a totally different nature from apprehending the meaning of a proposition." He does invoke, however, three successive analogies for judgment: action, volition, and purpose. Each proves inadequate under piercing auto-criticism, and the last one employed, *purpose*, shades off into an "intellectual sympathy." This suggestion, vague but fruitful, points to a more satisfactory interpretation of the category of "firstness" and allows a comparison with B J Lonergan's theory of judgment.

BURRELL, David B. John Duns Scotus: The Univocity Of Analogous Terms. *Monist* 49,639-658 O 65.

Scotus is pushed to his doctrine of univocity by certain models of concept-formation and inquiry. After scrutinizing Scotus' reasoning vis-a-vis his questionable assimilation of Aristotle, Aquinas and Henry of Ghent, the article concludes: the very directness of access to God granted by a univocal concept of being betrays a failure to appreciate how problematic our conceptual access to mystery must be, and the most telling weaknesses in Scotus' account of philosophical knowledge.

BURRELL, David B. Kant And Philosophical Knowledge. *New Scholas* 38,189-213 Ap 64.

BURRELL, David. *Analogy And Philosophical Language.* New Haven Yale Univ Pr 1973.

With questions inspired by Heidegger and, even more, by Wittgenstein, the book approaches aspects of Plato, Aristotle, Aquinas and Scotus, emphasizing their philosophizing as activity rather than doctrine. In examining how these philosophers pose their questions and consider answers to them, Burrell centers on the role of analogous expressions, how they are used and what, resorting to contemporary techniques of analysis and logic, may be inferred concerning rules and criteria for their application. While he concludes that such criteria do not seem susceptible to algorithmic formulation because analogous terms retain an irreducibly systematic ambiguity, Burrell displays the philosophical activity by which sensitivity is increased for the recognition and clarification of analogical usages.

BURTON, David H. Theodore Roosevelt's Social Darwinism And Views On Imperialism. *J Hist Ideas* 26,103-118 Ja-Mr 65.

An analysis of Theodore Roosevelt's views on social Darwinism, this article shows the conflict in Roosevelt's thought between applying Darwinism to some kind of evolutionary principle for all people, and accepting the imperialist thesis that some races are more fit to rule than others. The author believes that Roosevelt was strongly influenced by Darwin, though this was somewhat tempered by Roosevelt's concern with character, which along with such attributes as love, courage and duty, can be passed along through a society because of the efforts of individuals and institutions. The author concludes that Roosevelt's Darwinism ultimately does not determine his imperialism, which is instead based on what Roosevelt saw as the benefit for mankind.

BURTT, Edwin Arthur. *In Search Of Philosophic Understanding.* NY 1965.

Burt argues that much can be gained by investigating the emotional motivations behind the basic presuppositions of competing philosophies. By discussing, in turn, ordinary language philosophy, existentialism, and Marxism he demonstrates how these presuppositions and motives can be made explicit. And one must, he says, make one's own motives and presupposition clear as well as those of others. Only if such motivation is made conscious, can we improve our presuppositions and avoid having our motives conflict with our concern for truth. Burt welcomes "continuing revolution in our philosophical presuppositions as a natural and normal process, to be fostered under conscious guidance." He discusses in some detail the different motives and presuppositions in the history of science and suggests the direction in which future change in science may lie. He also discusses truth, objectivity and the understanding of persons and suggests that what is needed is universal sensitivity to motives and presuppositions in both Western and Eastern thought.

BURTT, Edwin Arthur. *Types Of Religious Philosophy, Revised Edition.* NY Harper 1951.

- BURT, Edwin A.** The Core Of Dewey's Way Of Thinking. *J Phil* 57,401-419 Je 60.
The author sees Dewey as essentially a philosopher-moralist and takes the central principle of his philosophy to be that of responsibility. Dewey, the author claims, more than any other philosopher, conceived the essential foundations and formulated the rationale for the open society. Although Dewey's philosophy needs revision, the author finds in it a source of wise understanding.

- BURUS, Hobert W.** A Response To Kenneth D Benne's "The Philosopher And The Scientific Researcher In The Study Of Education". *Proc Phil Educ* 19,70-74 Ap 63.
- BURWICK, Fred** And Rathbun, John W. Paul Tillich And The Philosophy Of Schelling. *Int Phil Quart* 4,373-393 S 64.
Beginning with Tillich's early analyses of Schelling's religious-historical constructions and the roles of mysticism and symbolism in Schelling's philosophy, the authors feel that a "persistent parallel" to Schelling's philosophy "is apparent throughout Tillich's philosophical-theological development." In their judgment, Schelling's transcendental idealism provides a fundamentally accurate perspective for viewing "the general structure and intent of Tillich's theology." The 1956 Munich edition of Schelling's *Werke* and Tillich's *Systematic Theology* serve as the primary sources. After an initial discussion of how the "ecstatic reason" intuitively and symbolically presents the Absolute, the authors pursue cognate existential questions of man's freedom, estrangement, and non-being, ending with an analysis of how the two men use a dialectical method of correspondence to move from the mechanism of existence to historical vitalism based on the twin themes of redemption and grace.
- BUSCH, Thomas W.** Being And Nothingness: Ontology Versus Phenomenology Of The Body. *S J Phil* 3,178-183 Wint 65.
I attempt to establish two points: first, that Sartre's ontology (as presented in the Introduction to *Being and Nothingness*) must be understood within the framework of the modified *cogito* he first presented in *The Transcendence of the Ego*, and second, that Sartre's phenomenological analysis of the body in the section "Being-for-Others" in *Being and Nothingness* is seen to be inconsistent with his view of being-for-itself as "pure appearance...total emptiness (since the world is outside of it)."

- BUSHMAN, Rita Marie.** St Augustine's Metaphysics And Stoic Doctrine. *New Scholas* 26,283-304 Jl 52.
- BUSWELL JAMES O.** A Christian View Of Being And Knowing: An Introduction To Philosophy. Grand Rapids MI Zondervan 1960.
Three orders of Christian pre-suppositions govern the scope of this introductory text. (1) Metaphysical: there exists a supreme, personal and intelligent Creator. (2) Epistemological: man in some measure is capable of intelligent apprehension of truth: *The Bible* is the infallible word of God. (3) Ethical: the universal moral evil evident in the world has a primitive cause, which has put mankind out of a correct relationship with God. There is an opening section dealing with the nature of philosophy and of philosophical "categories." After discussing "materialism" and "idealism" in the chapter devoted to ontology (*Being*), a position termed "dualistic realism" (there are mental events and material events in "integrated interaction") is affirmed. The chapters introducing the student to epistemology (*Knowing*) seek to relate faith, reason, and being. There is a short section of "suggested assignment," a bibliography, and an index.
- BUSWELL, James Oliver.** The Philosophies Of F R Tennant And John Dewey. NY Philosophical Lib 1960.
The author seeks "to sketch against the background of Tennant's and Dewey's philosophies an integrated system of theistic metaphysics and epistemology." He points out the strong antithesis between Tennant's personalistic psychology and Dewey's anti-mentalistic psychology; between Tennant's dualistic epistemology and Dewey's anti-dualistic theory of knowledge; between Tennant's recognition of existing objective entities in a world of reality and Dewey's substitution of "data" for "objects" in metaphysics. In what is essentially a comparative study in empiricism, Buswell subjects Tennant's realism and Dewey's *a priori* negations to a searching critical analysis, and therefrom opens an avenue to a realistic, integrated theistic philosophy.
- BUTCHVAROV, Panayot Krustev.** The Concept Of Knowledge. Evanston IL 1970.
The book has as its subject matter the conceptual foundations of epistemology. Its central task is the account of the concept of knowledge, but in the course of the inquiry detailed accounts are also offered of the concepts of necessary truth and sense perception. Much of the discussion is concerned with the notions of evidence, justification, and criterion.
- BUTCHVAROV, Panayot.** Concrete Entities And Concrete Relations. *Rev Metaph* 10,412-422 Mr 57.
- BUTCHVAROV, Panayot.** The Concept Of Possibility. *Phil Phenomenol Res* 20,318-337 Mr 60.
Three general theories are distinguished: (1) a possible thing is only in and for thought; (2) what is possible is merely what is not self-contradictory; (3) possibles are actual in themselves but they are not in the world. Neither of these theories seem to be wholly satisfactory to the author. A substitute theory is given, where possibility is defined as "being-thought-about." However, this appears to conflict with the ordinary meaning of the term, in reference to actuality. It is then argued that the traditional meaning of possibility in terms of actuality is itself contradictory. So, the new theory stands, provides satisfactory criteria of the possible, solves certain puzzles, and improves on the traditional meaning of the term.
- BUTLER, Broadus N** And Kolaja, Jiri. Dimensions Of Identification. *Personalist* 41,318-323 Sum-Jl 60.
- BUTLER, J Donald.** *Idealism In Education*. NY Harper And Row 1966.
Harper's Philosophy of Education Series includes, thus far, the present work, and books on pragmatism in education and existentialism in education. The author of the present work, a professor of religion, provides a brief history, a systematic synopsis, and an outline of the strength and weaknesses of idealist philosophy, and then highlights the significant features of an idealist-oriented philosophy of education. The author makes good use of the technique of summing up at the ends of certain chapters. In the idealist-oriented philosophy of education which the author puts forward, emphasis is placed on the student as a person, a self, a spirit.

This book contains a collection of previously unpublished papers on a variety of philosophical problems.
- BUTLER, Richard.** *The Mind Of Santayana*. Chicago Regnery 1955.
From a point of view characterized as "the realism of Aristotle and Aquinas," the clerical author launches a general attack upon Santayana's philosophy as vitiated by radical error in its fundamental theses. Santayana's scepticism is seen as a pose behind which lurks "Democritean materialism." In his exposition of the confused doctrine of essence, Santayana is both disingenuous and dogmatic, combining the errors of materialism and transcendentalism in his developed metaphysical system. While Santayana should be esteemed for his poetic gifts and stylistic talents, the author contends that his philosophy "belonged to him and should die with him."

- BUTTS, Robert E.** Necessary Truth In Whewell's Theory Of Science. *Amer Phil Quart* 2,161-181 Jl 65.
Almost alone amongst his nineteenth-century British contemporaries, Whewell maintained that genuine science develops in the direction of becoming a comprehensive system of laws that are both universal and necessary. The examination of Whewell's view of necessity in science begins with an analysis of his claims that necessity is not derivable from experience, that necessary propositions are such that their negations are not only false, but impossible, and that necessity is known by means of intuition. Whewell's theory of necessity is illustrated by a detailed analysis of his philosophy of classical mechanics. Finally, an attempt is made to show that Whewell tried to justify the forms of scientific thought that he regarded as necessary. Recent commentators have held either that Whewell made no attempt at justification (Ducasse), or that his philosophy of science was conventionalistic (Walsh).

- CAHN, Edmond.** *The Moral Decision: Right And Wrong In The Light Of American Law*. Bloomington Indiana Univ Pr 1955.
- Using actual decisions of American courts as materials for analytic study, the author proposes to discover what moral guides are to be found in American law. The book's first section presents a view of the consanguinity of "the legal" and "the good," based first on the recognition that morals constitute a legal order and second on the arguable hypothesis that law institutionalizes a moral order. The second part comes down to cases of a substantive character in the law of rights as adjudicated by American courts, including discussion of some rights recently established, and some that seem on the verge of being established, as well as of rights long since accepted in both morals and law. In the third part, the moral elements involved in procedural questions before the courts are analyzed.
- CAHN, Edmond.** *The Predicament Of Democratic Man*. NY Macmillan 1961.
- Democracy involves a shift from an imperial perspective to consumer perspective. Professor Cahn develops the implications of the consumer perspective by distinguishing collective and individual responsibility of citizens in a democracy and spelling out the nature and limits of those responsibilities. Citizens have a collective obligation to act in the prevention of, the reparation for, and protest against injustice within the state. As individuals, men have to search their own consciences as to their roles in cases of social injustice; and Cahn provides seven questions for such a search. He also discusses the positive incentives of democracy: passive equality, which demands the creation and perpetuation of conditions of equal justice, and active equality, which demands equal opportunities for all men in their search for self-fulfillment. The roles of officials and citizens are clarified by frequent reference to crucial court decisions.

- CAIRNS, Dorion.** "An Approach To Phenomenology" in *Philosophical Essays In Memory Of Edmund Husserl*, Marvin Farber (ed), 3-18. Cambridge Harvard Univ Pr 1940.
- Phenomenological method is essential to its accounts. Methodology is itself phenomenological, yields improved theory and methods, and evidentially grounded knowledge. It stresses observation of things themselves (of whatever sort: individual, generic and specific, actual or possible), in the manners peculiar to each sort. It is a reflective discipline, seeking to explicate the determinations of the mental processes as intensive to such affairs, and the affairs as intended to. Phenomenology is thus descriptive, eidetic and transcendental: the philosophical discipline of reflective criticism at every level, including that knowledge itself claims to produce.
- CAIRNS, Dorion.** "Phenomenology" in *A History Of Philosophical Systems*, V Ferm (ed), 353-364. NY Philosophical Lib 1950.
- The various contexts within which phenomenology can be developed are brought out. In the first section, the historical development is outlined, while the second presents the basic elements which distinguish phenomenological philosophy. In the latter, the main topics are: the essentials of evidence, the nature of eidetic sciences and their truths, and the intentionality of consciousness. The article concludes with a delineation of what constitutes transcendental phenomenology, with a specific discussion of the "general thesis of the natural attitude" and the "transcendental-phenomenological" attitude. The interrelation of these ideas is shown as the gateway to understanding the nature of reflective consciousness.
- CAIRNS, Dorion.** Concerning Beck's "The Last Phase Of Husserl's Phenomenology". *Phil Phenomenol Res* 1,492-497 Je 41.
- CAIRNS, Dorion.** The Ideality Of Verbal Expressions. *Phil Phenomenol Res* 1,453-462 Je 41.
- These components are distinguishable in verbal expressing: (1) the judging act, (2) the sense expressed by (3) the verbal expression, which is embodied in (4) sounds/marks, and (5) the thing(s) which the expression is about. The essay focuses on verbal expressions showing that they are ideal individuals: they remain identifiably the same through variations in their embodiments. While real individuals exemplify universals, verbal expressions are embodied by real sounds or marks. Expressions, like melodies or folk dances, combine ideality with mutability (historical change): they are thus ideal individuals and neither real individuals nor ideal universals.
- CAIRNS, Grace E.** *Philosophies Of History, Meeting Of East And West In Cycle-pattern Theories Of History*. NY Philosophical Lib 1962.
- In her Preface the author describes this book as "an introduction to some of the important approaches to the cyclical patterning of history in Eastern and Western thought." The Book is divided into three parts, dealing with three main types of cyclical theories of history: (1) recurrent cosmic cycles (Mesopotamia, Indian thought, Buddhism, Jainism, the Mandala, Eastern yogic philosophies, Chinese thought, Greek and Roman thought); (2) one-grand-cycle patterns (Hebrew-Christian, St Augustine, Moslem thought, Hegel and Marx, Aurobindo, Radhakrishnan); (3) culture cycles (Ibn Khaldun, Vico, Spengler, Sorokin, Toynbee). In a Conclusion the author "presents a defense of cyclical patterning of history."

CALLAHAN, John Francis. *Four Views Of Time In Ancient Philosophy.* Cambridge Harvard Univ Pr 1948.

In this book the author seeks to delineate four views of time in ancient philosophy including the metaphysical, physical and psychological elements involved. There are four chapters: (1) on Plato (Time, the Moving Image of Eternity); (2) on Aristotle (Time, the Number of Motion); (3) on Plotinus (Time, the Life of Soul); (4) on Augustine (Time, a Distention of Man's Soul). A conclusion compares and contrasts the four views and includes brief remarks on modern philosophical consideration of Time.

CAMERON, Kenneth Neill. *Marx And Engels Today: A Modern Dialogue On Philosophy And History.* Hicksville NY Exposition Pr 1976.

The present volume really is a dialogue; four characters explore the basic ideas of Marx and Engels on philosophy and history. It is a critical evaluation of the general theory. It seeks to probe the fundamentals of the world outlook which is the dominating commitment under which over a billion people work, think, struggle, live and die. The four characters involve the reader in a range of subjects such as monotheism, immortality, materialism, the meaning of life as well as general questions of the validity of Marx's ideas of social evolution. Two of the characters are Marxists, one doctrinaire, the other more imaginative. The third is a political activist lawyer with doubts about the significance of his own role. The fourth is a young woman social scientist, new to the movement and a critical searcher for answers.

CAMPBELL, C A. *On Selfhood And Godhood.* NY Macmillan 1957.

Part I aims at the constructive establishment of a concept of the self to undergird the theologically indispensable concept of the soul. Part II, concerned with the problem of God and the objective validity of religious belief, begins in religion as such, where theism is held to recommend itself strongly under a symbolic interpretation, then develops a metaphysical support for the central tenets of this creed.

CAMPBELL, C A. *Mr Edwards On "Ordinary Language And Absolute Certainty".* *Phil Stud* 1,60-63 Je 50.

CAMPBELL, George. *The Philosophy Of Rhetoric,* Lloyd F Bitzer (ed). Carbondale S Illinois Univ Pr 1963.

CAMPBELL, James Ian. *The Language Of Religion.* NY Bruce 1971.

The book begins with an historical summary of the rise and development of English analytical philosophy, with a description of logical positivism and the principle of verification, objections to the principle of verification, and Ludwig Wittgenstein's theory of language. Campbell then goes on to look at the contemporary attempts by religionists and non-religionists alike to clarify what is meant by religious statements. He refers to all of the relevant Anglo-American literature. A particularly significant chapter deals with the analyst's response to the classic proofs for the existence of God.

CAMPBELL, Keith. *Body And Mind.* Garden City NY Anchor Books 1970.

The author rejects interactionist dualism because there is no discernible mechanism showing how the alleged connection takes place, although it is admitted that on a regularity view of causation this objection would not hold.

CAMPBELL, Keith. *Family Resemblance Predicates.* *Amer Phil Quart* 2,238-244 Jl 65. Wittgenstein made the suggestion in the *Philosophical Investigations* that many predicates apply to objects in virtue of criss-crossing and overlapping resemblances between them. This paper attempts to develop that suggestion into a more systematic and precise account of what it is to be a family resemblance predicate, by what method such predicates may be detected and distinguished from other types, and in what way the distinction is important for logic. It is argued that making the distinction must be understood as part—and part only—of an attack on the traditional problem of justifying the use of general terms, that family resemblance predicates are essentially dependent on predicates of a more fundamental kind, and that hence not all predicates can be of the family resemblance type. It is argued further that although family resemblance predicates are clearly intelligible and doubtless exist in English, they suffer from disabilities which made their successful removal from our thought an improvement.

CANFIELD, John V. *The Compatibility Of Free Will And Determinism.* *Phil Rev* 71,352-368 Jl 62.

Canfield argues that free will is compatible with determinism. He explains how he understands the phrase "an event is determined" and then sketches four senses of the word "can". In terms of these four senses, he offers a sufficient condition of an act's being free, and then shows how a determined act could meet this condition.

CAPALDI, Nicholas. *Hume's Rejection Of "Ought" As A Moral Category.* *J Phil* 63,126-137 Mr 66.

A textual analysis of the is-ought paragraph in the context of the entire section of the *Treatise*, Hume's moral theory and philosophy as a whole, and his historical antecedents reveals that Hume was at no time discussing the derivation of 'ought' from 'is' nor was he making any case against naturalism. Rather he was attacking all forms of non-naturalism by questioning the meaningfulness of the alleged moral 'ought'. This attack is shown to be consistent with a naturalistic account of obligation and the derivability of all moral judgments from purely factual judgments, of which moral judgments are a subset in Hume's theory.

CAPALDI, Nicholas. *Some Misconceptions About Hume's Moral Theory.* *Ethics* 76,208-211 Ap 66.

CAPEK, Milic. *"Bergson's Theory Of Matter And Modern Physics" in Bergson And The Evolution Of Physics,* P A Gunter (ed), 297-330. Knoxville 1969.

This is an exposition of Bergson's theory of the physical world, but it also explores in a detailed way the question to what extent Bergson views anticipated certain features of contemporary physics. Among those are the dynamic nature of the relativistic time-space, the indeterminacy of microphysical events and the "vibratory" nature of matter. The author also tries to determine what is living and what is dead in Bergson's critical comments on relativity theory.

CAPEK, Milic. *"Ernst Mach's Biological Theory Of Knowledge" in Boston Studies In The Philosophy Of Science,* 400-420. NY Humanities Pr 1969.

Mach's epistemology, in contrast to the pre-evolutionary empiricism of Hume, Comte and Mach, is biologically oriented. Following in this respect Herbert Spencer, Mach

regarded the cognitive functions of human mind as a result of a gradual adaptation to our environment. But despite Mach's distrust of "mechanistic mythology," his critical attitude to Newton and his open-minded approach to non-Euclidian geometry, Mach's thought still belonged to the last century since, like Spencer, he assumed that the process of cognitive adaptation of human mind to reality is essentially completed. Similar conservative features are present in the thought of Helmholtz and Poincaré.

CAPEK, Milic. "Leibniz On Matter And Memory" in *The Philosophy Of Leibniz And The Modern World*, Ivor Leclerc (ed), 78–113. Nashville Vanderbilt Univ Pr 1973.

The article traces the development of Leibniz's thought from his original adherence to atomism to his panpsychistic monadism, first hinted at in 1670 by his definition of matter as "instantaneous mind." While Leibniz himself did not follow his hint that the mind-body problem should be approached from this angle, Bergson and Whitehead two centuries later did. But their panpsychism differs in several ways from that of Leibniz; it is neither strictly deterministic nor does it accept the reality of durationless instants. According to them, matter is a quasi-instantaneous mind, with a much shorter span of the present moment and thus possessing an element of indeterminism.

CAPEK, Milic. "The Elusive Nature Of The Past" in *Experience, Existence And The Good*, 126–142. Carbondale S Illinois Univ Pr 1961.

The problem of the status of the past is discussed. Its reality—or rather its subsistence—is inescapable as long as we give up the non-empirical notion of instantaneous present; as long as the present moment has a certain duration, it is tinged with the past. Furthermore, only the indestructibility of the past can make the difference between the historical truth and the myth, between a correct and false recollection, meaningful. But the immortality of the past does not mean its absolute changelessness as each moment continually "fades" more and more into the past.

CAPEK, Milic. "The Significance Of Piaget's Researches On The Psychogenesis Of Atomism" in *Boston Studies In The Philosophy Of Science*, 446–455. NY Humanities Pr 1971.

Piaget's researches on the formation of corpuscular explanations in child's mind under the pressure of ordinary (macroscopic) experience acquires its full significance within the genetic theory of knowledge and in the light of recent discoveries in microphysics.

CAPEK, Milic. "Time In Relativity Theory: Arguments For A Philosophy Of Becoming" in *Voices Of Time*, J T Fraser (ed), 434–454. NY Braziller 1966.

The essay consists of five parts: first, the arguments for the static interpretation of space-time are considered; second, the consequences of the constancy of the world-interval are stated; third, the dynamic character of space-time is pointed out; fourth, the very concept of the backwards flowing time is shown to be incompatible with relativity; and, finally, the status of "Now" and the potentiality of the future are discussed.

CAPEK, Milic. "Two Types Of Continuity" in *Boston Studies In The Philosophy Of Science*, 361–374. NY Humanities Pr nd.

The term "continuity" is indiscriminately applied to two very different things: a) infinite divisibility of space and time and b) intuitive qualitative continuity of immediate experience. The failure to distinguish them leads to serious confusions.

CAPEK, Milic. André Marie Ampère. *Encyclopedia Of Philosophy* 1,93–94 1967.

Ampère's philosophical views, his relations to Maine de Biran and his theory of matter as a product of inextensive dynamic atoms are discussed.

CAPEK, Milic. James's Early Criticism Of The Automaton Theory. *J Hist Ideas* 15,260–279 Ap 54.

James's rejection of the automaton theory, known on the continent under the name of psychophysical parallelism and today as "double aspect theory" was given in three of his early articles: "Are We Automata" in *Mind* (1879), "Remarks on Spencer's Definition of Mind as Correspondence" in *Journal of Speculative Philosophy* and "The Feeling of Effort" (1880), later reprinted in *Collected Essays and Reviews* (1920). The first of these articles was incorporated with very few changes into his *Principles of Psychology*, Chapter V. James criticized the difficulties, both logical and empirical, to which the doctrine denying the causal efficacy of consciousness leads.

CAPEK, Milic. Note About Whitehead's Definitions Of Co-Presence. *Phil Sci* 24,79–86 Ja 57.

Whitehead's two definitions of co-presence are analyzed. In *The Concept of Nature*, co-presence is defined as a dyadic relation holding between two events in one instantaneous space and is illustrated by one misleading example. Two years later, in *The Principle of Relativity*, it is defined as a relation between the event A and the whole four-dimensional region separating the causal past from the causal future of the same event. This is the same what Eddington called "Elsewhere." Only in his later writings Whitehead substituted a less misleading term "contemporary" to that of "co-present" which is easily confused with "co-instantaneous"; he also then correctly stressed the causal unrelatedness of the corresponding events.

CAPEK, Milic. Process And Personality In Bergson's Thought. *Phil Forum (Boston)* 17,25–42 1959–60.

CAPEK, Milic. Reichenbach's Early Kantianism. *Phil Phenomenol Res* 19,86–94 S 58. This article includes a more detailed discussion of Reichenbach's philosophical phase prior to 1920 and his attempt to extend the list of a priori categories by his own "transcendental deduction" of the category of probability.

CAPEK, Milic. Relativity And The Status Of Space. *Rev Metaph* 9,169–199 D 55.

This is a criticism of the static interpretation of the relativistic fusion of space with time. This interpretation is influenced by the perennial tendency to represent time in spatial terms which can be traced to the very dawn of Western thought. But it is also incompatible with an attentive analysis of the relativistic concept of space-time whose more appropriate name should be time-space. The fusion of space with time means a dynamization of space rather than a spatialization of time. There are only

spatio-temporal, not purely spatial relations. The classical Newtonian space, conceived of as an instantaneous cut in the four-dimensional world history does not exist; it is replaced by the zone of causal independence.

CAPEK, Milic. Simple Location And Fragmentation Of Reality. *Monist* 48,195–218 Ap 64.

Whitehead's criticism of the fallacy of simple location in space and time is nothing but another name for the rejection of the doctrine of external relations, i.e., fragmentation of reality into mutually external units. Long before Whitehead's criticism the rejection against the atomization of reality took place in psychology under the name of *Gestalt* Theory; even before that some outstanding physicists, such as Faraday and Maxwell, pointed out that the concept of isolated particle is a result of artificial abstraction since, as Mach later pointed out, "to neglect the rest of the universe is impossible." However, Whitehead went too far in holding that "everything is present everywhere"; this view would lead to another version of "the bloc universe" and is contrary to the present empirical evidence.

CAPEK, Milic. Stream Of Consciousness And "Durée Réelle". *Phil Phenomenol Res* 10,331–353 Mr 50.

As the title indicates, it is a comparative study of James' and Bergson's views of the inner perception of time; their affinities and differences are analyzed. The similarities of both concepts are greater than Bergson was willing to concede; their main differences are the following: Bergson generalized the results of his introspective analysis of psychological duration in applying it to the structure of time in general while James' analysis was originally confined to psychology. Second, Bergson from the beginning insisted on the "immortality of the past" which James originally did not accept. These two differences nearly vanished in the last metaphysical stage of James' thought when James, under the influence of Bergson adopted his own version of process philosophy, outlined in his last work *A Pluralistic Universe*.

CAPEK, Milic. The Development Of Reichenbach's Epistemology. *Rev Metaph* 11,42–67 S 57.

This article traces the evolution of Reichenbach's epistemological views from his original nearly orthodox Kantianism in his doctoral dissertation in 1917 to his conventionalism and physicalism. In the middle period Reichenbach adopted a biological theory of knowledge when he regarded the conceptual framework of classical physics as being based on our experience of the world of middle dimensions. The tension between this theory and his conventionalism persisted through the rest of his life.

CAPEK, Milic. The Doctrine Of Necessity Re-examined. *Rev Metaph* 5,11–54 S 51.

The article consists of four parts. In the first one the development of determinism from Democritus to the present is traced; the implicit tendency of both theological and naturalistic determinism to eliminate time is pointed out. In Part II it is shown that even in the timeless metaphysical systems, inspired by rigorous determinism, it is impossible to eliminate time at least on the phenomenal level. Part III attempts to show the logical incompatibility of the classical (Spinoza-Laplacean) determinism and succession. In Part IV the static interpretation of the relativistic space-time is criticized.

CAPEK, Milic. The Myth Of Frozen Passage: The Status Of Becoming In The Physical World. *Boston Stud Phil Sci* 2,441–463 1964.

This article is a becomingless interpretation of Minkowski's concept of space-time, although it is a culmination of the centuries-long tradition of the timelessly oriented philosophies, is incompatible with a more attentive interpretation of Minkowski's formula for the constancy of the world-interval.

CAPEK, Milic. The Reappearance Of The Self In The Last Philosophy Of William James. *Phil Rev* 62,526–544 O 53.

The article surveys the development of James' views on the status of the psychological subject (Self); the uncertainties and hesitations in James' views are pointed out. But, contrary to the prevailing view, upheld especially by John Dewey and Ralph B Perry, James' article "Does Consciousness Exist?" in 1904 does not represent the final stage of his thought. This can be found only in his last book *A Pluralistic Universe* six years later in which the existence of the "full self" is reasserted. James reached this conclusion after the period of intense intellectual struggle which can be traced in the private notes and drafts published by R B Perry. The idea of dynamic self was consonant with the process philosophy which James finally adopted.

CAPEK, Milic. The Theory Of Eternal Recurrence In Modern Philosophy Of Science, With Special Reference To C S Peirce. *J Phil* 57,289–296 Ap 60.

The cyclical theory of time is based on three basic assumptions: a) that the universe consists of distinct atomic entities, persisting through time and identifiable in different successive instants; b) that the number of these entities is finite (the finiteness of the world); c) that it is meaningful to speak about a definite state of the universe at each particular instant. All these assumptions are either rejected by contemporary physics or made highly questionable. Furthermore, there are logical difficulties inherent in the theory itself; the concept of absolutely identical repetition is meaningful in absolute linear time in which identical cosmic cycles succeed each other; but this would contradict the theory. Similar objections apply also to Peirce's view which is, furthermore, incompatible with the rest of his process philosophy.

CAPEN, Samuel P. Reflections On Freedom In Education. *Phil Phenomenol Res* 8,494–507 Je 48.

CAPITAN, W H (ed) and Merrill, D D (ed). *Art, Mind And Religion; Proceedings*. Pittsburgh Pittsburgh Univ Pr 1967.

This book contains the following selections: P H Nowell-Smith, "Acts and Locutions"; George Nakhnikian, "St Anselm's Four Ontological Arguments"; Hilary Putnam, "Psychological Predicates" (comments by Bruce Aune and U T Place); Stanley Cavell, "Music Discomposed" (comments by Joseph Margolis and Monroe C Beardsley, rejoinder by Cavell); Ninian Smart, "Mystical Experience" (comments by Nelson Pike and Paul F Schmidt, rejoinder by Smart).

CAPITAN, W H (ed) and Merrill, D D (ed). *Metaphysics And Explanation*. Pittsburgh: Pittsburgh Univ Pr 1966.

Proceedings of the 1964 Oberlin Colloquium in philosophy contained the following selections: S Korner, "On Deductivism as a Philosophy of Science"; J J C Smart, "Nonsense"; Joel Feinberg, "Causing Voluntary Actions" (comments by Keith S Donnellan and Keith Lehrer, rejoinder by Feinberg); Nicholas Rescher, "Evaluative Metaphysics" (comments by Lewis White Beck and Thomas E Patton, rejoinder by Rescher); Herbert Hochberg, "Things and Qualities" (comments by Richard Severans and J M Shorter, rejoinder by Hochberg).

CAPITAN, William H. *Philosophy Of Religion, An Introduction*. Indianapolis: Pegasus 1972.

To introduce the reader to the richness of the field, the author treats a variety of religious topics: the teleological argument for the existence of God; the problem of evil; revelation, miracles and immortality; faith and religious experience; and religious language. In the last chapter the meaning of life is discussed as viewed by contemporary writers, Zen Buddhism and the Death-of-God theologians. Each chapter contains a philosophical critique by the author, which finally suggests that religion is for making the adventure of life full and significant.

CAPITAN, William H. On Unity In Poems. *Monist* 50,188-203 Ap 66.

An examination of several poems leads to the conclusion that there can be no general test of poetic unity but, even so, unity can be meaningfully required in judging poems if it is sought within the conditions set by each poem. This means the canon of unity is tenable provided the notion of a universal poetic structure is abandoned and the very special structuring of the poet's mind is taken as the starting point in applying the canon. Indeed, unity is not a luxury superadded to a poem but a necessary condition of a poem's being anything at all.

CAPITAN, William H. Part X Of Hume's Dialogues. *Amer Phil Quart* 3,82-86 Ja 66. In Hume's Dialogues, Part X, Philo presents the trilemma attributed to Epicurus: "Is God willing but unable to prevent evil? Able but unwilling? Both willing and able? Whence, then is evil?" Some critics say Philo is trying to disprove God's existence. Some say he is not. I say he grants God exists as the first cause in order to show natural religion is impossible. For natural religion must establish God's benevolence, but it cannot combat "moderate scepticism" to establish any moral attribute of God. It would have to show first that men are for the most part happy—a proposition no one can prove both because it is contrary to everyone's feeling and experience and because it is impossible to compute all the pains and pleasures of all men. Philo's argument stands independently of the more frequently discussed four causes argument of Part XI.

CAPRA, Fritjof. *The Tao Of Physics: An Exploration Of The Parallels Between Modern Physics And Eastern Mysticism*. Berkeley: CA Shambhala 1975.

This speculative book explores alleged parallels between modern physics, Part I and Part II, the mystical aspects of "Eastern" religions and philosophies as described in very short expositions of Hinduism, Buddhism, Chinese "Thought," Taoism and Zen Buddhism; the parallels are about: the unity of all things, beyond semantic/logical opposites, space-time, emptiness and form patterns of change, the cosmic dance and the "new koans" of physics.

CAPUTO, John D. Kant's Refutation Of The Cosmological Argument. *J Amer Acad Relig* 42,686-691 D 74.

The author shows that Kant's refutation of the cosmological argument is fallacious, because it is false that the cosmological argument is committed to the ontological argument. The cosmological argument is no mere groping among concepts but rather establishes the existence of a necessary being—granted its premises. Kant fails to attack the dialectically spurious premises of the argument but is diverted by architectonic concerns into trying to link the cosmological argument with the ontological argument, a diversion which gives his opponent the upper hand.

CARAFIDES, John L. H Spiegelberg On The Phenomenology Of C G Jung. *J Phenomenological Psychology* 5,75-80 Fall 74.

I have tried to show that H Spiegelberg's assessment of Jung as phenomenologist is hasty. Taking some points mentioned: a) Jung could very well have been aware of the movement and its workers. Proof of this is now to be found in Jung's letters. Mention is made of Scheler (1927); b) I took exception to his view that Jung's concept of the collective unconscious does not lend itself to phenomenological verification. Here I elicit E Fink's statement in the appendix to the *Crisis* as support; and, c) He overlooks other obvious parallels, e.g., teleology, archetypes as a priori categories and others.

CARE, Norman S (ed) and Grimm, Robert H (ed). *Perception And Personal Identity*. Cleveland: 1969.

CARE, Norman S (ed) and Trelogan, Thomas K (ed). *Issues In Law And Morality*. Cleveland OH 1973.

Each symposium consists of a main paper, comments by a second speaker, and a reply. In Symposium I, Ted Honderich provides a very strong argument against political violence. Edmund L Pincoffs provides the comments centering on the concept of violence, uncritical presuppositions, and a distinction between "symbolic and non-symbolic violence." In Symposium II, Graham Hughes addresses disruption of legal processes and two types of justificatory account. The comments by Hyman Gross are directed to the assumption of a *prima facie* moral obligation to obey the law, and Hughe's claims as to what can count as justification for disruption. In Symposium III, Joel Feinberg argues first that if there are private immoral acts that cause no harm, there is no justification for their suppression by the state. Michael challenges Feinberg's approach more than his conclusions, and reaching normative conclusions from intuition in particular cases. In the final Symposium, Gerald G Maccaul Jr deals with the relationship between law and action in accordance with a person's conscience. Hugo Adam Bedau offers the critical comments.

CARLSSON, P Allan. Jung And James On The Typology Of World Views. *Journal Of General Education* 25,113-119 Jl 73.

Both Carl Gustav Jung and William James attempted to divide all men into two world-and-life viewpoints. James used "temperament" as his basic concept while Jung used "general attitude types." The first part of the paper comments briefly on Jung's discussion of James' typology in *Psychological Types*; Jung saw a comparison between James' tender-minded/tough-minded dichotomy and his own introverted/extroverted dichotomy. The second part develops Jung's expanded eight-fold typology, while the third part discusses the respective roles the typologies play in the systems of these two thinkers. Parallels and differences in the typologies are critically noted.

CARLSSON, P Allan. Jung On Meaning And Symbols In Religion. *Journal Of General Education* 22,29-40 Ap 70.

Carl Gustav Jung maintains that the emphasis on man's rational capability to the exclusion of his irrational tendencies have resulted in modern man's search for a soul. This excluded irrational tendency is part of the individual's unconscious, which includes both a personal unconscious and a collective unconscious. God is an archetype of the collective unconscious and thus is excluded from man's rational life. The unconscious attempts to contact the rational side of man through symbols. Personal wholeness is achieved through harmony among the parts of the personality. The peculiar use of important terms is analyzed and implications of the theory are critically noted.

CARLSTON, Kenneth S. *Law And Organization In World Society*. Urbana: 1962.

Justice is organized social action that makes and enforces laws so as to maximize the realization of values. To be effective, the state must express the values of its members via its authority, creatively planning, acting, and appraising its actions. Thus law is a statement of a pattern of social action necessary to express an idea. Today states are increasingly influenced by world-wide events. But decision-making of states continues to be particularistic. A world-authority is lacking. It can be created by a search for interstate agreement. The foregoing principles are illustrated by a study of national concession agreements in world society.

CARLYON, James T. Bowne In The Classroom. *Personalist* 28,266-272 Jl-Sum 47.

CARMAN, John Braisted. *The Theology Of Ramanuja: An Essay In Interreligious Understanding*. New Haven: Yale Univ Pr 1974.

In his book *The Theology of Rāmānuja*, the author has presented us with an outstanding piece of research on one of the great Hindu theologians of the Vedānta system. Beginning with a discussion of the methodology and an introduction to Rāmānuja's life and writings, the author develops the major aspects of Rāmānuja's doctrine of God and his influence upon the Sri Vaisnava movement. Carman's approach is historical and phenomenological, yet he, a Christian, points out the limitations of this methodology in his final chapter. The comparison of Carman's thought with Christian theological concepts, the discussion of the problem of the relation of unmerited grace to meritorious effort, and the question of natural theology, etc., will undoubtedly catch and hold the attention of Christian theologians and philosophers alike.

CARNAP, R. *Logical Foundations Of Probability*. Chicago Univ Of Chicago Pr 1950.

CARNAP, Rudolf (ed) and Jeffrey, R C (ed). *Studies In Inductive Logic And Probability*. Berkeley Univ Of Calif Pr 1971.

CARNAP, Rudolf. *Formalization Of Logic*. Cambridge Harvard Univ Pr 1943.

In this volume Carnap considers the question whether or not the connectives of the standard propositional calculus can be interpreted in a non-normal way, that is, contrary to the prescription of the normal truth tables. He presents a formal argument that they can be so interpreted and offers four examples of non-normal interpretation. Two of these would violate the principle of contradiction, two the principle of excluded middle.

CARNAP, Rudolf. *Introduction To Semantics*. Cambridge Harvard Univ Pr 1942.

Professor Carnap's monograph is a technical introduction to one of the newest fields of logical research. Semantics, as presented in this book, is one of the three main branches of semiotic, i.e., the theory of signs and languages; the other two branches are syntax and pragmatics.

CARNAP, Rudolf. *Logical Foundations Of Probability*. Chicago Univ Of Chicago Pr 1950.

The book makes a new approach to the old problem of induction and probability. It aims at the clarification and definition of the concept of probability in the sense of degree of confirmation and also the clarification of induction and construction of a system of inductive logic. Carnap here furnishes a theory of the logical relations between any hypothesis and any piece of knowledge that might be regarded as confirming evidence for the hypothesis. By defining the concept of confirmation and using the definition as the basis for constructing a logical theory, the author furnishes a system of inductive logic.

CARNAP, Rudolf. *Meaning And Necessity, A Study In Semantics And Modal Logic*. Chicago Univ Of Chicago Pr 1947.

CARNAP, Rudolf. *Philosophical Foundations Of Physics*. NY Basic Books 1966.

Carnap's new book succeeds in giving us one of the clearest statements concerning the major issues in the philosophy of science. Carnap deals with the definitions of length, time, and space as well as the role of theoretical terms, analyticity, observation and statistical laws in contemporary physical theories. Most fascinating is Carnap's attempt to show how Einstein's theory of relativity can also be accommodated by a strictly Euclidean geometry if we are willing to make the appropriate modifications in the classical laws of optics and mechanics. Also of primary interest is Carnap's use of the "Ramsey sentence" in order to show how theoretical terms can be replaced by class variables bound by the existential quantifier. A third point of interest is Carnap's claim that only "basic laws" are the kind that can sustain counterfactual statements. They are laws that "hold everywhere, at all times" and are formulated in terms of causal rather than logical modalities. In several chapters Carnap attempts to deal with the thorny issue of free will and determinism in which he defends Schlick's view that one is free unless he is compelled.

CARNAP, Rudolf. Remarks On Induction And Truth. *Phil Phenomenol Res* 6,590–601 Je 46.

CARNAP, Rudolf. Remarks On Probability. *Phil Stud* 14,65–74 1963.

Carnap gives a brief outline of the development of the field of logic during the prior ten years and specifies some points on which his views have changed since he wrote *The Logical Foundations of Probability* (1950). Some of the points of change and the resulting alterations are: 1) revised meaning of logical probability; 2) two (rather than one) triples of concepts connected with probability; 3) re-examination of certain key terms; 4) re-defining of the comparative concept; 5) the requirement of logical independence of atomic sentences abolished; 6) the requirement of completeness for the set of primitive predicates abolished.

CARNES, Robert D. Descartes And The Ontological Argument. *Phil Phenomenol Res* 24,502–511 Je 64.

This paper attempts to pinpoint explicitly the vicious circularity in Proposition I of Descartes' "geometrical demonstrations" of God's existence. The argument is treated both discursively and symbolically. Since the phrase "nature or concept" occurs crucially, the term "concept" is examined relevant to the following distinctions: (I) Property concepts—General and Individual (Enumerative and Descriptively unique) (II) Psychological concepts—depending on how one interprets "concept," the argument differs in form and conclusion. When "concept" is taken in the sense of: general property concepts and descriptively unique, individual property concepts—only a hypothetical conclusion is derivable.

CARNEY, James D. *Cogito, Ergo Sum And Sum Res Cogitans*. *Phil Rev* 71,492–496 O 62.

Carney argues that Hintikka is wrong in claiming that Descartes deduced *sum res cogitans* from *cogito, ergo sum* (Hintikka, "Cogito, Ergo Sum: Inference or Performance," *Philosophical Review*, Volume 71, Pages 3–32), in his Second Meditation. Descartes proved *sum res cogitans* in the Sixth Meditation, on the basis of clear and distinct ideas about myself and my body.

CARPENTER, Patricia. Musical Form Regained. *J Phil* 62,36–47 Ja 65.

Prevalent is the notion that music uniquely manifests "pure time." But to derive musical form then from its "temporal" matter is hazardous: structure, objectivity, wholeness are slighted; and because of the peculiar nature of the musical object, levels of form are easily confused. Musical form and content are not uniquely inseparable. Music seems "incorporeal," hence "temporal." But form as material shape is never separable from "stuff," be this "time" or clay. However, music is not "formed time," but a temporal *Gestalt*, and like any art, exploits pre-established formal schemes to shape a perceptual whole. Both tone—and time—art, inherent shaping forces of the medium, derive as well from tonal characteristics as from necessary repetition of an evanescent stimulus. In the concrete musical work, neither form nor content is bare "pure time." Aesthetic form, as outer manifestation of inner idea, is in any art inseparable from the total content expressed.

In this article, the author further develops his proposal, presented in previous articles, that painting presents a linguistic structure, by showing that shapes act as syntactic elements in the language of painting styles. He presents a counter-argument to Nelson Goodman's position by showing that shapes meet Goodman's criterion of syntactic discreteness by which he separates linguistic from other symbolic systems. The author utilizes current research in the area of picture-reading machines to show that style is a properly syntactical domain and that shapes are the primitive elements of the language of painting.

Cartwright criticizes an argument Geach presented in *Reference and Generality* against what he calls "the accepted treatment of referring expressions like 'some A.'"
She discusses the use of variables with mass nouns like "water" and judgments of identity with such nouns.
- CARTWRIGHT, Richard L.** Comments On Dr Hochberg's Paper On "The Ontological Operator". *Phil Sci* 23,260–265 Jl 56.
- CARTWRIGHT, Richard L.** Negative Existentials. *J Phil* 57,629–639 S–O 60.
The author examines two responses to the argument that there are no negative existentials. Inflationism contends that so-called existential statements are of two quite different kinds; taken as denials of being, negative existentials are all false; taken as denials of existence, not all negative existentials are false. Deflationism holds that negative existentials are not about those things whose existence they deny. The author criticizes both views, holding that inflationists wrongly take statements like "Dragons do not exist" as typical of negative existentials generally and that deflationists do the same with statements such as 'Carnivorous cows don't exist'.

- CARY, Joyce.** *Art And Reality: Ways Of The Creative Process.* NY Harper 1958.
- CARY, Stephen G And Others.** *Speak Truth To Power, A Quaker Search For An Alternative To Violence.* Philadelphia 1957.
This pamphlet is a study of international conflict prepared by a study group for the Friends' Service Committee. It analyzes the present world scene, America's response to it, and the weaknesses in this response. A non-violent method is suggested as an alternative to violence—in essence, the Gandhian approach. This non-violent resistance should be based upon three elements: non-cooperation, good will, non-violence. No utopia is expected, but the authors contend that the alternative to non-violence would be atomic violence—"a virulent, if not final, instrument for the destruction of liberty and the dehumanizing of men."

- CASE, Shirley Jackson.** *The Origins Of Christian Supernaturalism.* Chicago Univ Of Chicago Pr 1946.
- CASEY, John (ed).** *Morality Et Moral Reasoning.* NY Barnes & Noble 1971.
The five essays represent current work on ethics which is being done among younger philosophers at Cambridge. The first is: *Morality and the Emotions*, by Bernard Williams. R Scruton in: *Attitudes, Beliefs and Reasons*, analyses the concept of "attitudes" and defends a form of "emotivism." S W Blackburn, in: *Moral Realism*, denies that a correspondence theory of truth can be applied to moral judgements on the ground that it is inconsistent with the combination of the two propositions that moral properties cannot vary without factual varying and that some moral propositions at least are not entailed by any factual. J E J Altham, in: *Evaluation and Speech*, also considers the relation of moral judgements to factual. J Casey, in: *Actions and Consequences*, discusses the distinction between killing and letting die as employed in cases where a doctor has to decide between the life of a mother and that of her unborn child.

CASSIRER, Ernst. *The Myth Of The State.* New Haven Yale Univ Pr 1946.

Professor Cassirer's concern in this book is to set in historical perspective and to determine the significance of the re-emergence of myth and mythic thinking in the twentieth century. The book begins with four chapters on the nature and function of myth in general, and continues with a series of studies of political thinkers who moved steadily toward a more nearly adequate rational or scientific political theory and away from mythic thinking. These essays on the "Struggle against Myth" are followed by studies of Carlyle, Gobineau, and Hegel, accenting their contribution to the ingredient ideas which operated as bases for the final expression of the totalitarian myth of the state.

CASSIRER, H W. *A Commentary On Kant's 'Critique Of Judgement'.* NY Barnes & Noble 1970.

CASSIRER, H W. *Kant's First Critique.* NY Humanities Pr 1954.

The book represents probably the first published attempt to assess Kant's work from a point of view thoroughly influenced by modern positivism. It does not claim to deal with the text in detail and could not be described as a thorough commentary, but aims rather at making clear and assessing Kant's general point of view. The interpretation is realistic as regards physical objects and very negative as regards metaphysics.

CASTAÑEDA CALDERÓN, Héctor Neri. *The Structure Of Morality.* Springfield IL Thomas 1974.

CASTANEDA, Hector Neri. "Ought" And Assumption In Moral Philosophy. *J Phil* 57,791-802 D 60.

The author examines the extent to which it is true that 'ought'-sentences can be characterized as (1) entailing or involving imperatives, or (2) being used to tell somebody what to do or to do something. He criticizes Hare's view, arguing that it is not the common function of 'ought'-sentences to tell somebody what to do or to do something. Whereas imperatives are used only assertively, he claims, normatives may be used unassertively as well as assertively.

CASTAÑEDA, Hector Neri. "7 + 5 = 12" As A Synthetic Proposition. *Phil Phenomenol Res* 21,141-158 D 60.

The study here discusses Kant's claim that (most) arithmetical propositions are synthetic, and elucidates its truth together with the importance of his view that numbers are relations of objects to their parts. This unfashionable view and Kant's insights are developed more completely. The author formulates Kant's idea of a synthetic proposition, provides a test for deciding whether a proposition is synthetic or not, and argues for the plausibility of Kant's views of ordinary arithmetic propositions.

CASTANEDA, Hector Neri. Correction To "The Logic Of Obligation" (A Reply). *Phil Stud* 15,25-27 1964.

CASTANEDA, Hector Neri. Criteria, Analogy, And Knowledge Of Other Minds. *J Phil* 59,533-546 S 62.

This paper examines an argument, due to Norman Malcolm (*Journal of Philosophy*, Volume 55, 1958), against the classical view that knowledge of other minds is based on analogy with knowledge of one's own mind. The contention is that this argument almost proves something important but that this is not what appears in its conclusion. Malcolm uses his argument for two different purposes: to refute the classical view and to establish a contrary view of his own. However, as a refutation the argument tries to prove too much and involves a debatable premise. As a result the crucial issues between Malcolm and the classical view are obscured.

CASTANEDA, Hector Neri. Imperative Reasonings. *Phil Phenomenol Res* 21,21-49 S 60.

The purpose is to re-examine "the logic of imperatives," and discuss in what sense there are imperative inferences. Castaneda agrees with R Hare, that there are legitimate imperative inferences. He tries to formulate the imperative analogues of truth-values, which are involved in the validity of imperative inferences. The author suggests an intimate connection between imperatives and (ought) sentences, and

finally shows the logical relations between imperatives, indicatives and (ought) sentences.

CASTANEDA, Hector Neri. Professor Bar-Hillel On Nonformal Implications And Phenomenalism. *Phil Stud* 12,85-90 1961.

In this article Castaneda responds to an article by Bar-Hillel in which Bar-Hillel charges that Castaneda, in a previous article, has failed to distinguish between sentence-types and sentence-tokens and between non-indexical and indexical sentences. Castaneda's response is to go into an earlier paper by Bar-Hillel which Bar-Hillel claims could have saved Castaneda from the alleged error. Castaneda argues among other things, that (a) Bar-Hillel's discussions are for the most part irrelevant to a study of nonformal logical relations and that (b) his claim that indexical sentences cannot stand at all in logical relations is false. He concludes that as a result of (b) Bar-Hillel's "simplest" proof of the impossibility of any strictly phenomenalist language collapses.

CASTANEDA, Hector Neri. Some Nonformal "Logical" Relations. *Phil Stud* 8,89-91 1957.

CASTANEDA, Hector Neri. The Logic Of Change, Action, And Norms. *J Phil* 62,333-343 Je 65.

This is an attempt to clarify some points in the logic of norms via a critical examination of G H Von Wright's *Norm and Action*. In this book Von Wright makes an admirable attempt at formulating the formal propositional logic of norms and assertions about actions. To this end he successfully develops four beautiful calculi: (a) one for the elementary logic of change, (b) one for the logic of action, (c) one for the general logic of norms, and (d) one for the logic of hypothetical norms.

CASTANEDA, Hector Neri. The Logic Of Obligation. *Phil Stud* 10,17-22 1959.

CASTANEDA, Hector-Neri (ed) and Nakhnikian, George (ed). *Morality And The Language Of Conduct.* Detroit 1963.

This book contains essays by H D Aiken, R B Brandt, Hector-Neri Castaneda, W D Falk, W K Frankena, John Ladd, George Nakhnikian, Francis V Raab, and Wilfrid Sellars, on the nature of morality as an institution and on the nature and functions of the language of conduct.

CATLIN, G E G. *Political And Sociological Theory And Its Applications.* Ann Arbor 1964.

A series of lectures on the problems of eternal peace, the nature of democracy, the role of education, and the philosophical and political background of the first amendment. Through the discussions, the question of the role of political theory (which is said to include philosophy and science) is raised.

CATON, Charles E. A Stipulation Of A Modal Propositional Calculus In Terms Of Modalized Truth-values. *Notre Dame J Form Log* 4,224-226 1963.

CATON, Charles E. An Apparent Difficulty In Frege's Ontology. *Phil Rev* 71,462-475 O 62.

Frege held three positions which seem to be inconsistent: 1) the sense of an expression is an object, 2) the senses of some expressions are unsaturated, and 3) no object is unsaturated. Caton shows the reasons why Frege held these doctrines, and goes on to argue that they are not really incompatible. This resolution leads to further consideration of the notion of unsaturatedness.

- CAVARNOS, Constantine.** *Byzantine Thought And Art: A Collection Of Essays.* Belmont MA 1968.
- CAVARNOS, Constantine.** *Modern Greek Thought.* Belmont MA 1969.
- This book provides an opportunity for the English-reading world to learn the fate of philosophy in modern times in the land of its birth—Greece. It is composed of three studies, the first of which is an "Introduction" to modern Greek philosophy from 1750 to the present, through a discussion of its distinctive characteristics: the use of ancient Greek philosophy as a preparatory discipline to philosophize within Christian belief about the meaning of human existence. The second essay, "Critique of Science," maintains that "the modern Greeks have not overestimated the values and capabilities of the positive science," ranking philosophy above science and Christian teaching above philosophy. The third essay deals with "Views of Man's Nature and Destiny," showing the continuation among modern Greeks of their Byzantine tradition of a deep interest in man and the consideration of him "as the highest created being."

- CAVELL, Stanley** and Sesonske, Alexander. Logical Empiricism And Pragmatism In Ethics. *J Phil* 48,5-16 Ja 51.
- A division has arisen within the naturalist school of moral philosophy, with the contenders being "the emotive theorists vs. the cognitive theorists." The author suggests that the fundamental agreements between the groups far outweigh the peripheral and sometimes illusory disagreements. The article establishes the areas of agreement, deals with illusory disagreements, and indicates the peripheral disagreements can be considered disagreements in emphasis.
- CAVELL, Stanley.** Austin At Criticism. *Phil Rev* 74,204-219 Ap 65.
- Cavell discusses Austin's methods and purposes in doing philosophy, touching on Austin's distinction-making and the importance he put on gathering empirical facts. He also examines the "new way" in which Austin criticized previous philosophers and traditions.
- CAVELL, Stanley.** The Availability Of Wittgenstein's Later Philosophy. *Phil Rev* 71,67-93 Ja 62.
- Cavell criticizes David Pole's *The Later Philosophy of Wittgenstein* for severely misinterpreting Wittgenstein. He tries to set things right by treating some major topics in the later Wittgenstein, showing what Wittgenstein said, and explaining how Pole misunderstood him. These topics are: rules, decision, the relevance of the appeal to everyday language, and the knowledge of our language. Cavell closes with some comments on the style of the *Philosophical Investigations*.
- CAWELLI, John G.** Conformity And Democracy In America: Some Reflections Occasioned By The Republication Of Martineau's *Society In America*. *Ethics* 73,208-213 Ap 63.
- Harriet Martineau's comments on 19th century America differ from and agree with Tocqueville's ideas in interesting ways. Martin Lipset's introduction to the book claims she agrees with Tocqueville on the idea that Americans are conformist in spite of the official ideology of liberty and individualism, but this author thinks Martineau's analysis differs significantly. For Martineau, conformity was not a product of democracy, but of the desire for individual or group advantage. She also argues that vocal minorities exploit majority apathy and present themselves as expressing a large consensus, posing a danger to free thought and action.
- CAWS, Peter.** *Science And The Theory Of Value.* NY Random House 1967.
- CAWS, Peter.** *The Philosophy Of Science.* Princeton NJ Van Nostrand 1965.
- Among the subjects with which Caws deals are dispositions, theoretical constructs, propositions, protocol sentences, hypotheses, axioms and theorems of higher and lower calculi, models, measurement, the calculus of probability, degree of confirmation, causality, determinism, emergence, conventionalism, and the relation of science to the humanities. But few of these topics are examined in any great detail. The sections on probability are the most developed and Caws argues effectively that Hume's critique has not been answered by any contemporary analysts.

- CAZDEN, Norman.** Towards A Theory Of Realism In Music. *J Aes Art Crit* 10,135-151 D 51.
- CELL, Edward.** *Language, Existence And God.* Nashville Abingdon Pr 1971.
- This extensive study begins by acknowledging that linguistic philosophy has been evoked by cultural conditions and goes on to ask: what sort of response to cultural exigencies is logical analysis? Symptom? Despair? Band Aid? The specific? The focus for E Cell's investigations is the possibility of talking about God in a meaningful way. This study concludes that analytic philosophy, having neglected problems of supreme importance for human life, is accordingly a symptom of the depersonalization of our time. The analyses of the later Wittgenstein and of Wisdom, however, escape that judgment, because both make important contributions toward the renewal of meaning. Specifically, Wisdom's metaphysics is found to be theologically meaningful and can be related to the philosophical theology of Paul Tillich.

- CHANDLER, Hugh S.** Three Kinds Of Classes. *Amer Phil Quart* 3,77-81 Ja 66.
- The difficulties in which we find ourselves when we become entangled in the still continuing debate between nominalists and realists, as well as many other difficulties, arise in part from our lack of reasonably precise technical terms for kinds of classes. In this paper I define three kinds of classes suggested to me by remarks in the writings of William Whewell and Dugald Stewart. When the distinctions between these kinds of classes are made clear we can better understand Wittgenstein's notion of "family resemblance"; but it becomes unclear that there is anything in this notion that should distress a realist. Members of a class can share one nature, or, I suppose, one idea, even though there are no characteristic features that all these members have in common.

- CHANG, C C** and Keisler, H J. *Continuous Model Theory*. Princeton NJ Princeton Univ Pr 1966.
- This monograph is the first really systematic study of the model theory (semantics) of many-valued logic. The first three chapters are concerned with preliminaries on topology, model theory, and continuous logic. The next chapter examines the relation of elementary equivalence among models, including the downward Skolem-Löwenheim theorem; the fifth chapter contains the generalizations of such classical results as the compactness and upward S-L theorems. The authors specialize their work in the sixth chapter to consider certain particular kinds of models: saturated models, universal models. The last chapter considers classes of models closed under various algebraic operations.

- The purpose of this article is to bring to light attempts at arms control in the Eighteenth century. The humanistic aim of such attempts is discussed, and their success in more realistic terms is analyzed. The views of Montesquieu, Brun de Condamine, and Bory are included. The author's conclusion is that after the

Eighteenth century the unity of science and morality had been destroyed, leaving the development of new weapons unrestricted by any moral coercion. Early attempts at arms control were effective to the degree they were, just because this separation had not yet occurred.

CHAPMAN, John W (ed) and Pennock, J Roland (ed). *Equality*. NY Atherton Pr 1967. The ninth yearbook of the American Society for Political and Legal Philosophy contains eighteen essays. The first six essays discuss the various meanings of "equality" and the various kinds of egalitarianism. The next five essays consider the roles of equality in Christianity, Judaism, Hinduism, and existentialism. And the final seven essays examine political equality as it applies to the individual and to nations.

CHAPMAN, John W. Rousseau, Totalitarian Or Liberal? NY Columbia Univ Pr 1956. This is not a book about Rousseau's influence, but an examination of his political theory "with a view to explaining the sense in which it deserves to be called liberal" even though "it does contain illiberal elements." Rousseau differs from classical liberalism in a way that relates him to modern liberalism with its sense of man's "social dependence" without sacrifice of individuality. Yet the "key to Rousseau's moral and political theory" remains "individual autonomy" that is not "atomism."

CHAPPELL, V C (ed). *The Philosophy Of Mind*. Englewood Cliffs NJ Prentice-Hall 1962.

CHAPPELL, V C. Comments On Donald Davidson's "Actions, Reasons, And Causes". *J Phil* 60,700-701 N 63.

CHAPPELL, V C. Particulars Re-Clothed. *Phil Stud* 15,60-64 1964.

The article goes into Allaire's paper "Bare Particulars" in which Allaire seeks to reconcile what he calls the "individual-character analysis" of things like colored discs with the Russellian "principle of acquaintance." The author argues that the individual-character analysis is founded on certain views about reference that are either wrong or merely true by definition. Concerning the principle of acquaintance he charges that Allaire makes the false assertion that there is a sense of "know" in which "to know" means "to be acquainted with." He concludes, among other things, that since both views are incorrect the task of reconciling them is no real problem.

CHAPPELL, V C. Sameness And Change. *Phil Rev* 69,351-362 Jl 60.

CHAPPELL, V C. Time And Zeno's Arrow. *J Phil* 59,197-212 Ap 62.

A number of recent writers have made use of arguments of Zeno to help establish crucial tenets of their own philosophies of nature. This paper examines such use by Bergson, Whitehead, Russell, and Weiss of one of Zeno's four motion arguments, the so-called Flying Arrow. The main purpose of this examination is to throw light on some recently proposed views of motion and time and to offer some considerations relevant to their assessment.

CHAPPELL, Vere C. Ego And Person: Phenomenology Or Analysis. *Monist* 49,18-27 Ja 65.

In my contribution to the symposium, "Phenomenology and Analysis," I both discuss and make use of the methods of the linguistic analyst; I also make some critical observations about the phenomenologist's description of his supposedly alternative method, or at least about Spiegelberg's description in his symposium paper. I claim that the phenomenologist misdescribes his method, though I admit that some linguistic analysts have misdescribed their methods as well. I then suggest that it is less misleading to regard both as concerned with concepts than with either "phenomena" or words. In making use of the analytic method, I attack some of the problems about persons which Spiegelberg discusses in his paper; in particular I take issue with his view that persons and bodies are different entities.

CHAPPELL, Vere C. Response To Professor Chisholm. *Monist* 49,36-37 Ja 65.

CHAPPELL, Vere C. Whitehead's Theory Of Becoming. *J Phil* 58,516-527 S 61.

The author criticizes Whitehead's epochal theory of time, according to which time (or becoming) is not a continuous process but an atomic succession. The criticism is twofold. The author argues, first, that the position itself is unintelligible and, second, that the argument on which Whitehead rests this position is invalid. This criticism does not, however, affect the major elements in Whitehead's account of actual occasions because, the author asserts, the role played by philosophical arguments in Whitehead's thought, such as Zeno's argument, is relatively slight.

Hilary Putnam's model of thermodynamic reversibility gives rise to the following questions, which this paper attempts to answer: (1) Is a time with "reversed entropy" conceptually admissible at all, and if so, in what context? (2) Can Oscar Smith in the Putnam reversed-entropy apparatus communicate information to somebody who is living in the ordinary entropic time? (3) Do relativistic and quantum-theoretical (for example, Feynman-Stückelberg) models, in which the time coordinate can take on decreasing instead of increasing values, carry unsuspected metaphysical implications?

CHARLESWORTH, Maxwell John. *Philosophy And Linguistic Analysis*. Pittsburgh Duquesne Univ 1959.

A thorough exposition of the philosophy which has become dominant in England, during the present century, is offered in this book. G E Moore's critique of idealism and his combination of analysis with certain common sense convictions, together with Bertrand Russell's early views on language and logic, are discussed as elements in the background of Wittgenstein's teaching. Some information on the relation of emotive ethics to the central program is given. There is a survey of more recent analytic trends at both Oxford and Cambridge. Throughout, the author offers penetrating criticisms which in no way detract from his major aim: "to present the main ideas of the analysis as completely and as objectively as possible."

CHARRON, William C. Death: A Philosophical Perspective On The Legal Definitions. *Washington Univ Law Quarterly* 979-1008 1975.

This article considers the logic appropriate to arguments concerning legal definitions, and especially the definition of death. It also evaluates various definitions of death set forth by state legislatures, courts, and professional organizations, all of which equate human death with a physiological state of one sort or another, e.g., total brain death. In turn, a definition of human death on a psychological plane that identifies death with the permanent loss of all consciousness is advanced and defended in respect of various semantic and ethical criteria developed from a consideration of the problems and interests surrounding the definitional debate.

CHASE, Richard. *Quest For Myth*. Baton Rouge 1949.

This recent essay in mythologistics attempts to develop a theory by means of which mythic phenomena may be interpreted and accounted for; it tries as well to dispel the obscurity that the author feels is resultant upon certain other theories by placing these theories and attitudes toward myth in "proper perspective."

- The purpose here is a critical examination of Newton's view of the role of hypotheses in physical science. It is maintained that an hypothesis supposes some physical entity or mechanism behind some phenomenon to explain the latter; these causal agencies behind the phenomena are the crux of serious hypotheses in the practiced methodology of science. However, Newton as a person was afraid of controversy and exposure, and because of his abnormal mental complexes and personality, what he talked about was really description (quantitative laws of observed events); this was safer. So, as the scientist, he worked normally, but as the man, writing about his work (mostly in controversy with critics) he deviated from a correct grasp and expression of what he was doing—the methodology of science.

- CHENG, Chung-ying.** *Philosophical Aspects Of The Mind-Body Problem*. Honolulu Univ Pr Of Hawaii 1975.
- This book consists of a number of short selections covering various aspects of the mind-body problem. The first six authors discuss the identity thesis. The next author explains why our knowledge of other minds is more dependable than our knowledge of our own mind, and there are essays on Russell's view of perception and Mortimer Adler's position as it relates to the mind-body problem. Two essays criticize physical reductionism and the possible mechanization of thought processes. Finally, an essay discusses the methodological aspects of psychological research on mind-body relationships beginning with the work of Fechner.
- CHENG, Chung-ying** and Resnik, Michael David. Ontic Commitment And The Empty Universe. *J Phil* 62,359-363 Jl 65.
- In standard quantificational theory the validity of a quantificational schema such as $(\exists x (Fx \vee \neg Fx))$ is defined over nonempty universes. The objection has been made, however, that, because of this, logic will force existence claims upon us. To avoid this objections, it has been suggested that Quine's criterion of ontic commitment be modified in such a way that quantificational logic should not commit us to at least one thing. The purpose of this paper is to show that this problem is not as serious as it appears. After accepting the standard definition of quantificational validity, one can always make a distinction between defining quantificational validity and interpreting quantifiers in a quantificational schema, and then there need be no alarm that the standard quantificational theory should force any particular existence claims upon us; for the exclusion of empty universes from the standard definition of quantificational validity does not entail ontic commitment to particular things.

- CHERRY, Conrad.** *The Theology Of Jonathan Edwards: A Reappraisal*. Garden City NY Anchor Books 1966.
- This book is competent exposition of an important figure in the history of religion in America whose work is in many ways relevant to contemporary Protestant thought.
- CHERRY, George L.** The Role Of The Convention Parliament (1688-89) In Parliamentary Supremacy. *J Hist Ideas* 17,390-406 Je 56.
- CHESSICK, Richard D.** Neurological Studies And Philosophical Problems. *Phil Sci* 20,300-312 O 53.
- CHIARAVIGLIO, Lucio.** Strains. *J Phil* 58,528-533 S 61.
- According to Whitehead, actual entities contribute to the becoming of other entities, to their definiteness and position. This paper elucidates the reproduction of eternal objects in physical feelings in terms of definiteness and position, illustrating the reproductive character of physical feelings by the particular case of strains.
- CHIARI, Joseph.** *The Necessity Of Being*. NY Gordian Pr 1973.
- This book is a discussion ranging from the Greeks to the present.
- CHIARI, Joseph.** *Twentieth-Century French Thought: From Bergson To Lévi-Strauss*. NY Gordian Pr 1975.
- French thought from Bergson to the current structuralism of Lévi-Strauss, Foucault and Althusser is examined. There is a presentation of Bergson's metaphysics of creative evolution and of interesting relationships between bergsonian themes and the philosophical poetry of Valéry. A lucid discussion of Merleau-Ponty's phenomenology of perception and of man as incarnated consciousness is presented. Summaries of the religious existentialism of Marcel, Lavelle's philosophy of Being and of the background of existentialism are offered. Sartre's phenomenological ontology is surveyed and his theory of the negative structure of consciousness is critically examined. Albert Camus' image of man and his notion of the absurd are touched upon in a few pages and the mysticism of Simone Weil and de Chardin's theory of spiritual evolution are sympathetically discussed.
- CHIAROVIGLIO, Lucio** and Sweet, Albert M. The Pragmatics Of Truth Functions. *Notre Dame J Form Log* 5,191-198 1964.
- CHIHARA, C S** and Fodor, J A. Operationalism And Ordinary Language: A Critique Of Wittgenstein. *Amer Phil Quart* 2,281-295 O 65.
- This paper explores some lines of argument in Wittgenstein's post-*Tractatus* writings in order to indicate the relations between Wittgenstein's philosophical psychology, on the one hand, and his philosophy of language, his epistemology, and his doctrines about the nature of philosophical analysis on the other. The authors maintain that the later writings of Wittgenstein express a coherent doctrine in which an operationalistic analysis of confirmation and language supports a philosophical psychology of a type the authors call "logical behaviorism." They also maintain that there are good grounds for rejecting the philosophical theory implicit in Wittgenstein's later works. In particular, they first argue that Wittgenstein's position leads to some implausible conclusions concerning the nature of language and psychology; second, they maintain that the arguments Wittgenstein provides are inconclusive; and third, they sketch an alternative position which they believe avoids many of the difficulties implicit in Wittgenstein's philosophy.
- CHIHARA, Charles S.** *Ontology And The Vicious-circle Principle*. Ithaca NY Cornell Univ Pr 1973.
- CHIHARA, Charles S.** Mathematical Discovery And Concept Formation. *Phil Rev* 72,17-34 Ja 63.
- Chihara considers the question of whether the activity of a mathematician is discovering truths independent of us, as realists such as Russell have held, or creating concepts, as Wittgenstein held. Both sides in the question have been guilty of exaggeration and failure to consider all the relevant phenomena; before being in a position to answer the question, therefore, we must first clarify the issues and bring out all the activities that the mathematician is engaged in.
- CHIHARA, Charles S.** On The Possibility Of Completing An Infinite Process. *Phil Rev* 74,74-87 Ja 65.
- This paper is concerned with one facet of Zeno's Achilles paradox. The problem

examined is found in the argument stated roughly as follows. To catch the tortoise, Achilles must first traverse an interval of length $1/2$, and then he must traverse one of length $1/4$, and then one of length $1/8$, and so on ad infinitum. If Achilles could succeed in catching the tortoise, he could succeed in completing an infinite process. But if it is conceivable that Achilles could succeed in completing an infinite process, it appears equally conceivable that a being (perhaps a superhuman one) might succeed in completing, say, the infinite process of computing all the digits in the decimal expansion of π . But it surely is not conceivable that a being might complete an infinite process. Hence, Achilles could not succeed in catching the tortoise. The author examines the basic assumptions of the above argument and critically investigates various attempts to evade the force of the argument. The notion of *analysis-engendered* infinite sequence is utilized by the author in maintaining that the basic assumptions regarding space and motion found in the above argument need not be rejected in order to reject the conclusion.

CHILD, Arthur. *Interpretation: A General Theory.* Berkeley Univ Of Calif Pr 1965. Constrained to supply its own background, the book constructs four types of hermeneutics with variants. Working within one of these types, "imitation," it elaborates the nature of interpretation. It then carefully reviews the historical contributions to the typology of interpretation and proceeds to work out a more comprehensive typology. Next, the theory is defended against the strongest threat to its validity on epistemological grounds. The last chapter considers the problem of the justification of hermeneutic methods.

CHILD, Arthur. Doing And Knowing. *Rev Metaph* 9,377-390 Mr 56.

One branch of operationism relates knowing to making, the other to doing. The latter is here sketched in several variants. The following primary variants are recognized: action is a necessary condition of knowledge, knowledge is action, the act of knowing is the action known. Problems and possibilities within these variants are then developed and judged. The essay concludes with a consideration of belief, error, and wisdom.

CHILD, Arthur. Five Conceptions Of History. *Ethics* 68,28-38 O 57.

The five conceptions center about the relation between history as inquiry and history as object of inquiry: Imitation, for which the historian strives to reproduce the past; creation, for which he makes the past; resurrection, for which he brings the past to life again; reconstruction, for which he restores the missing past to the surviving fragments; transformation, for which history is the whole process from the original fact to its latest existence in the mind of the historian. The conceptions are presented first in their critical relations to each other, then in their logical relations.

CHILD, Arthur. Hermeneutics Again. *Genre* 3,97-110 Mr 70.

In commenting on the hermeneutic treatise of Richard E Palmer, opportunity is taken to review the history in the United States of the general theory of interpretation, to condemn the identification of modern hermeneutics with Gadamerism and the claim that Gadamerism is indispensable to the general practice of literary interpretation, and to point out the emergence of the elements of Gadamerism in British-American philosophy over the last century.

CHILD, Arthur. Making And Knowing In Hobbes, Vico, And Dewey. *Univ Calif Pub Phil* 16,271-310 1953.

Each of these philosophers claims that knowing a form of making. For each philosopher, the essay develops the general thesis and shows its exemplification in geometry, in physics, and in the science of society. It then discriminates and formulates the more serious issues that emerge from the contraposition of these similar yet disparate thinkers.

CHILD, Arthur. Moral Judgment In History. *Ethics* 61,297-308 Jl 51.

If the historian may properly issue moral judgments (a debatable function), on what should he direct them? there are problems about judging motives; also about judging intentions in the sense of contemplated effects. And what should the judgments consist in? The application of the historian's standards? of contemporary standards? and, if so, which standards? and must they have been accepted by the person judged? And should the historian restrict himself to judgments found in the historical materials, or must he himself assume the responsibility of judging? It is concluded that the genuine difficulties reside in unclarity of moral theory.

CHILD, Arthur. On The Theory Of The Categories. *Phil Phenomenol Res* 7,316-335 D 46.

Categories are distinguished into two main types: the primal biotic, inhering in man's nature, and the supervenient social, deriving from experience. Categories in act are defined as formalizing intentions; categories in potency, as predispositions to take the world in some schematic manner. Categorical predispositions are distinguished from others by their necessity; primal from supervenient categories by their universality. The relation between concepts and the two types of categories is examined at length. Finally, the functional definition of apriority is shown to entail the mutability of the supervenient categories, though the process of change may be long, gradual, indistinct, and partial.

CHILD, Arthur. Reflection: Its Nature And Its Philosophic Import. *Phil Phenomenol Res* 19,1-15 S 58.

Reflection, an interpretive concept popular under Marxist influence, raises a number of problems of knowledge, being, and method: How is it related to other forms of representation? What might be its relations to knowledge? Can the reflecting mind be aware of what it reflects? Is the object reflected the intentional object in any sense of the reflective act? Are efficient causation or influence at work in the reflective relation? What can be said about the priority of the reflected to the reflection? Is there any criterion for the allegation of a reflection? The essay examines difficulties involved in these questions.

CHILD, Arthur. The Existential Determination Of Thought. *Ethics* 52,153-185 Ja 42. Thought has been alleged to be determined by any of various extra-mental factors. Three theories of social determination are here examined: Scheler's confused

substitution of psychobiotic for social determination and of indeterminacy for determination; Lukács's sophisticated Marxist treatment in terms of structure; and Grünwald's hypothesis of the emanation of a metaphysical class entity. The problems of the social determinant and the means of determination are then analysed in their own right, and their solution is shown to require the concept of a structure of group attitudes incorporated in the individual mind.

CHILD, Arthur. The Problem Of Imputation In The Sociology Of Knowledge. *Ethics* 51,200-219 Ja 41.

Under the influence of Marxism, ideas are ascribed or imputed to social classes or other groups. Only Lukács, Mannheim, and Grünwald having considered the theoretical justification of this procedure, their theories are here critically examined. All prove to be vitiated by inadequacy to the problem or by internal defects.

CHILD, Arthur. The Problem Of Imputation Resolved. *Ethics* 54,96-109 Ja 44.

Attempts to justify the attribution of ideas to social groups having previously been shown to fail, a more fundamental inquiry is undertaken into the sense in which ideas can be imputed, the nature of what they can be imputed to, and thence the meaning and extent of justifiable imputation. The legitimacy of ideological imputation is granted mainly to ideologically organized groups, only vague attitudes being ascribable to broad social classes.

CHILD, Arthur. The Problem Of Truth In The Sociology Of Knowledge. *Ethics* 58,18-34 O 47.

Social determination of thought raises problems of truth. An examination of Lukács, Scheler, Mannheim, and Grünwald reveals them as: the sense in which the concept of truth can apply to propositions asserting concrete relations between society and thought (treated in the examination); the relationship between genesis and truth (analysed as a pseudoproblem); and the genuine problem of the possibility of a common and objective truth. Various considerations support its factual possibility. The matter is clarified by distinguishing between social feasibility and historical possibility. The theoretical possibility of truth is vindicated through the conception of predispositions as the categorical forms.

CHILD, Arthur. The Social-Historical Relativity Of Esthetic Value. *Phil Rev* 53,1-22 Ja 44.

The relativity of aesthetic value to its social context is considered here. Under the contextual reference of the aesthetic judgment, this relativity is shown to mediate between the errors of absolute universalism and absolute relativism; a contextual meaning is given to the aesthetic 'ought'; and causes of error in making aesthetic judgments with reference to a social context are identified. Under aesthetic experience, the interaction of objective and social-subjective functions is examined in detail. Then the relationship of beauty and taste to social standards is treated, with reference finally to education and to the political context.

CHILD, Arthur. The Sociology Of Perception. *Journal Of Genetic Psychology* 77,293 1950.

Methodological problems arise in connection with the possibility of a sociological study of perception, whether sense perception or perception of meaning. How can one be sure that the subject does perceive what he claims, rather than express the claim on grounds of convention or conventional conviction? The difficulty is brought out by an examination of a discovery by Malinowski among the Trobriand Islanders. The difficulty does not arise in other branches of the sociology of knowledge so far as the object of their study is rather recorded expressions than psychic states.

CHILD, Arthur. The Theoretical Possibility Of The Sociology Of Knowledge. *Ethics* 51,392-418 Jl 41.

The question of the legitimacy of the sociology of knowledge is examined through a critical study of the following theories: Kraft, Ziegler, and Stern, who totally reject its possibility; Plessner and Grünwald, who maintain its impossibility as a science; Scheler and Mannheim, who attempt to prove the social determination of thought; and Szende, who tries to show how the sociological factors actually influence thought. It is concluded that only a social theory of mind, such as Mead's, can adequately ground the interpretation of thought from a social standpoint.

CHILD, Arthur. Thoughts On The Historiology Of Neo-Positivism. *J Phil* 57,665-674 S-O 60.

Covering-law theorists of history divide into nineteenth-century paleo-positivists supposing the course of history subject to general laws verifiable by Mill's inverse deductive method, and recent neo-positivists holding the historian to be rightly satisfied by trivialities. The controversy over the latter school is supplemented by showing that the evidence of history of nature on historical explanation offers neo-positivism no support and that its feebleness is attested by the attitude of the candid neo-positivist to the turning of his position on himself, and by the acceptability to neo-positivism of tautologies in the guise of laws.

CHILD, Arthur. Toward A Functional Definition Of The A Priori. *J Phil* 41,155-159 Mr 44.

C I Lewis's theory of the categories equivocates between the insistence that categories prescribe nothing to experience and the recognition that some categories arise as empirical generalizations. The equivocation is shown to be resolvable by a consistently functional view of the a priori and the a posteriori: it is the attitude taken toward a proposition that makes it analytic or synthetic.

CHILDE, Vere Gordon. *What Is History?* NY Schuman 1953.

CHILDRRESS, James F. *Civil Disobedience And Political Obligation: A Study In Christian Social Ethics.* New Haven Yale Univ Pr 1971.

In a "relatively just constitutional democracy" each person has a *prima facie* obligation to obey the law of the state provided the conditions of fair play prevail. Such obligation enacts the duty of fair play, i.e., acting "fairly in relation to those whose obedience made the structure and benefits possible" in the given civic society. Such obligation can be overridden by other *prima facie* obligations. Consequently

civil disobedience as a deviation from that obligation must be justified by consideration of the cause for civil disobedience, the overriding or cancelling reason, and the forms and consequences of civil disobedience.

CHING, Julia. *To Acquire Wisdom: The Way Of Wang Yang-ming.* NY Columbia Univ Pr 1976.

This book is a comprehensive and intensive analysis of the philosophy of Wang Yang-ming (1472-1529), the Chinese neo-Confucian scholar, soldier and statesman, whose thinking influenced the course of history in both China and Japan. The book gives a short historical introduction, an outline chronology of Wang's life, leading to a discussion of truth and ideology in the context of such schools as Confucianism, Buddhism and Taoism, out of which emerged Wang's original reinterpretation of ancient classical texts. It places some emphasis upon the similarities and differences between Wang's thought and that of the earlier Chu Hsi (1130-1200), considered as the orthodox interpreter of the Confucian tradition. Selected translations from Wang's essays and poems are also given.

CHIPP, Herschel B. Formal And Symbolic Factors In The Art Styles Of Primitive Cultures. *J Aes Art Crit* 19,153-166 Wint 60.

CHISHOLM, Roderick M (ed). *Realism And The Background Of Phenomenology.* Glencoe IL Free Pr Of Glencoe 1960.

CHISHOLM, Roderick M And Others. *Philosophy.* Englewood Cliffs NJ Prentice-Hall 1964.

The volume consists of monographs on five aspects of philosophical work in the United States from 1930 to 1960: philosophical scholarship. All five monographs present analyses of the problems involved and appraisals of representative viewpoints on those problems. The degree of detail in these monographs and the clarity of their categorization of problems and viewpoints combine to make the book a primary guide to America's contribution to philosophy in the second third of the century.

CHISHOLM, Roderick M. *Perceiving: A Philosophical Study.* Ithaca NY Cornell Univ Pr 1957.

Professor Chisholm deals with some philosophical puzzles that arise in our thinking and talking about perceiving. He analyzes our language, proposes new definitions, and constantly draws on the analogy with moral reasoning. Part I, "The Ethics of Belief," defines key epistemic words and relates them to probability and confirmation theory. Part II deals with "Evidence." The criterion of empiricism is too narrow and must be supplemented by "sensible takings." Part III deals with "The Objects of Perception." Here the non-epistemic use of perception words in relation to the epistemic use is discussed.

CHISHOLM, Roderick M. *The Problem Of The Criterion.* Milwaukee Marquette Univ Pr 1973.

CHISHOLM, Roderick M. *The Theory Of Knowledge.* Englewood Cliffs NJ Prentice-Hall 1966.

This book is a short, but able, study of some of the most important issues in the theory of knowledge. Chisholm picks his way through the various senses that can be attributed to such epistemic terms as "appear," "think," "perceive," and "know." He presents several damaging arguments against the sense data theorists and also takes issue with Austin's view that "appear" and "know" function as performative techniques for giving or modifying personal guarantees. Chisholm then proceeds to show that a necessary condition for S to be able to say that he knows that H is true at time t is that H is evident to S at t. And this leads Chisholm to discuss the kinds of conditions under which a proposition can be said to be evident. Finally, since the relations between propositions that are evident and those for which they are evidence are neither of an inductive nor a deductive sort, Chisholm adopts a theory of "critical cognitivism" which deals with how various propositions confer reasonableness or acceptability upon other propositions.

CHISHOLM, Roderick M. "Appear," "Take," And "Evident". *J Phil* 53,722-731 N 56.

CHISHOLM, Roderick M. A Note On Carnap's Meaning Analysis. *Phil Stud* 6,87-88 1955.

CHISHOLM, Roderick M and Sosa, Ernest. On The Logic Of "Intrinsically Better" *Amer Phil Quart* 3,244-249 JI 66.

We present, first, reasons for rejecting certain widely held theses concerning the relations that hold among the concepts: intrinsically good, intrinsically bad,

intrinsically indifferent, and intrinsically better. We then offer a sketch of a logical calculus designed to exhibit the relations that we do believe to hold among these concepts.

CHISHOLM, Roderick M and Symonds, Bernard K. Inference By Complementary Elimination. *J Sym Log* 22,233-236 S 57.

CHISHOLM, Roderick M. Evidence As Justification. *J Phil* 58,739-747 N 61.

This paper considers the possibility that evidence is an ethical concept definable in terms of right or duty and that epistemic justification is a kind of ethical or moral justification. Pursuing two suggestions—Carnap's "principle of total evidence" and Keynes's quickly qualified assertion that "the probable is the hypothesis on which it is rational for us to act," the author works out tentative programs for defining 'evident'. He then proposes a procedure by which to make explicit rules of evidence for empirical statements.

CHISHOLM, Roderick M. Intentionality And The Theory Of Signs. *Phil Stud* 3,56-63 Je 52.

CHISHOLM, Roderick M. Notes On The Awareness Of The Self. *Monist* 49,28-35 Ja 65.

If a man perceives that a cat is on the roof, he perceives a cat. In what sense, then, can it be said of Hume that if he perceives that he finds a perception of heat, he nevertheless does not perceive himself? Only this: that when a man perceives a physical thing to be in a certain condition, he thereby perceives what he knows to be parts of the thing; but when he perceives the self to be in a certain condition, he does not perceive what he knows to be a part of the self. It is contended (i) that certain arguments designed to show that the self is "logically inseparable" from its body are untenable and (ii) that it is a mistake to suppose that if there is a self there may yet be a mean between saying that it is, and saying that it is not, a material object.

CHISHOLM, Roderick M. The Descriptive Element In The Concept Of Action. *J Phil* 61,613-624 O 64.

The concept of an act involves a descriptive component in addition to an ascriptive component. It is proposed that the former may be analyzed in terms of a single primitive, expressible as "He brought about p in the endeavor to bring about p." It is argued that this teleological concept cannot be defined in terms of desire and that the concept of desire has no "logical connection" with that of an act. These considerations are then applied to the following topics among others: the sense in which a given act may be said at one time both to be intentional and not to be intentional; the concepts of "inadvertent success" and "happy failure"; the distinction between motive and reason; and the distinction between saying "He has X as a motive" and "X is his motive."

CHISHOLM, Roderick M. The Ethics Of Requirement. *Amer Phil Quart* 1,147-153 Ap 64.

CHISHOLM, Roderick M. The Logic Of Knowing. *J Phil* 60,773-795 D 63.

This is a critical exposition of Jaakko Hintikka's book *Knowledge And Belief*. The aims are to expound, in relatively simple English, some of the technical features of the book, to note certain results that seem dubious, and to comment on some of Hintikka's philosophical presuppositions. The first part of the paper explains Hintikka's general technique for defending his epistemic principles and evaluates its application to certain traditional philosophical problems. This is followed by a criticism of Hintikka's proof that knowing "virtually implies" knowing that one knows. The final sections raise problems connected with quantification into epistemic contexts and difficulties for Hintikka's solutions to these problems.

CHISHOLM, Roderick M. The Problem Of Empiricism. *J Phil* 45,512-517 S 48.

CHOMSKY, Noam. *Aspects Of The Theory Of Syntax.* Cambridge MA MIT Pr 1965.

This study of generative grammar is aimed at the development of a general syntactical theory which can serve as a universal grammar; previously proposed transformational grammars from the departure point. The main syntactical patterns are to be of the deep structures of a language. These base phrasemarkers are related to the structures of actually spoken sentences by transformation rules. The theory outlined requires a lexicon specifying the peculiar phonological and semantic features of each word and thereby all the irregularities of a given language. A subsidiary goal of the study is to deal satisfactorily with the creative aspect of language, the ability of a competent user to speak and understand new sentences.

CHOMSKY, Noam. *Cartesian Linguistics: A Chapter In The History Of Rationalist Thought.* NY Harper & Row 1966.

This is a study of the linguistics developed and utilized by the Cartesian school, with indications of the relevances of this to the Cartesian philosophical position. One such is the interrelations between linguistics and the Cartesian views on human and animal souls. A second such is the interrelations between linguistics and logic as exhibited, e.g., in the "Port Royal Grammar" by C Lancelot and A Arnauld. The reciprocal influences of philosophical and linguistic views are traced not only through the 17th century but also well into the development of the romantic school, including W von Humboldt. The extent to which Cartesian linguistics approached a generative grammar is noted, as are other ways in which the various views considered have bearing upon contemporary linguistics.

CHORON, Jacques. *Death And Western Thought.* NY Macmillan 1963.

CHORON, Jacques. *Modern Man And Mortality.* NY Macmillan 1964.

Choron is concerned with the problem of "how to cope with the acute awareness of mortality." His book is a survey of what philosophers, psychologists, scientists, and writers have had to say about various aspects of the nature and significance of death. Chapters are devoted to "Biological Theories of Death," "The Problem of Immortality," "The Theory of a 'Death Instinct'," etc. A great many authors, including many Continental thinkers, are quoted and their views summarized, contrasted, and evaluated, though the author reserves his own basic attitude toward death for his Conclusion, where he finds "some measure of reassurance against the nagging doubt of meaninglessness in the implications" of the question "Why is there something rather than nothing?" A comprehensive bibliography of philosophical and psychological writings on death is included.

CHRISTENSEN, Niels E. Further Comments On Two-Valued Logic. *Phil Stud* 8,9-14 1957.

This article goes into some of the problems posed for two-valued logic, proposing that instead of using a three-valued logic we could rework this logic as two-valued. In the case of a term traditionally classified as vague, such as diligent, the author suggests that it might be treated as an ambiguous term, and in the future its two designations might be distinguished by the signs "diligent" and "fairly diligent," both opposed to each other and to "not diligent." He concludes that where in the old language game we had a vague term, we would now have two less vague ones for which we could use our ordinary two-valued logic.

CHRISTENSEN, Niels Egmont. *On The Nature Of Meanings: A Philosophical Analysis.* NY Humanities Pr 1963.

CHRISTENSEN, W N and King-Farlow, John. *Faith And The Life Of Reason.* Boston Reidel 1973.

At least one model of the rational religious believer exists: primary commitment to discovering truth and acting rightly; commitment to a religion flowing from those primary ones; some degree of tentativeness about faith; searching for probability, more than certainty; Faith constituting a partly moral wager aimed at Maximizing Expected Utilities of certain kinds; a tolerant wisdom about commitments (and orderings) partly pleasing to such secular thinkers as Mill, Quine and Popper, also Aquinas, Bartley and William James; primary love for God as the Supreme Justifier of human history—God's power being treated as secondary to his goodness. (Topics include: Miracles, Is and Ought, Probability, Wagers, Proofs, Time, War).

CHRISTIAN, William A. *An Interpretation Of Whitehead's Metaphysics.* New Haven Yale Univ Pr 1959.

This substantial "analytical study" of Whitehead's "speculative philosophy deals with the final period in the development of his ideas." In this period Whitehead aims "at systematic unity, and at rigorous development of a categorical scheme." But "speculative philosophy must [also] offer direct illumination of concrete experience." Therefore, Whitehead must "speak imaginatively as well as logically," and it behooves a reader "to understand both his poetry and his logic without confusing one with the other." The author states why a detailed study of Whitehead is justified, gives "the plan of this study," indicates his own "point of view," and identifies "some [of Whitehead's] important systematic terms." In a brief conclusion the author reminds the reader of his primary concern with questions about meaning in Whitehead, but recognizes that "the question of truth" lies beyond these. Although he has "not argued that Whitehead's system is true or... false," he closes his study with suggestions for "deciding whether what [Whitehead] proposes is true or untrue."

CHRISTIAN, William A. *Meaning And Truth In Religion.* Princeton NJ Princeton Univ Pr 1964.

The author employs the elaborate apparatus of current analytical philosophy on a wide range of material drawn from the world's religions to maintain the old thesis of Euripides: "If gods do evil, then they are not gods." Thus of many careful distinctions the most fundamental is that religious inquiry aims not at establishing the predicates of divinity but at discovering subjects to which such predicates apply. Such terms are the crucial elements in the "basic proposals" of religious discourse; ascriptions of them to divinity are "doctrinal proposals." The author finds the former to be meaningful, and hence capable of use in statements which are true; he is careful not to commit himself to the truth of any specific set of the latter. This is a work in the logic of religious language rather than a philosophical theology of the traditional sort.

CHRISTIAN, William A. Whitehead's Explanation Of The Past. *J Phil* 58,534-535 S 61.

The author discusses two topics: how Whitehead introduces the concept of pastness into his system, and what explanation of the past his principles require him to give. The purpose of the discussion is to raise questions about the way Whitehead's system is constructed and about the way it can be used.

CHROUST, Anton-Hermann (ed). *Aristotle: Protrepticus, A Reconstruction.* Notre Dame Notre Dame Univ Pr 1964.

The author presents the likely content of Aristotle's "lost" *Protrepticus*. The presentation is preceded by an informative introduction in which the author discusses the source of the surviving fragments, the tradition of protreptic speech-writing to which Aristotle himself seems indebted, and reference to the writers of such speeches who flourished at the time Aristotle wrote his own. According to the author, the *Protrepticus* became gradually lost because the discovery of the esoteric writings of Aristotle in the first century BC caused a shift of interest to the dogmatic works of the *Corpus Aristotelicum*. The second part of the Introduction includes (i) testimonia, (ii) collections of the fragments, (iii) sources of reconstruction, and (iv) recommended reading on the subject. Chroust offers his own translation of the 106 fragments; the ones considered to be of doubtful authenticity are enclosed by brackets. The book concludes with a useful commentary on each of the fragments.

CHROUST, Anton-Hermann. Aristotle And The "Philosophies Of The East". *Rev Metaph* 18,572-580 Mr 65.

Citing testimony offered by Diogenes Laertius, Plutarch, and Pliny, the author argues that at least in his early works—the last dialogue *On Philosophy* and the earliest parts of the *Metaphysics*—Aristotle refers to and is perhaps influenced by certain Zoroastrian teachings, namely, the cosmic drama of the perennial struggle between Ahura-Mazda and Ahriman and the doctrine of the great cycle of eternal return. In support of his position he makes note of apparent Eastern influences on earlier Greek philosophers and in the Academy, and he examines Platonic and Aristotelian texts.

CHROUST, Anton-Hermann. Hugo Grotius And The Scholastic Natural Law Tradition. *New Scholas* 17,101-133 Ap 43.

CHROUST, Anton-Hermann. Law: Reason, Legalism, And The Judicial Process. *Ethics* 74,1-18 O 63.

An examination of the nature of the law and of legal reasoning shows that calls for more "legalistic law" and for greater reliance upon law, logic, and reason in judicial process are misplaced. This point of view is fatally unrealistic and does not recognize that the law cannot be a complete, ready-made system containing answers to every possible case, and that all legal devices and classifications must be tentative, experimental, and indeterminate. Formalism in law is a consequence of holding out a false natural-science ideal for law. The law cannot safely maintain a neutral "stand-off" policy in the face of social problems, but must work for the humane resolution of social tension.

- CHROUST, Anton—Hermann.** Plato's Detractors In Antiquity. *Rev Metaph* 16,98–118 S 62.
- Due perhaps to his own mistreatment of others, Plato incurred the vehement and lasting enmity of many of his prominent contemporaries, who variously accused him of plagiarism, malice, pride, ambition, deceit, historical inaccuracies, and sexual perversion, among other things. As a matter of historical record, the author details and assesses these charges.
- CHROUST, Anton—Hermann.** The Origin Of "Metaphysics". *Rev Metaph* 14,601–616 Je 61.
- The term "metaphysics" has long been attributed to an accident: when shelving or listing Aristotelian writings in the first century B. C., the librarian Andronicus of Rhodes was at a loss as to what to do with the then-untitled *Metaphysics*; he resolved the problem by mechanically placing the work after the *Physics*, whence its title. The author of this article marshals evidence from Aristotle's works and the writings of early commentators to disprove this "shelving accident" theory and to establish that the title and the term "metaphysics" arises from the traditional systematic or didactic ordering of Aristotle's writings and reflects his intentions.

- CHURCH, Alonzo** and Goodman, Nelson and Bochenski, I M. *The Problem Of Universals: A Symposium*. Notre Dame IN Notre Dame Univ Pr 1956.
- The three papers brought together here were presented at the Notre Dame Aquinas Symposium, March 9–10, 1956. Alonzo Church's paper is a brief, partly historical, study of various understandings of "Propositions and Sentences." Nelson Goodman gives a well-written exposition and defense of his version of nominalism in "A World of Individuals." Father Bochenski's title essay alone is concerned with "The Problem of Universals"; this he breaks up into several levels and attempts to restate in terms of symbolic logic and with reference to the ontological commitments implied in the various positions.

- CHURCHMAN, C West (ed)** and Ackoff, Russell L (ed) and Wax, Muray (ed). *Measurement Of Consumer Interest*. Philadelphia Univ Of Penn Pr 1947.
- This book is an attempt upon the part of a group of philosophers to put into practice what they have been preaching. It sets out to show that philosophy should immediately undertake an important role in science. It should act as a coordinator of research in the sense that it supplies general criteria for the adequacy of an experimental investigation. The new role of philosophy is that of a critique of experimental techniques; it attempts to define the most general conditions under which a procedure is said to be experimental, a process is said to be in experimental control, a question is said to have meaning.
- CHURCHMAN, C West (ed)** and Ratoosh, Philburn (ed). *Measurement: Definitions And Theories*. NY Wiley 1959.
- CHURCHMAN, C West.** *Prediction And Optimal Decision: Philosophical Issues Of A Science Of Values*. Englewood Cliffs NJ Prentice-Hall 1961.
- This book attacks the view that there is a distinction between what is and what ought to be, or between science and value. The author claims that science itself is a goal-directed activity analogous to decision-making in other fields. He believes that science can aid in the solution of problems of decision, whether individual or social, technological or moral. A science of ethics is possible only if a science of science is possible. A key question is how science justifies its goals. Churchman's discussion ranges all the way from questions of managerial science and probability theory to an analysis of rational behavior and traditional theories of ethics.

- CLARDY, Jesse V.** The Philosophical Ideas Of Alexander Radishchev. NY Astra Books 1964.
- Radishchev initiated the reform movement in Russia with *A Journey from St Petersburg to Moscow* (1790). His specific proposals for law reform were equality before the law, abolition of corporal punishment, and trial by jury. Radishchev believed in God, known by direct feeling, and held that man's goal or virtue is to imitate on earth God's perfect eternal principles, known innately. Radishchev's thought differs in a number of ways from that of French Enlightenment philosophers, who influenced him, and from that of Soviet Communists, who claim him as a precursor.
- CLARE, Theresa.** Morality And Real Relations. *Thomist* 29,396-419 O 65.
- After surveying man as part of a whole and man as a whole of parts, the article defends a relational view of ethics which is compatible with some contemporary humanistic psychologies. The metaphysical basis of this view is that man is necessarily oriented to something other than himself for his own completion; also, man is really and sometimes radically changed by his relations to others. Moral syllogisms are conditional rather than categorical, and right reasoning in moral matters demands openness to and recognition of real and enduring but dynamic and complicated extrinsic and intrinsic relations.
- CLARK JR, Robert T.** Herder: *His Life And Thought*. Berkeley Univ Of Calif Pr 1955.
- This thorough volume contains a history of Herder's times, a brief discussion of the intellectual currents and clashes of the German enlightenment, a complete intellectual biography of Herder, of his place in the German schools of which he was a member, and a full analysis of his writings. Of chief philosophical interest are the chapters on the philosophers who influenced him, his aesthetic doctrine, his philosophy of history, and his attack upon the philosophy of Kant.

- CLARK, Gordon H.** Dewey. Philadelphia Presby & Reformed 1960.
- Dewey's instrumentalist (operationalist) philosophy of science, according to the author, may soon be superseded, as Newtonianism was superseded; Dewey's pragmatic (humanist) solution of the problems of ethics "must, fortunately, be adjudged a failure," and the Deweyan logic, which permits the rejection of the law of contradiction, "is literally nonsense." The first of the three topics (philosophy of science) is treated briefly, on four pages. The second (ethics) is analyzed in terms of values, the worthwhileness of life, political implications, the case of murder, and other topics. The third (logic) is analyzed in terms of Dewey's instrumentalism, his views on behaviorism, and his criticism of alleged flaws in Aristotelian logic.
- CLARK, Gordon H.** Religion, Reason And Revelation. Philadelphia Presby & Reformed 1961.
- The author presents Christianity from the standpoint of Calvinism. He discusses Faith and Reason, rejecting Roman Catholic views and the views of modern philosophy since Descartes and concluding that "revelation is needed as the basis of a rational world-view." Succeeding chapters defend the verbal inspiration of the Bible against contemporary linguistic ideas, an ethics of divine command against utilitarianism and pragmatism and a Calvinist denial of free will against both ancient and recent theological writers.
- CLARK, Gordon H.** Thales To Dewey: A History Of Philosophy. Boston Houghton Mifflin 1957.
- CLARK, Gordon H.** The Philosophy Of Science And Belief In God. Nutley NJ Craig Pr 1964.
- The author argues that the assertion that experience denies the reality of the supernatural world is erroneous. Rather, Clark insists that the Biblical report of creation as reported in Genesis is probably a more reliable scientific account. The "best general philosophy," the author argues, "is the revelational philosophy of Christian Theism."

- CLARK, Henry.** The Ethical Mysticism Of Albert Schweitzer: A Study Of The Sources And Significance Of Schweitzer's Philosophy Of Civilization. Boston Beacon Pr 1962.
- This book is a study of the sources, the purposes, and the meaning of Schweitzer's ethics, in which the author maintains that the conflict between Schweitzer's concepts of civilization and reverence for life is an intentional representation of the tension between necessity and ethics that the moral man must keep alive to himself. Schweitzer's application of his own principles to the problems of atomic tests and colonialism are discussed, and the author offers an evaluation of the ethics. Schweitzer's "The Ethics of Reverence for Life" and "Concluding Statement from *Die Geschichte der Leben-Jesu-Forschung*" are reproduced as appendices.

- CLARK, Mary T.** Augustine, Philosopher Of Freedom; A Study In Comparative Philosophy. NY Desclee 1959.
- An exposition of St Augustine's concept of freedom in the *De Libero Arbitrio*, early dialogues, and *Confessions*. Concepts of freedom in Plato, Aristotle and Plotinus are presented as a background. A close doctrinal study of Augustine's concept (chiefly concerned with his "teaching on free choice in relation to the larger liberty that comes from loving God") is followed by a genetic study (including consideration of Plotinian vs. Ambrosian influences), plus its philosophical implications. Anselm's concept is seen as a continuation of Augustine's; and Thomas "ratifies, develops and metaphysically justifies" it. Certain 20th century views of freedom (including existentialist), among which "the authentic voice of Augustine" is detected, and the author's suggestions of the fruitfulness of the concept for today conclude the book. An index of references to the Augustinian works, plus footnote quotations in the original, are included.

- CLARK, Romane.** On What Is Naturally Necessary. *J Phil* 62,613-624 N 65.
- On familiar interpretations, generalized commonsense conditionals have applications which are trivially true, suffering as they do from the paradoxes of material or strict implication. Some are, when construed in this way, literally false. Such interpretations fail to capture the defeasibility of the commonsense original. It is suggested here that certain of these generalized conditionals be interpreted as expressing relative or dyadic necessities. Of these, the defeasible emerge as statements of dyadic necessity involving iterated modalities in a certain fashion. The motivation for construing such statements in this way lies in the categorical necessity of ascribing a given nature or set of tendencies to a thing relative to categorizing it as a certain kind of thing. By contrast, the necessity of a thing manifesting certain traits relative to its nature or kind is not categorical.

- If the aim of philosophy is clarification through the method of linguistic analysis, then it would seem the aim and method of the philosophy of religion would be the clarification of religious language through an analysis of language used in a religious context—i.e. language insofar as it is related to the religious act of worship. Thus the philosophy of religion would be the bridge between the philosophic activity of clarifying and the religious act of worship. The author discusses this notion by way of attempting to clarify what is involved in linguistic analysis; support is gathered from the remarks of several philosophers, both ancient and modern.

- "It was not the assumption of the editors that each individual essay should apply the exact methodology of Professor Singer to the problem considered. Yet the diversity of the essays does indeed give evidence of the influence and suggestiveness of a systematic philosophy, the principles of which are formulated in the strictest mathematical and logical languages but whose elaboration has required analyses of the realms of art, morality and religion."
- CLARKE, Francis P.** St Thomas On "Universals". *J Phil* 59,720-724 N 62.
- In many handbooks of the history of philosophy one finds as a summary of the problem of universals that the correct view is found in the three-fold statement: (1) universals are *ante rem* in the mind of God, (2) universals are *in re* in that the essence represented in the mind is in each particular, and (3) universals are *post rem* in the (human) intellect. This paper shows that, as far as St Thomas is concerned, (1) and (2) are not true, and (3) can be accepted only in the sense that the essence or the concept representing the universal functions in certain acts of predication.

- CLEVE, Felix M.** *The Philosophy Of Anaxagoras, An Attempt At Reconstruction*. NY King's Crown Pr 1949.
- The author proposes some changes in the recognition of the place usually accorded the philosophy of Anaxagoras. Part I presents Anaxagoras' view of the constituents of the universe. The author's interpretation is at some variance with the traditional view. Part II offers a concise and studied review of Anaxagorean cosmogony. Part III discuss the proposition "There are some in which Nous, too, is contained." Part IV treats of infinity in space and time, and a concluding part estimates Anaxagoras' influence on posterity.

- CLEVELAND, Harlan (ed)** and Laswell, Harold D (ed). *The Ethic Of Power: The Interplay Of Religion, Philosophy And Politics*. NY Harper 1962.
- The papers are concerned with, in the words of the editors, "the judgment of relevance" of religion and ethics to the contemporary fields of government, politics, and administration. Part I examines "the interplay of the great traditions and politics." Part II contains but three papers, actually dealing in the issues of legal philosophy. Part III examines "contemporary societal norms and issues."
- CLIFFORD, Paul R.** Knowledge As Trans-sensational. *Rev Metaph* 17,361-371 Mr 64.
- The author submits that the phenomena of sense experience arise from the interaction of subject and object, and tell us how things work rather than what things are. He further argues that this position has decisive advantages: it grants full weight and genuine significance to scientific theories about reality and to physiological factors in perception, it economically accounts for perspective, hallucination, and dreaming, it corrects undue emphasis on vision, and it avoids the difficulty of distinguishing bodily sensations and sense data without issuing in Berkeleyan idealism. Finally, in this view reality cannot be reduced to the observable.

- COBB JR, John B** and Robinson, James M. *New Frontiers In Theology: Discussions Among German And American Theologians, Vol II, The New Hermeneutic*. NY Harper & Row 1964.
- Bultmann's program of de-mythologizing has led recent German theology to an intensive concern with the question of interpretation ("hermeneutic") of Biblical text, and even to the conclusion that theology is essentially such interpretation. Fuchs (of Marburg) and Ebeling (of Zurich) provide focal essays on this theme. American comments come from Dillenberger, Funk and Wilder. The editors introduce and conclude the discussion.

- COBB, John B** and Robinson, James M. *New Frontiers In Theology: Discussions Among German And American Theologians, Vol I, The Later Heidegger And Theology.* NY Harper & Row 1963.
- This is the initial volume of a new series aimed at effecting more immediate communication between German and American theologians. An introductory essay by Robinson explores recent German discussion of the later Heidegger. Heinrich Ott of Basel provides a focal essay inspired by Heidegger (and, more remotely, by Anselm); the thesis is that theology unfolds faith for the theologian himself and for his brothers in the faith. There are critical comments by three American professors (Come, Micholson and Ogden), a reply by Ott, and a summary by the co-editor.

- COBURN, Robert C.** A Defect In Harrod's Inductive Justification Of Memory. *Phil Stud* 11,81–84 1960.
- The article attempts to expose an alleged flaw in R F Harrod's attempt to solve the problem of memory. Harrod attempts to show that our present memories (or "memory experiences") provide good evidence for believing certain things about the past. Harrod's argument relies significantly on the hypothesis "my present ostensible recollection that I have been hearing a certain sound continuously for the last ten minutes is veridical." The author contends that this hypothesis entails that in all probability the sound will continue for a small period beyond the present instant, and hence its experienced continuation renders highly probable the reliability of this recollection. He challenges this conclusion by giving an hypothesis which includes a different time-span for the sound and which entails that the recollection is delusive.

- COHEN, Jack J.** *The Case For Religious Naturalism: A Philosophy For The Modern Jew.* NY 1958.
- The author seeks to point the way "to a naturalistic reconstruction of the Jewish religion." Naturalism he defines as "the disposition of believe that any phenomenon can be explained by appeal to general laws confirmable either by observation or by inference from observation." Religions and religious beliefs are included in the phenomena so explainable. In the field of values naturalism is the thesis that values are established by man. The "religion in the new key" required by the modern age, while it grants the right of poetic construction to everyone, "refrains from

dogmatizing metaphysical theories." The author's own idea of God is "that quality of the universe expressed in its order and its openness to purpose, which man is constantly discovering and upon which he relies to give meaning to his life." An historical analysis of Judaism is provided. Special attention is paid to Judaism in modern Israel and the United States.

COHEN, L Jonathan. Why Do Cretans Have To Say So Much? *Phil Stud* 12,72–77 1961.

Cohen, in an article published in 1957, argued for a system in which the following statement could be true without generating a "semantical antinomy": "If the policeman testifies that anything which the prisoner deposes is false and the prisoner deposes that something which the policeman testifies is true, then something which the policeman testifies is false and something which the prisoner deposes, is true." A N Prior argues that to prove this statement is to prove a paradox. Cohen responds by distinguishing between semantical antinomy and semantical paradox, arguing that Prior's objection does not bear directly on his position, which has to do only with semantical antinomies.

COHEN, Mendel F. "Is" And "Should": An Unbridged Gap. *Phil Rev* 74,220–228 Ap 65.

In a recent article, "The Gap Between 'Is' and 'Should'" (*Philosophical Review*, Volume 73, pages 165–181), Max Black attempts to bridge the gap between "is" and "should" in terms of a logical relationship between factual premises ("You want to achieve E" and "Doing M is the one and only way to achieve E") and a non-factual conclusion ("Therefore, you should do M"). Black's attempt fails, Cohen argues, because his conclusion is a performative utterance, and no logical entailment exists between factual premises and anyone's speech performance.

COHEN, Morris R. *American Thought: A Critical Sketch* (ed By Felix S Cohen). Glencoe IL Free Pr 1954.

Chapters are supplied dealing with the Background of the American Tradition, American Ideas on History, Scientific Thought, Economic Thought, Political Thought, Legal Thought, Religious Thought, Aesthetics, and (longest of all) General Philosophy. As expected, the two Cohens excel in their treatment of legal philosophy, but the chapter on another primary interest of the elder philosopher, scientific thought, is surprisingly brief. Few individual philosophers before the twentieth century receive much attention; and the allotments of space are such that about half the pages in the "General Philosophy" chapter go to Peirce, James, Royce, and Dewey.

COKE, Wilson. *Music And Meaning: A Theoretical Introduction To Musical Aesthetics*. NY Free Pr 1972.

The author develops the meaning of music by using as a model a general theory of signs and the concept of music as gesture. He describes his approach as a semiotic-gestural theory of music. In keeping with a semiotic theory, meaning is determined first by considering the most elementary elements of music, i.e., its surface qualities such as sound, loudness, pitch, rhythm, etc. Then these are combined in musical gestures or musical syntax, which consists of the "arrangement, according to principles or rules, of elements in sonorous motion." Finally, the semantic aspects are specified as being congeneric or extragenic meaning. Through extragenic meaning the author indicates that musical gestures signify life values and the activities of inorganic objects.

COLE, J Preston. *The Problematic Self In Kierkegaard And Freud*. New Haven Yale Univ Pr 1971.

COLE, Richard. On The Possible Impossibility Of Metaphysics. *Phil Stud* 14,43–48 1963.

According to N R Hanson, metaphysicians, because they intend their conclusions to be informative, must argue from necessary premises to contingent conclusions. Hanson, employing Lewis' system of logic, states that it can be proved that no such arguments are valid. The author takes issue with Hanson, arguing that Lewis' system is not serviceable for several different sorts of necessity. He concludes that Hanson's appeal to modal logic is unsuccessful in demonstrating the impossibility of metaphysics.

COLE, Richard. Ptolemy And Copernicus. *Phil Rev* 71,476–482 O 62.

Cole holds that several philosophers have mistakenly thought that the only reason the Copernican world system replaced the Ptolemaic was that the Copernican system was simpler. Actually much more is involved—appeals to facts of observation and physics were considered relevant and still are.

COLE, Stewart G (ed). *This Is My Faith: The Convictions Of Representative Americans Today*. NY Harper 1956.

The twenty-five contributors to this volume were asked five questions dealing with the relationships of science and religion, of religion and morals, and the usefulness of the concept of God. The answers divide sharply into theists and humanists, with the theists further divided concerning "the nature of ultimate spiritual reality and the manner of its communication with man."

COLEBURN, Russell. *The Search For Values*. NY Sheed & Ward 1960.

COLEMAN, Don. Cognition And The Will. *J Phil* 61,155–157 F 64.

COLEMAN, Francis J. A Phenomenology Of Aesthetic Reasoning. *J Aes Art Crit* 25,197–204 Wint 66.

COLEMAN, Francis J. Can A Smell Or A Taste Or A Touch Be Beautiful? *Amer Phil Quart* 2,319–324 O 65.

At the risk of eccentricity, I have argued that the sensations of taste, smell, and touch can be beautiful, and that the beauty of some experiences would be diminished if reference to them were omitted. I considered the chief arguments against this thesis: such sensations cannot be beautiful because (1) they are not spoken of that way; (2) they are simple data; (3) they cannot be combined to form unities; (4) they only give

pleasure; (5) they cannot have internal relations; (6) they are utilitarian; (7) they vary greatly in appeal; (8) they are the "lower senses." My arguments for the thesis are: (1) that the blind do not infer but directly experience the beauty of, e.g., the Elgin Marbles; (2) that the analysis of some expressions, e.g., "a beautiful dinner," entail reference to the "lower senses"; (3) that our experience of some objects of art is as unintellectual and sensuous as our experience of a rare odor; (4) that certain beautiful experiences involve all the senses; (5) that some persons refer to these senses when giving reasons for aesthetic judgments.

COLEMAN, Francis J. Liking And Approving Of A Work Of Art. *Rev Metaph* 17,568-576 Je 64.

The author argues that the chief ways of marking the difference between liking and approving of a work of art are inadequate. In support of his position, he critically examines four explanations commonly invoked, including Kant's distinction between the gratifying and the pleasing, and the theory that whereas likes are inexplicable approval can be reasoned about and explained. Finding these accounts deficient, the author suggests that when criticism centers on the speaker's personal response to a work of art it expresses liking or disliking; when it centers on the work itself, it expresses approval or disapproval.

COLEMAN, Francis X J. *The Aesthetic Thought Of The French Enlightenment.* Pittsburgh Pittsburgh Univ Pr 1971.

The author admits that the writings of the French aestheticians of the first two-thirds of the eighteenth century are not the works of systematic thinkers but with the use of a distinction he makes between critical and aesthetic theories he is able to discern what belongs to aesthetic theory in the writings of Crousaz, Dubos, Trublet, Marivaux, Batteux, André, Voltaire, D'Alembert, Montesquieu, Diderot et al. Assumptions, tacit or overt, lurking in the background of the intellectual scene are uncovered, explained and the theses they support are interpreted and evaluated. The dualistic tensions characteristic of the arts of the period are shown to be reflected in the writings of the aestheticians. The major themes treated in this book are organized around the tensions discussed in the four chapters titled 'Reason and Sentiment', 'Rules and Spontaneity', 'Imitation and Creation' and 'Art, Language and Morality'.

COLEMAN, Francis X J. *The Harmony Of Reason: A Study In Kant's Aesthetics.* Pittsburgh Pittsburgh Univ Pr 1974.

The author concerns himself with Kant's own arguments and statements on aesthetics and restates them in analytic terms familiar to contemporary philosophers. This study draws upon Kant's other writings, both in aesthetics and other areas of philosophy to aid in interpreting Kant's aesthetics whenever those writings will illuminate the understanding of the text. This methodology places Kant's philosophy of art in the wider context of his critical philosophy. The author demonstrates that though form plays an important role in Kant's theory, it is nevertheless a mistake to describe his aesthetics as "formalistic."

COLLIER, David S and Mc Govern, William Montgomery. *Radicals And Conservatives.* Chicago Regnery 1958.

Liberalism is defined as the advocating of democracy rather than authoritarianism and individualism rather than statism. Within the liberal tradition are both radicals (Bentham, Jefferson, Jackson) and conservatives (Montesquieu, Burke, John Adams). Although the radicals were correct on some matters, the authors hold that the conservatives were more often right. Their book is intended to "provide at least the beginnings of a coherent philosophy of conservative liberalism." This task has great practical importance, according to the authors, for the success of the anti-collectivist movement depends upon the development of a conservative philosophy. In outlining their views, relatively brief and elementary discussions are given on the nature of man and the world, on the ethical foundations of their theory, on the ideal form of government, and on the aim and scope of the state.

COLLIER, Rex M and Lawrence, Helen Palmer. The Adolescent Feeling Of Psychological Isolation. *Educ Theor* 1,106-115 Ag 51.

COLLINGWOOD, Francis J. *Man's Physical And Spiritual Nature.* NY 1963.

This book is an analysis of the status of man as a natural being and as a spiritual being, following the philosophy of St Thomas Aquinas except for being updated to include modern scientific knowledge of the body as a replacement for medieval physics. The science is sound and informative though elementary, and the language of substance, form, accident, and nature does not seriously distort its exposition. The standard philosophic explanations for this position are clearly given, although no detailed analysis of other philosophic positions is attempted.

COLLINGWOOD, Francis J. *Philosophy Of Nature.* Englewood Cliffs NJ Prentice-Hall 1961.

COLLINGWOOD, Francis J. Intelligible Matter In Contemporary Science. *Proc Cath Phil Ass* 38,109-118 1964.

COLLINGWOOD, R G. *Essays In The Philosophy Of Art,* Alan Donagan (ed). Bloomington Indiana Univ Pr 1964.

COLLINGWOOD, R G. *Faith And Reason: Essays In The Philosophy Of Religion.* Chicago Quadrangle Books 1968.

This is a collection of essays covering Collingwood's writing on religion from 1916 to 1929. It is divided into four parts: Religion as Reason, Religion as a Scale of Forms, Religion as Philosophical Anthropology, Religion and Absolute Spirit. Collingwood's attempt to separate religion from the charge of irrationalism and demonstrate its necessity, is one of his significant contributions.

COLLINGWOOD, R G. *The Idea Of History.* NY Oxford Univ Pr 1956.

COLLINGWOOD, R G. *The Idea Of Nature.* NY Oxford Univ Pr 1960.

COLLINS, Arthur W and Bennett, Daniel C. Jonathan Bennett On Rationality: Two Reviews. *J Phil* 63,253-266 My 66.

Rationality can be investigated, first, via the contrast: rational-irrational and, second, via the contrast: rational-nonrational. Bennett's account suffers because he adopts the second approach exclusively. To bridge the rational-nonrational gap conceptually, he starts from the "language of the bees" and tries to construct rational bees through a series of improved imaginary species. Mistakenly supposing that we understand what real bees do and using causal explanations and stimulus response patterns, he tries to confer on them some power that will not be explicable in these terms. This leads to unpalatable doctrines on "evidence" and on the relationships between sensory states and the causes and meanings of utterances.

COLLINS, Clinton. Equality, Justice, And Desegregation. *Proc Phil Educ* 21,101-106 Ap 65.

COLLINS, George E. Distributivity And An Axiom Of Choice. *J Sym Log* 19,275-277 D 54.

COLLINS, James D. *Interpreting Modern Philosophy.* Princeton NJ Princeton Univ Pr 1972.

This is a study of the interplay between classical modern philosophers and twentieth-century historians. The method of functional reflection shows that the reality of interpretation is codetermined by the insistent sources themselves, the basic historical questions, the needs of our interpreting present, and the unification of all these factors by the philosophical investigator. Source philosophers interrogate each other; historians develop and modify their frameworks; and a new philosophical climate leads to revisions and fresh emphases.

COLLINS, James D. *The Lure Of Wisdom.* Milwaukee Marquette Univ Pr 1962.

The theme of wisdom has a strong modern development, some phases of which are traced here. Renaissance Stoics and skeptics agree upon a practical wisdom, sometimes joined with religious faith. The main analysis is of the several meanings of wisdom in Descartes, who combines its speculative and practical aspects in a synthesis distinct from, but open to, religious wisdom. Contributions of Dewey and Eastern thinkers have to be weighed through the method of metaphysical ingression and integration.

COLLINS, James Daniel. *God In Modern Philosophy.* Chicago Regnery 1959.

This book concentrates upon the God-problem from Cusanus to Whitehead. Renaissance thought polarizes around Bruno's metaphysics and the skeptical criticism of knowledge of God. Whereas the rationalists assign a positive function to God, the empiricists tend to neutralize God's role in philosophy. Kant's moral theism contrasts with Hegel's assimilation of God to the metaphysical absolute. The atheism of Feuerbach and Marx is countered by theories of a finite processive deity. A realistic philosophy of God takes into account the many modern problems.

COLLINS, James Daniel. *The British Empiricists: Locke, Berkeley, Hume.* Milwaukee Bruce 1967.

Locke, Berkeley, and Hume are open to many continental influences but also discuss a common set of problems. Each thinker offers his own account of how sense-perception limits rational inference and constitutes the human mode of experience. Analysis of relations among our ideas results in their differing accounts of substance and self, power and causality, God and moral living. Some political and religious consequences are also noticed.

COLLINS, James Daniel. *The Existentialists, A Critical Study.* Chicago Regnery 1952.

The background for existentialism is found in Kierkegaard, Nietzsche, and Husserl. Individual chapters consider Sartre on atheism and freedom, Jaspers on situation and transcendence, Marcel's distinction between being and having, and Heidegger's view of being, man, and God. Five themes common to the existentialists are: active philosophizing, descriptive metaphysics, our being in the world, man's social relations, and his attitudes toward God.

COLLINS, James Daniel. *The Mind Of Kierkegaard.* Chicago Regnery 1953.

Kierkegaard's life and early thoughts are genetically described in this book. Then his use of pseudonyms is related to the three spheres of existence. The esthetic and the ethical spheres contain distinctive values and arouse specific difficulties. These lead Kierkegaard to use and criticize Hegelianism, as well as to emphasize the existing individual's relation to truth and religious transcendence. Two basic problems are the individual-and-community tension, and that between established religion and personal religions existing.

COLLINS, James D. Christian Philosophers And The Modern Turn. *Proc Cath Phil Ass* 39,14-37 1965.

Four traits mark the Christian thinker's study of modern philosophy. First, there is a decapsulating effect of entering a wider intellectual universe, with its liberating enlargement of view. Next comes acceptance of the ideal of unrestricted inquiry about all of one's philosophic convictions. The third effect is a strengthening of one's sense of professional integrity. Finally, the many descriptions of experience challenge one to draw inferences about man and God.

COLLINS, James. *A History Of Modern European Philosophy.* Milwaukee Bruce 1954. In this book background chapters treat the Renaissance, the rise of modern science, and Hobbes' extension of mechanism to society. Next, the similarities and differences

among seventeenth-century rationalists are examined. Then Locke, Berkeley, and Hume are analyzed in terms of method and major substantive issues. Two chapters deal respectively with Kant's theory of knowledge and his ethical and esthetic views. The nineteenth-century polarizes around Hegel and German idealism, Mill and positivism, and the philosophers of life (Schopenhauer, Nietzsche, and Bergson).

COLLINS, James. *The Emergence Of Philosophy Of Religion.* New Haven Yale Univ Pr 1967.

The question concerns the rapid rise of philosophy of religion as a distinct discipline. Its emergence is due to Hume, Kant, and Hegel. Hume naturalizes religious belief and restricts man to a minimal theism, but without moral impact. Kant explores the moral roots of religious belief, which fits into his theory of cognition but arouses questions on evil, history, and ecclesial forms. Hegel incorporates religion into his phenomenology and logico-metaphysics, as long as the ultimate interpretation is philosophical. Two final chapters identify the common historical issues and outline a realistic philosophy of religion.

COLLINS, James. *The Thomistic Philosophy Of The Angels.* Washington DC 1947.

To treat of angels philosophically St. Thomas uses his ordinary conceptual tools. Knowledge of their existence depends on the grades of things and intellectual powers. Angelic nature is analyzed in terms of matter and form, essence and existence, act and potency. Angelic knowing and willing involve the relation between power, operation, and object. The angelic type of duration is reducible to neither human temporality nor divine eternity.

COLLINS, James. *Three Paths In Philosophy.* Chicago Regnery 1962.

Pluralism in recent philosophy need not lead to anarchy of thought. Three centers of unity are focal: existentialism and phenomenology, naturalism, and theistic realism. Existential views of science, art, and religion are brought to the fore. Different modes of naturalism are represented by Marx, Darwin, and Dewey. Among the problems facing theistic realism are: the meanings of a perennial philosophy, the analytic way of talking about God, and the yield of Husserl to the theory of being.

COLLINS, James. "Developing Patterns In Philosophy" in *Knowledge And The Future Of Man*, Walter J Ong (ed), 215-244. NY .1968.

The impact of current philosophy upon mankind's course is seen in three perspectives. First, there is increasing awareness of history and of the need to increase historical work in all fields. Second, the widespread trend toward philosophies of this-and-that reinforces specialization in other areas and, in turn, profits from special field work. Third, pluralism is counterbalanced by a search for unification of knowledges, symbolized in philosophy by the convergence between analytic and phenomenological methods.

COLLINS, James. "God And Contemporary Philosophy" in *God, Jesus, Spirit*, Daniel Callahan (ed), 75-88. NY Herder & Herder 1969.

There is interaction between faith and philosophy in America today. Three pivotal problems are: atheism as a human problem, the elucidation of God-talk, and creative divine purpose in an evolving world. Instead of choosing between analytic and phenomenological means of handling these issues, both methods have to be used and adapted to our pervading sense of evolving nature.

COLLINS, James. "Jaspers On Science And Philosophy" in *The Philosophy Of Karl Jaspers*, Paul A Schilpp (ed), 115-140. NY Tudor 1957.

Contrary to the opinion that existentialists ignore or reject modern science, Jaspers analyzes it in detail and relates it to his philosophy. Indeed, without being one of the sciences, philosophy shares in the scientific spirit of questioning and remaining open to new situations. Yet philosophy also stresses the personal existent and the sphere of freedom, so that the act of awareness is not restricted to scientific knowledge of objects in the world. Science and philosophy together enliven our sense of analogy and limits.

COLLINS, James. "John Henry Newman" in *The Encyclopedia Of Philosophy*, Paul Edwards (ed), 480-485. NY Macmillan 1967.

In his philosophical defense of theism, Newman moved away from rationalistic and design arguments toward a more concrete and personal mode of inference, or informal reasoning. The illative sense manifests itself when the mind does its own weighing of reasons and judging about their import. Concerning matters of fact, Newman distinguished probable inference from certitudinal real assent. The religious response to God arises from reflection upon one's moral life and conscience, not from arguments about design in nature.

COLLINS, James. "Josiah Royce: Analyst Of Religion As Community" in *American Philosophy And The Future*, Michael Novak (ed), 193-218. NY Scribners 1968.

There is a thread of philosophical examination of religion running throughout Royce's writings. Its unifying culmination comes in his mature books, *The Problem of Christianity* and *The Sources of Religious Insight*. Here, he incorporates the concepts of fallibilism and evil, loyalty and interpretation, into the primary theme of the religious community. The sociality of religious experience is used to interpret the main Christian beliefs and to give them philosophic significance.

COLLINS, James. "Leo XIII And The Philosophical Approach To Modernity" in *Leo XIII And The Modern World*, Edward T Gargan (ed), 181-209. NY Sheed & Ward 1961.

The encyclical *Aeterni Patris* (1879) of Pope Leo XIII recommends not solely a return to past thinkers but also a rethinking of older sources in modern terms. It stresses the personal act of philosophizing and its correlation with other modern disciplines. Leo insists on a careful study of modern philosophers, a restraint of the contentious spirit, and the need for methodologies adapted to the rapid growth of knowledge in all fields.

COLLINS, James. "Newman And Philosophy" in *Philosophical Readings In Cardinal Newman*, James Collins (ed), 1-33. Chicago Regnery 1961.

Newman's philosophical formation was based not upon medieval sources but upon the Alexandrine Fathers and British writers (especially Bacon and Locke, Butler and Whately). He kept abreast of mathematical and scientific research, whose synthesis

with religion he supported with Boyle rather than rejected with Hume. He described his path as "that minute, continuous, experimental reasoning, which shows baldly on paper, but which drifts silently into an overwhelming cumulus of proof."

COLLINS, James. "Scheler's Transition From Catholicism To Pantheism" in *Philosophical Studies*, John K Ryan (ed), 179-207. Westminster MD Newman Pr 1952.

Max Scheler's move from a theistic to a pantheistic notion of God was not due mainly to psychological reasons but to his phenomenological essentialism. In contrast to science, philosophy can move toward the absolute and the essential order through an upsurge or love-determined act of the human person. Eventually, Scheler interpreted the human upsurge as a participation in God's own self-making, with man as the integration of divine life and mind.

COLLINS, James. "The Genesis Of Dewey's Naturalism" in *John Dewey: His Thought And Influence*, John Blewett (ed), 1-32. NY Fordham Univ Pr 1960.

Dewey's philosophical development is traced through his successive views of nature. His early writings concede that idealism must be modified to meet evolutionary findings in human biology and psychology. Man's interdependence with evolving nature demands a philosophical method that is genetic and temporalistic in treating the moral values and social forms developed by men. Darwin helped Dewey to remove any transcendent-eternal reference of human action, as well as any dualistic contrast between man and the rest of nature.

COLLINS, James. A Congress On Existentialism. *Mod Sch* 25,34-38 N 47.

COLLINS, James. A Quarter-Century Of American Philosophy. *New Scholas* 25,46-80 Ja 51.

During the years 1925-1950, idealism continued to ask about the nature of person and whether a personal God must be finite and developmental. From opposite standpoints, logical empiricism and phenomenology started to exert influence on the interpretation of man and of traditional philosophical problems. Publication of the writings of Peirce and Mead affected the history of pragmatism and Dewey's naturalism, by adding new reflections on the scientific community, social agency, and religion.

COLLINS, James. An Approach To Karl Jaspers. *Thought* 20,657-691 D 45.

Philosophy of culture profits from Jaspers' concept of situational existence, the limit-situations of human existence, and the smothering of values under mass pressure. Human existence depends on the empirical and technological world, uses reason to attain maximum communication, and freely seeks to relate itself to transcendence. Jaspers' reading of the ciphers of transcendence requires a complement in the analogy of being, which gives some grasp of God.

COLLINS, James. Analytic Theism And Demonstrative Inference. *Int Phil Quart* 1,235-263 My 61.

Analytic philosophy of God and religion retains some vestiges of logical positivism concerning the model and limits of human cognition. There is careful analysis of the meaning of religious language, along with refusal to infer God's existence as a demonstrated truth. But constructive efforts are made to show the falsifiability of God talk and its appropriate address in causal stories pointing toward God.

COLLINS, James and Neill, Thomas P. *Communism: Why It Is And How It Works.* NY Sheed & Ward 1964.

Chapters 8-13 make a comparative study of the philosophies of Marx and Hegel. Each has a distinctive method and philosophy, responsive to the needs of his age but not simply reducible to a cultural reflex. Marx finds Hegel useful, insofar as the latter takes a contextual and historical approach. But Marx criticizes ideologies and presents a methodology for social revolution.

COLLINS, James. Aristotle's Philosophy Of Art And The Beautiful. *New Scholas* 16,257-284 Jl 42.

In this article, Aristotle firmly locates art as a practical-intellectual virtue of making. It governs our acts of providing forms from the mind, and for contingent materials that already have a natural form. Whereas the useful arts compensate for the deficiencies of nature in meeting human needs, the imitative arts operate selectively to pervade the materials with significant, likely, and pleasing patterns. Although he does not explicitly link art and beauty, Aristotle does regard art as a splendid embodiment of order, determinateness, and human striving.

COLLINS, James. Art And The Philosopher. *Univ Of Houston Forum* 1,26-30 Sum 57.

Existentialists pay unusual attention to the arts, not just in the specialized discipline of esthetics but also in basic interpretation of existence and communication of philosophical principles. Like Kierkegaard and Nietzsche, most existentialist philosophers use poetry and drama and novel to convey their views on life's dark side, its jagged edges, and its tension between futility and hope. Art illuminates our concrete situations and moods, our sense of isolation and of community.

COLLINS, James. Bertrand Russell's A History Of Western Philosophy: Book Two, Catholic Philosophy. *Fran Stud* 7,193-218 Je 47.

Russell's *History of Western Philosophy* is specially handicapped in the medieval section, for lack of a direct and balanced study of the sources. It does not admit the presence of philosophy proper in the medieval thinkers, since they dealt with issues in metaphysics and ethics which are relegated by Russell to theology. The different humanisms of Augustine, Boethius, and Saint Thomas elude such treatment, because they are more complex than they are represented to be.

COLLINS, James. Catholic Estimates Of Scheler's Catholic Period. *Thought* 19,671-704 D 44.

COLLINS, James. Contemporary Theories Of Man. *Thomist* 12,17-47 Ja 49.

Marxism, naturalism and existentialism see the need for philosophical anthropology. Marx profited from Feuerbach's vindication of the concrete human being, but added the dimension of revolutionary transformation of society. Dewey accepted Bacon's close knitting of man and nature, while closing any rifts among the values and aspirations in evolving society. Sartre took a lucid atheism as his first premise, judged

man's search after God as self-destructive, and was left with the dilemma that social existence is either futile or to be dialectically interpreted.

COLLINS, James. Darwin's Impact On Philosophy. *Thought* 34,185-248 Je 59.

Darwin undermined Paley's design argument and strengthened the agnosticism of Huxley and Spencer. The role of change and complex nonfinalized forces in evolution challenged the notion of inevitable human progress. In America, Wright and Peirce reformulated scientific method so as to make philosophy responsive to a community of inquiry that is always corrigible and interconnected. Bergson and Teilhard interpreted evolution in terms of freedom, new values, and convergence on God.

COLLINS, James. Edith Stein And The Advance Of Phenomenology. *Thought* 17,685-708 D 42.

As an early assistant to Husserl, Stein used the theory of empathy to reach the intersubjective community of selves. Without employing a transcendental reduction, she made a phenomenological defense of personal freedom against Hume, as well as an analysis of the individual's intention to share in the life of the community. Stein regarded the state apart from the racist mystique of a people, and specified that the genuine state exercises restraint without loss of its integrity.

COLLINS, James. Faith And Reflection In Kierkegaard. *Journal Of Religion* 37,10-19 Ja 57.

Instead of the usual contrast between faith and reason, Kierkegaard proposed a polarity between faith and reflection. He found analogous acts of believing and reflecting in both the esthetic and the ethical stages of existence. Where he did find conflict was between faith and Hegelian philosophy, for pure thought would ingest faith. After one makes the leap of faith to Christian religiousness, however, some nonimperialist sort of reflection remains to explore and apply faith to our existence.

COLLINS, James. For Self-Examination Of Neoscholastics. *Mod Sch* 21,225-234 My 44.

This programmatic statement recommends a study of the Renaissance transition from medieval to modern philosophy, as well as a more historically precise and sympathetic reading of major modern philosophers. Pluralism of schools among modern schoolmen is both historically justified and healthy for philosophical developments today. There should also be recognition of Christian philosophers who are not Neoscholastics and who have assimilated contemporary advances.

COLLINS, James. Gabriel Marcel And The Mystery Of Being. *Thought* 18,665-693 D 43.

A key distinction is between problem and mystery, the former permitting us to remain at a spectator's or a manipulator's distance and the latter invading our personal disposition of freedom. Marcel evokes a sense of mystery through the medium of drama, where persons concretely manifest their commitment and their fidelity under pressure. Participation in being is a response that makes us accessible to others, rather than dominant over them as our tools of policy and ownership (the realm of having).

COLLINS, James. God And Contemporary Philosophy. *Commonweal* 85,528-534 10 F 57.

A valid interval is interposed between a believer's testimony and any claims about its philosophical significance and usefulness. Similarly, a profession of atheism has to be analyzed for the meaning of God under attack and the positive needs of human nature being thus indirectly expressed. Analytic, phenomenological, and evolutionary reconstructions of theism are descriptively helpful, but they do not yet come to grips with the manner and basis of making inferences about God.

COLLINS, James. God As A Function In Modern Systems Of Philosophy. *Proc Cath Phil Ass* 28,1-16 1954.

Spinoza functionalizes God by making the idea of him the starting point for the best method in philosophy. Kant moves from existence to our knowledge of existence, and criticizes all speculative arguments since they would reduce God to a phenomenal existent. Hegel's functionalism comes from regarding God as the representative understanding's way of viewing the rational Absolute.

COLLINS, James. History In The Service Of Metaphysics. *Rev Metaph* 2,105-125 Je 49.

Gilson thematizes being and essence to show that Aristotle is needed along with Plato, and that Saint Thomas critically rethinks the meaning of being so as to escape from pure essentialism and conceptualism. The act of existing is irreducible to form and substance. An existentialist awareness is present in Kant, but Gilson leaves unspecified the British empiricist treatment of existence.

COLLINS, James. Interpretation: The Interweave Of Problems. *New Literary History* 4,389-403 Wint 73.

Dilthey's view of understanding helps both philosophers and literary critics to become reflective about the act of interpreting. This act helps us to comprehend and communicate various types of experience and their expressions, thus constituting a way of becoming human in our world. To lose our hold upon interpreting would not mean a peripheral loss but a cessation of our basic ability to think and act, a breakup of the human community as a mutual process of interpretation.

COLLINS, James. Kant's *Opus Postumum*. *New Scholas* 17,251-285 Jl 43.

Kant's final manuscripts continued his lifelong effort to criticize and improve upon his own teachings. A major problem was to rethink the transition back and forth between the determined order of nature and the freedom of moral life. This led Kant to a fresh deduction of the categories through self-affecting, a new view of matter, and a metaphysical refounding of science. Correlatively, it gave new prominence to the postulate of God, whose meaning as a practical ideal is closely related to that of the demanding ethical ideal in man.

COLLINS, James. Karl Jaspers' Philosophical Logic. *New Scholas* 23,414-420 O 49.

The first volume of Jaspers' philosophical logic is on truth. His notion of logic is as broad as human existence, and his general treatment of truth concerns the relation

between human understanding, communication, and the ways of being. There is room here for philosophical faith as a basic impetus toward investigating the world by means of reason, thus providing an existential logic of man and his limits.

COLLINS, James. Kierkegaard And Christian Philosophy. *Thomist* 14,441-465 O 51.

COLLINS, James. Kierkegaard's Critique Of Hegel. *Thought* 18,74-100 Mr 43.

Kierkegaard's move away from the esthetic sphere gets prolonged into a move away from the purely speculative system of the Hegelians. Hence he emphasizes the existing individual, discontinuity, and personal ethical choice. Religious faith never gets subsumed into, and reinterpreted by, philosophical principles of the Absolute but remains a person-to-person relation with God.

COLLINS, James. Kierkegaard's Divine Unrest. *Journal Of Arts And Letters* 3,68-82 Spr 51.

Kierkegaard's restless probing of the meaning of existence constitutes a life in four acts. First comes his relation of sympathy and antipathy with his own father, who stands for God's grace and for self-torment. Then Kierkegaard is educated by Regine Olsen, who aroused his sense of lacking confidence in God's power over earthly relations and also his awareness of having a separate religious vocation. The third and fourth acts get played out in his increasingly public and polemic involvement against the press, the crowd, and the religious establishment. The tug of diverse ideals and the personal relation with God characterize his life and thought.

COLLINS, James. Louis Lavelle On Human Participation. *Phil Rev* 56,156-183 Mr 47.

The French spiritual philosopher, Lavelle, is fascinated by man's ways of sharing in being, or the eternal present. He has a more active conception of being than is found in the idealist and empiricist notions of the object of cognition. There are two centers of autonomy, the divine and the human, with the latter exercising a created creativity which is nonetheless active for being participative. Lavelle's totality of being is a community among free and generous agents.

COLLINS, James. Marxism And Secular Humanism. *Social Order* 3,207-232 My-Je 53.

In his early manuscripts, Marx develops a humanism that is antitheistic and opposed to religious alienation. On the positive side, he offers a naturalism based upon social work and reconciliation between man and nature. Human reality gets realized in social man acting in the world. Dewey's experiential humanism combats dualisms, reconstructs thought and society in accord with evolutionary science, and appeals to social adequacy rather than to an inherent dialectic of history.

COLLINS, James. Mr Lewis And The A Priori. *J Phil* 45,561-571 O 48.

In analyzing knowledge and valuation, Lewis grants that analytic statements are knowable *a priori*. But in sense presentations, he requires the apprehending act to take into account the nature of the objective situation. And even analytic truths involve a selection of sense meanings which promise broad, important use in the speculative and practical knowledge of experience. Thus there is a pragmatic evaluation incorporated into the Lewis sort of *a priori*.

COLLINS, James. Olgati's Conception Of Modern Philosophy. *Thought* 18,478-504 S 43.

Olgati seeks the core intuition of a philosopher and relates it to other basic modern perspectives. Berkeley's immaterialism is an effort to recover the concreteness of being, personal and freely active substance, and teleology for man. A main task for metaphysics now is to heal the split between the phenomenalist theory of being as object and the idealist theory of being as subject. They can be incorporated into a realistic metaphysics that moves beyond the Cartesian dualism of mechanism and consciousness.

COLLINS, James. Philosophic Problems, 1955. *Thought* 31,114-140 Mr 56.

COLLINS, James. Philosophical Discussion In The United States: 1945. *Mod Sch* 24,61-84 Ja 47.

Major topics concern the Nietzsche centenary (his values are more than biological but perhaps do not supersede Christian ones) and the pros and cons aroused by the Krikkorian volume on naturalism, in relation to specifically human goals. Chauncey Wright and Charles Peirce are at last being given their due as evolutionary thinkers.

COLLINS, James. Philosophical Themes In G M Hopkins. *Thought* 22,67-106 Mr 47.

Hopkins felt that philosophical reflections kept his faith and poetry in mutual communication. In all three areas, there is a rightful demand for precision and concision of thought and expression. In Aristotle the moralist and Duns Scotus the metaphysician, Hopkins found a high evaluation of the individual joined with an effort to relate individual traits to the wider community of persons. His poetry reflects a constant pull between the assertiveness of things and that of the perceptive mind.

COLLINS, James. Philosophy In Catholic Life. *Religion In Life* 29,179-188 Spr 60.

Four strands in the complex role of philosophy in a Catholic context are inspected. First, there is institutional interest as shown in encyclicals on Christian philosophy and the university curriculum's stress on philosophy courses. Second, Thomism is a cover term for sharp differences about the relations between metaphysics and philosophy of nature, ethics and religious aims. Third, the double impact of Gilson and Maritain stimulates interest in history of philosophy and modern cultural issues. Fourth, new and powerful trends open toward phenomenology and existentialism, analytic and scientific methodologies.

COLLINS, James. Philosophy Of Existence And Positive Religion. *Mod Sch* 23,82-100 Ja 46.

Karl Jaspers develops the religious implications of his view that human existence must be present in the world and yet must also remain unenclosed and related to the encompassing other. His metaphysics studies our orientation to transcendence, our experience of limit-situations, and our response to suffering, hope, and death. Jaspers distinguishes philosophy from religion, since philosophical faith remains within human limits whereas religion depends upon positive revelation from the transcendent God and upon particularized teachings and cults.

COLLINS, James. Progress And Problems In The Reassessment Of Boethius. *Mod Sch* 23,1-23 N 45.

Boethius' plan to synthesize Plato and Aristotle was a master theme running throughout his writings. His commentaries on Aristotle and Porphyry helped to stabilize Latin logical and metaphysical terminology, just as his treatises on mathematics and music molded the tradition of liberal studies. The relation between Boethius and Saint Thomas is being reconsidered on the basic metaphysical concepts, the relation of nature and subsistence in persons, and the moral link between a providing God and man's search for virtue and happiness.

COLLINS, James. Przywara's "Analogia Entis". *Thought* 17,119-135 Mr 42.

Przywara uses the analogy of being to develop a philosophy of religion adequate to different philosophies of God and religious emphases. The approaches to God include both metaphysical inference and concrete awareness, both transcendence and immanence. Religious attitudes can accent both human active striving and a sense of God's initiative and power in us.

COLLINS, James. Religious Thoughts Of A Scientist. *Mod Sch* 24,235-238 My 47.

COLLINS, James. Review Of Philosophy: Philosophers Of 1949-1950. *Thought* 26,146-159 Spr 51.

COLLINS, James. Review Of Philosophy: Philosophers Of 1951-52. *Thought* 27,101-124 Spr 52.

COLLINS, James. Review Of Philosophy: Philosophical Trends Of 1952. *Thought* 28,287-308 Sum 53.

COLLINS, James. Review Of Philosophy: Philosophy In 1953. *Thought* 29,271-296 Je 54.

COLLINS, James. Review Of Philosophy: The Year In Philosophy, 1954. *Thought* 30,84-104 Mr 55.

COLLINS, James. The Absolute And The Relative As A Problem In Modern Philosophy. *Proc Cath Phil Ass* 22,80-94 1947.

The Gilsonian typology of essentialist and existentialist philosophies has to be tested by shifting from a medieval to a modern context, where the distinction between absolutistic and relativistic philosophies is primary (as Royce and Dewey testify). But there are sharp divisions between Spinoza and Locke, Kant and Hegel, over how to envisage the relative in respect to the absolute. This suggests the need to break away from this doublet and to make a fresh start on the reality of man, world and God.

COLLINS, James. The Bond Of Natural Being. *Rev Metaph* 15,539-572 Je 62.

In elucidating the meaning of nature, we study its relationship with human existence and cognition and practice. The ingressive method steers between unreflective presence in nature and Husserl's idealism, by making reflective analyses upon man's relations with natural being. There is no necessary connection between a naive natural attitude, a psychologistic naturalism, and a steady intent to follow through on our links with objects of experience and their implications. This last path consists in a transition from regarding man simply as another object to grasping him as a natural existent and enhancer of humane values.

COLLINS, James. The Defender Of Human Intelligence. *Commonweal* 60,246-249 11 Je 54.

Jacques Maritain's work is a prime example of how philosophers must use keys to open doors rather than shut them. His mind bridges medieval sources and contemporary life along a wide spectrum of political, artistic, and scientific questions. His integral humanism seeks to unify mankind's findings and aspirations in these areas.

COLLINS, James. The Ethical View And Its Limits. *New Scholas* 23,3-37 Ja 49.

Kierkegaard's account of the ethical sphere is qualified by two considerations: it is not a norm, but a corrective to an esthetic-speculative view of moral life, and it prepares us for religious existence as more comprehensive. Ethical existence is open to the community and supportive of enduring commitments of will. Kierkegaard suspends ethical teleology in the sense of refounding Kantian law and duty upon God's goodness and, for the rest, relying upon faith.

COLLINS, James. The Existentialism Of Jean-Paul Sartre. *Thought* 23,59-100 Mr 48.

Sartre devises an ontological argument in reverse, by going from the prereflective cogito to the surrounding being-in-itself. Consciousness develops through a negating act that tries to overcome the unstructured mass of being-in-itself. Human consciousness seeks transcendence in social relations and God, but gets frustrated in both directions even though it never ceases in its drive toward social values.

COLLINS, James. The German Neoscholastic Approach To Heidegger. *Mod Sch* 21,143-152 Mr 44.

This studies the critical reception of Heidegger by German Neoscholastics after 1929. The focal points of appreciation are his views on being and beings, man's unique way of presence in the world, and the human attitude toward time and death. Heidegger is criticized for binding men so closely to the world that the call of transcendence does not open a route toward God.

COLLINS, James. The Meaning Of Existence. *New Scholas* 22,371-416 O 48.

In relation to truth, Kierkegaard regards existence as a move beyond scientific abstraction and objectivity (legitimacy in their area) to that which concerns the personal subject and his agency. In the practical order, the How of knowing counts most, since it concerns the reforming of human practical relationships and the openness to God. Truth about God's coming in history rests on an act of faith, not on a speculative analysis of time.

COLLINS, James. The Mind Of Kierkegaard, I: The Problem And Personal Outlook. *Mod Sch* 26,1-22 N 48.

Because Kierkegaard was such an intensely personal thinker, we must pay special attention to his life, cultural situation, and influence upon the existentialists. His early journals affirm the strong leverage exerted by the individual, as well as the attractions and pitfalls of the esthetic stance. His ultimate, most explosive theme

concerned the difficulty of becoming a Christian within established Christendom, which wedded religious values and social power so closely.

COLLINS, James. The Mind Of Kierkegaard, II: The Sphere Of Existence And The Romantic Outlook. *Mod Sch* 26,121-147 Ja 49.

Kierkegaard's books confront us with a host of pseudonyms, each representing either a facet of his own view or an imagined attitude. He does not permit the pseudonyms to represent him entirely, so that we must be cautious in attributing their opinions to him. But they do initiate us into his basic framework of three spheres of existence: the esthetic, moral, and religious. The Romantic-esthetic outlook is personified in Don Juan (sensual immediacy), Faust the doubter, and Ahasuerus the despairer.

COLLINS, James. The Mind Of Kierkegaard, III: The Attack Upon Hegelianism. *Mod Sch* 26,219-250 Mr 49.

Kierkegaard studied Hegel as the fount of a widespread cultural move to fuse Christianity with philosophy and contemporary culture. Schelling helped Kierkegaard to appreciate personal existence, just as Trendelenburg made him see the vast difference between conceptual and real movement. But the Hegelians failed to assimilate real activity and existential freedom to their dialectic of world history and pure thought.

COLLINS, James. The Mind Of Kierkegaard, IV: Becoming A Christian In Christendom. *Mod Sch* 26,293-322 My 49.

All paths in Kierkegaard converge on the problem of religion. It is the culminating sphere of existence, but it does not automatically assimilate esthetic imagination and ethical autonomy. Moreover, there is an important distinction between Religiousness A (which fulfills our natural existence) and Religiousness B or the relation between the believer and God in history. Kierkegaard based the latter relation upon a leap of faith and a life of suffering.

COLLINS, James. The Nature Of The Human Individual. *New Scholas* 23,147-185 Ap 49.

We cannot engage in the spheres of existence without respecting the individual and improving his lot in modern mass society. Kierkegaard's journals for 1846-1848 reveal his awareness of social revolution and his determination that individual existents will not be submerged in the heedless crowd. Religious equality requires the value of single persons before God, without eliminating social union.

COLLINS, James. The Neo-Scholastic Critique Of Nicolai Hartmann. *Phil Phenomenol Res* 6,109-132 S 45.

This is a report on the reception of Hartmann's epistemology and ontology by German and Italian Scholastics (1920-40). They appreciated his central attraction to the problem of being, his opening of human cognition to being, and his effort to transcend both idealism and naive realism. But realism can include a critical recognition of the transcendence factor in knowing and valuing, as well as a constant striving with the limits and perspectives of man's study of being. These are marks of human finitude rather than of irrationality in being.

COLLINS, James. The Problem Of A Philosophia Perennis. *Thought* 28,571-597 Wint 1953-54.

The notion of a perennial philosophy cannot remain a mindless slogan but must be critically examined. There are differences in principle between sense realism and spiritual interiorism which cannot be smoothed over as pluralistic tensions. The many conflicting positions generate several kinds of philosophies, in the sense of widespread lasting options which force us eventually to treat questions of being and knowledge apart from appeal to perennality. Factual plurality cannot convert itself into plurality-in-principle.

COLLINS, James. The Role Of Monistic Idealism In Croce's Esthetic. *New Scholas* 17,32-58 Ja 43.

In this article, Croce's equation between intuition, expression, and art depends upon his own reformed type of idealism. Intuition is quite literally a creative process, a bringing forth of both the matter and the form of spiritual activity. Art belongs within the process of creative self-expression and is totally fulfilled in and through this immanent forming. Nothing essential to artistic meaning and work comes from practical objectification in the world, since the latter reference belongs to economic and political modes of spirit.

COLLINS, James. The Work Of Rudolf Allers. *New Scholas* 38,281-309 Jl 64.

Allers (1883-1963) did pioneer psychiatric work in Vienna and continued his psychiatric and philosophical research at American universities. One focus of his thought was that of man the microcosmos, an idea which expressed the natural context and opportunity for harmonization of human activities and cultural forms. Another theme was the interrelation between the active person, the impelling character, and the personality born out of the interplay of agents in the world. For Allers, human work enables us to steer between a too subjective closure and an extreme objectification of life and motivation.

COLLINS, James. Toward A Philosophically Ordered Thomism. *New Scholas* 32,301-326 Jl 58.

Whereas Gilson treated Saint Thomas in relation to what is revealable by God, other approaches are required to bring the philosophical work of Saint Thomas into helpful relations with modern philosophers. A rethinking of issues depends on close study of human experience, coupled with inferences starting with man and the sensible world. Using this philosophical order and its sources of evidence, one can both use the resources of Saint Thomas and struggle with the real difficulties and procedures in modern philosophy.

COLLINS, James. Weiss's Exploration Of Religion. *Rev Metaph* 19,301-328 D 65.

There is an unbroken thread of interest in problems of religion running throughout Weiss's books. His principles of actuality and ideality generate a tension that points beyond the ethics of immanence to transcendence, so that religion is a major completional form of human freedom. Proofs of God (the fourth mode of being) are

- expressions of our seeking. The philosophy of religion analyzes the many regional manifestations of religious experience in both private life and public institutions.
- COLLINS, Joseph B.** *Christian Mysticism In The Elizabethan Age, With Its Background In Mystical Methodology.* Baltimore Johns Hopkins Pr 1940.
- This book is a distinct contribution to mystical literature. Dr Collins has traced the background influences, both indigenous and foreign, and he has given convincing evidence of a long succession of mystics who flourished and bore their witness while Puritanism was slowly winning its place in Great Britain. The work culminates with an excellent study of mysticism in Spenser's *Faerie Queene* and in his *Fowre Hymnes*.
- COLLINS, Joseph F.** Intentionality In The Philosophy Of Avicenna. *Mod Sch* 21,204-215 My 44.
- COLLINS, Joseph P.** God's Eternal Law. *Thomist* 23,497-532 O 60.

- COLMAN, S J.** Nietzsche As Politique Et Moraliste. *J Hist Ideas* 27,549-574 O-D 66.
- The article examines the legitimacy of numerous commentaries on Nietzsche's social and ethical writings. The author discusses the reasons for what he believes to be a distortion of Nietzsche's thought by his critics. Linguistic misunderstandings, ignorance derived from professional antipathies, inherited national prejudices, and historical mistakes are all claimed to have contributed to this distortion of Nietzsche's ideas. The author particularly addresses the question of the use of Nietzsche's texts by the Nazis. He concludes that only when scholars care enough about Nietzsche to reexamine the original works, will a measurable change in attitude occur.
- COLODNY, Robert G (ed).** *Beyond The Edge Of Certainty: Essays In Contemporary Science And Philosophy.* Englewood Cliffs NJ Prentice-Hall 1965.
- The papers in this series are concerned primarily with the problems of physical science, especially classical mechanics, thermodynamics, and astrophysics. The focus is especially on the problem of empirical methodology.
- COLODNY, Robert G (ed).** *Mind And Cosmos, Essays In Contemporary Science And Philosophy.* Pittsburgh Univ Pitt Pr 1966.
- This book has two parts, as suggested by the title, Part II of which contains Thomas Gold's *Cosmic Processes and the Nature of Time*, and Henry Morganau's *The Philosophical Legacy of the Quantum Theory*. Part I: *Mind*—consists of eight essays.
- COLODNY, Robert Garland (ed)** and Hempel, Carl G (ed). *Frontiers Of Science And Philosophy.* Pittsburgh Univ Of Pitt Pr 1962.

- COMFORT, Alexander.** *The Nature Of Human Nature.* NY Harper & Row 1966.
- COMMAGER, Henry Steele.** *The American Mind; An Interpretation Thought And Character Since The 1880's.* New Haven Yale Univ Pr 1950.
- With a frontispiece by William James, one can gather at the outset how dominantly the spirit of pragmatism pervades this vibrant survey of our country's literature, art, religion, science and philosophy over the past seventy years. An interesting chapter devoted to "John Fiske and the Evolutionary Philosophy" serves to add to the current increasing interest in this prolific writer. The chapter on William James and Pragmatism, with but passing reference to Peirce, serves admirably to contrast the pragmatism of James and Dewey, largely by emphasizing the link of James to the past of Transcendentalism and the forward step of Dewey toward the twentieth century social concern. Religion, sociology, economics, politics and law are all extensively treated in a volume well deserving unanimity of acclaim for its Pulitzer potentialities.

- CONANT, James Bryant.** *Science And Common Sense.* New Haven Yale Univ Pr 1951.
- CONANT, James Bryant.** *Two Modes Of Thought: My Encounters With Science And Education.* NY Trident Pr 1964.
- Dr Conant, drawing upon his experiences as a chemist, an educator, and a diplomat, is concerned in this volume of the "Credo Series" with the contrast between empirical-inductive and theoretical-deductive modes of thought. He points out the use natural science and technology make of both approaches. He also indicates that American thought tends to be primarily empirical, as evidenced by the importance of American inventors in the 19th century in contrast to American theoreticians. This

tendency is further supported by discussion of the impact of the case-study method of teaching law in the United States as opposed to that of the code method in Germany. The book ends with pleas for mutual tolerance on the part of advocates of each of the modes and for attention on the part of educators to maintaining a balance in their curricula between the two approaches to knowledge.

CONANT, James Bryant and Nash, Leonard K. *Harvard Case Histories In Experimental Science.* Cambridge Harvard Univ Pr 1957.

Prepared as a series of brochures for a course on general science at Harvard, this work is now brought out in a library edition, for those with other interests who want to know what natural science is about, what the scientists are trying to do, and the methods used. Cases are selected from the great scientific discoveries of the past; and the steps actually taken are followed in sufficient detail to reveal the aims and methods of those who did the work.

CONGER, George P. *Synoptic Naturalism.* Minneapolis 1960.

An extraordinarily stimulating work in which Professor Conger presents his "hypothesis of epitomization." According to this theory the natural world is divided into three basic realms which are ordered in a number of complex ways. Logical and mathematical entities form realms also, and are epitomized by a "chronogeometric" realm which provides a relational system that constitutes the "milieu" of the natural world.

CONGER, George P. A Naturalistic Approach To Sāmkhya-Yoga. *Phil East West* 3,233-240 O 53.

CONGER, George P. Did India Influence Early Greek Philosophies? *Phil East West* 2,102-128 JI 52.

CONGER, George Perigo. *The Ideologies Of Religion.* NY Round Table Pr 1940.

Conger presents, not a study of religions, but a highly condensed summary of their underlying philosophies or ideologies. The summary is really a summary of summaries. Each of the ideologies treated, Occultism, Mysticism, Supernaturalism, Idealism, Pragmatism, Evolutionism, Naturalism, Humanism and Economic Nationalism, is dealt with summarily. All are treated similarly, in from one to four chapters, by summarizing first the main features of the ideology, then the case for it, then the case against it, and finally an evaluation of it. Most of the summaries are so succinct that one would not understand them if he were not already acquainted with them.

An exposition and defense of Aristotle's and St Thomas' views of matter and becoming in the light of contemporary philosophy of science.

CONNELL, Richard J. *Logical Analysis: A New Approach.* Winona MN 1973.

This book attempts to teach one how to analyze arguments, the concepts and applications of "proof" by an emphasis upon discovering facts and disguised arguments before introducing logical theories. Part I discusses facts, "observables" and our mental interpretations of them. Part II analyzes hidden argument embedded in ordinary expressions and de-emphasizes the early use of symbols. Part III discusses logical and related topics, their unrecognized effects and use in normal expressions,

- e.g., signs and their effects on argumentative patterns. Part IV consists of readings collected for such analysis and the exemplification of the foregoing topics.

- The author has provided a comprehensive analysis of comedy as an aesthetic attitude. He discusses his theory of comedy. Examples and illustrations of the points discussed are drawn from Aristophanes, Homer, Shakespeare, Cervantes, Fielding, Carroll and many others.
- COOK, Albert.** The Beginning Of Fiction: Cervantes. *J Aes Art Crit* 17,463-472 Je 59.
- COOK, John W.** Wittgenstein On Privacy. *Phil Rev* 74,281-314 JI 65.
- It is argued that Wittgenstein's treatment of the idea of a private language has been widely misunderstood because of a failure to recognize that he rejects not only the idea that we could invent names for private objects but also the very idea that there are such objects. Sections 246-254 of *Philosophical Investigations* are elaborated in an attempt to show that Wittgenstein, far from accepting the received view that sensations are essentially private, is exposing the false grammatical analogies that give rise to that view. It is also argued that it is no escape from these false analogies to say that it is logically impossible to have (or feel) another person's sensations. Two current views about the nature of "logical impossibilities" are discussed, and both are found to be incoherent.

- COOMARASWAMY, Ananda K.** *Spiritual Authority And Temporal Power In The Indian Theory Of Government.* New Haven CT 1942.
- In Indian thinking good rule is achieved by a king who is guided by a Brāhman priest, the Purohita. Modern as well as ancient Indians think this way. What should be done when bad government of might without right is in force? "There is nothing that can be truly and well done or made except by the man in whom the marriage of the Sacerdotium and the Regnum has been consummated, nor can any peace be made except by those who have made their peace with themselves." India's fight for freedom and autonomy has been made in a manner generally consistent with Indian philosophy of government.

- COOPER, Burton.** How Does God Act In Our Time: An Invitation To A Dialogue Between Process And Liberation Theologies. *Union S Q R* 32,25-35 Fall 76.
- The purpose of this article is to lay the basis for a mutually creative relationship between process and liberation theologies. Black, feminist, and Latin American liberation theologians argue that traditional theology is rooted in an interpretation of biblical faith which reflects the bias of a male dominated, white, Western society. To break out of this limiting interpretation, they are reaching toward an open-ended and dynamic view of history and existence and an understanding of the God-world relation which parallels Whiteheadian notions. This study elaborates the thesis that process theology is supportive of the critique and ethic of the liberation theologies and can provide an insightful philosophical basis for its thinking.
- COOPER, Jane Wilcox.** The Analysis Of The Question Of Values And Evaluation In Educational Philosophy. *Educ Theor* 4,4-15 Ja 54.
- COOPER, John Charles.** The Epistemological Order Of Value And Fact. *Ohio J Relig Stud* 5,78-83 Ap 77.
- This article raises the question, do values precede facts? Do we evaluate data, instance values, or are values super (synthetic) facts? The article argues that it is possible that values are prior to facts in human cognition. This is the basis of Aristotle's view and of the modern thinker, Paul Tillich. The author gives a number of negative and positive instances that tend to show, Aristotle and Tillich are correct.

COOPER, John M. *Reason And Human Good In Aristotle.* Cambridge Harvard Univ Pr 1975.

This book studies two concepts central to Aristotle's moral philosophy: *eudaimonia*, and practical reasoning. The first and longest of the three chapters attempts (a) to work out how Aristotle's general theory of means-end reasoning applies specifically to moral thinking; (b) to lay out the problem of the relation between intermediate and hence calculated means and ultimate, hence undeliberated ends; and (c) to reject the usual claim that practical reasoning terminates in an individual action. The second and last chapters concern *eudaimonia*, 'moral virtue', and the question of Aristotle's 'intellectualism in ethics'. The author argues in detail that the intellectualist interpretation of Aristotle's ethics cannot make coherent sense of *Nicomachean Ethics* as a whole, and that the *Eudemian* doctrine of the best life as that of mixed moral virtue and theoretical excellence is preferable.

COOPER, Leon N. *An Introduction To The Meaning And Structure Of Physics.* NY Harper & Row 1968.

COOPER, Neil. Ontological Commitment. *Monist* 50,125-129 Ja 66.

In this paper Quine's criterion of ontological commitment is examined and rejected as incapable of distinguishing genuine from bogus ontological commitments. Applying Quine's strict test for ambiguity, "exists" is shown to have two senses in application to properties, classes and numbers, a formal sense and a material sense. In the material sense, to say that a property exists is to say that it has instances; in the formal sense, to say that a property exists is to say that it is possible to use a property-expression meaningfully. The distinction is clarified by means of the notion of "semantic ascent." Such ascent is essential for explaining the meaning of formal existence-statements. These are vacuous and do not genuinely commit one to the existence of anything. Quine's purely formal test does not reveal this and thus is responsible for setting spurious problems about "countenancing" abstract entities.

COPELSTON, Frederick Charles. *A History Of Philosophy, Vol III: Ockham To Suárez.* Westminster MD Newman Pr 1953.

COPELSTON, Frederick Charles. *Friedrich Nietzsche: Philosopher Of Culture.* NY Barnes & Noble 1975.

Nietzsche's attitude towards Christianity, and the influence of his concepts upon the general decline of Christian authority are here ably discussed by a scrupulously fair Jesuit writer. With much sympathy for Nietzsche the man and on the basis of a sound knowledge of his cultural writings, Father Copelston insists that Nietzsche's attacks were directed not against true Christianity but rather against an image of his own making. The violence of Nietzsche's denunciation seems to the author to indicate a perverse "bond with Christianity which he could not shake off." In the final chapter we are given a critical comparison between Bergson and Nietzsche.

COR, Laurence W. Reading A Play. *J Aes Art Crit* 21,321-326 Spr 63.

CORBETT, P E. *Law And Society In The Relations Of States.* NY Harcourt Brace 1951.

The author asks why, if it truly exists, international law has not produced the same degree of peace and order among nations that national law produces among individual citizens. The present work "begins with a study of the way in which the principal theories of international law came into being. Without postulating a law or society of nations, it then proceeds with an enquiry into some of the familiar patterns of international practice.... It is less concerned with the verbal conduct of governments than with their acts... the enquiry shows how in specific instances a *priori* doctrine has influenced practice as well as how in others it has travestied the acts and the intentions of governments."

CORDERO, Ronald A. Ethical Theory And The Teaching Of Values. *Educational Forum* 40,205-209 Ja 76.

The "classical" approach to the teaching of values assumes that there are absolute ethical facts which can be transmitted. But what will be the consequences for this position if the metaethical theories of either noncognitivism or relativistic existentialism prove to be correct? This article argues that the truth of either type of theory would require the abandonment of the classical approach—and proposes an alternative approach to value education which could serve until the metaethical issues are resolved.

CORMIER, Ramona T. The Understanding Of The Past. *Tulane Stud Phil* 10,47-58 1961.

I contend in this essay that the methods of scientific history, the interpretation of selected segments of the past, and of universal history, a panoramic interpretation of the whole of mankind's past, are not distinct. By using the framework of Whitehead's cosmology as the ontological basis for both types of history, I argue that both of these are legitimate enterprises essential to a progressive understanding of the past. In accordance with Whitehead's conception of Practical Reason, the scientific historian elaborates historical detail according to fixed methods, while the universal historian operates in terms of Speculative Reason by constructing a general interpretive scheme of the past that relates various specific methods to each other. In short, scientific history furnishes the methodologies to be coordinated by the universal historian and their interaction leads to the modification of special methods and to a more profound understanding of the past.

CORNMAN, James W. *Materialism And Sensations.* New Haven Yale Univ Pr 1971.

CORNMAN, James W. *Metaphysics, Reference, And Language.* New Haven Yale Univ Pr 1966.

J W Cornman argues that the problem of determining what, if anything, linguistic expressions refer to is central to most traditional philosophical problems. Cornman examines three "linguistic" approaches—"meaning analysis," "explication," and "use analysis"—and rejects these as well. However, he argues that if certain explicit

- assumptions are made about the general logical nature of referring expressions, it is possible for "use analysis" to provide solutions to the traditional problems.

- CORNMAN, James W.** The Identity Of Mind And Body. *J Phil* 59,486-492 Ag 62. The paper first argues that the problem expressed by the sentence, "Could mental states be brain processes" is not simply an empirical matter but involves a central conceptual problem. It next argues for the conclusion that there is a conceptual problem for any version of the Identity Theory, namely that since brain processes and mental states each have properties not truly attributable to the other, then—by Leibniz's principle—they are not the same. Finally, the paper proposes a way to avoid this conclusion by arguing that application of Leibniz's principle is unwarranted whenever its application involves a category mistake.
- CORNMAN, James W.** Uses Of Language And Philosophical Problems. *Phil Stud* 15,11-16 1964. Many contemporary philosophers hold that many of the traditional philosophical problems are essentially problems of language. The author goes into the positions of two such philosophers, H L A Hart and P H Nowell-Smith, to determine to what extent their claims are justified. Specifically, he goes into these philosophers' view that certain indicative sentences have a non-descriptive use. He argues that such views must show 1) why an expression used descriptively must have any special logical features and 2) what those special features are.
- CORNU, Auguste.** *The Origins Of Marxian Thought.* Springfield IL Thomas 1957. This is a monograph in "The American Lecture in Philosophy" series, edited by Marvin Farber. An essay in the history of ideas, it describes the climate of thought in which Marxism first developed. The various intellectual and social influences on Marx's own thinking are traced: especially Hegelianism, rationalism, romanticism, French materialism and socialism, and English political economy. The author brings the development of Marxist thought down to the *German Ideology* wherein the role of the forces of production and the material and dialectic conception of history are already fixed in general outline.

- COX, J W Roxbee.** Can I Know Beforehand What I Am Going To Decide? *Phil Rev* 72,88-92 Ja 63.
Cox attacks Carl Ginet's claim ("Can the Will be Caused," *Philosophical Review*, Volume 71, Pages 49-55) that it is conceptually impossible for a person to know what decision he will make before he makes it. Cox gives counterexamples and then examines Ginet's arguments, showing them to be invalid because they assimilate making a decision to discovering what that decision is.
- COX, Kendall B.** The Relevance Of Promises To Obligations On Act Utilitarianism. *Michigan Academician* 6,333-349 Wint 74.
This paper examines such arguments as either have been (by Carritt, Ross and Brandt) or could be offered for the claim that on act utilitarianism, either generally or in special cases, the fact that one has made a promise is irrelevant to determining what one is morally obligated to do. It interprets Bentham's act utilitarianism in terms of his calculus, and tries to show that any argument to prove the claim for this type of act utilitarianism either overlooks alternatives open to the promisor or establishes only a limited and toothless version of the claim.

- CRAWFORD, Donald W.** *Kant's Aesthetic Theory*. Madison 1974.
The author offers a detailed philosophical analysis of Kant's transcendental deduction of the judgment of taste. The main purpose of the book is to show that Kant's work does contain an important and fully elaborated line of argumentation concerning the nature of aesthetic experience. Kant's argument is divided into five stages, each of which is extensively analyzed and criticized in successive chapters of this book. The book concludes with a discussion of the possible relationship of Kant's aesthetic theory to art criticism.
- CRAWFORD, Patricia A.** A Survey Of Recent Religious Literature. *Phil Phenomenol Res* 24,429-441 Mr 64.
This article is a critical review and survey of 28 books in the field of religion and philosophy of religion. The major part of the article is given to reviews of the following books: John Hick's *Faith and Knowledge*, Paul Schmidt's *Religious Knowledge*, W T Stace's *Mysticism and Philosophy*, Henry Nelson Wieman's *Intellectual Foundation of Faith*, A C Das's *A Modern Incarnation of God: A Commentary on the life and teaching of Sri Ramakrishna*, Herman Dooyeweerd's *In the Twilight of Western Thought*, and Hans Freund's *The Balanced Life*.
- CRAWFORD, Patricia.** Existence, Predication, And Anselm. *Monist* 50,109-124 Ja 66.
I examine the bearing of the relationship between the concepts of existence and predication upon Anselm's ontological argument. While agreeing with Kant that existence is not a real predicate, I try to show that this constitutes no real objection to Anselm's argument. Considering Gareth Matthews' attempt to show that atheism can be consistently stated, I show that Matthews' statement is either a) not a statement of atheism or b) is logically inconsistent. These considerations raise the problem of meaning. From the discussion of this problem I argue to the relationship between Anselm's argument and the prayer opening the Prosligion.

- CRESSWELL, M J.** *Logics And Languages*. NY Barnes & Noble 1973.
This book is an attempt to show that methods developed for the semantics of systems of formal logic can be successfully applied to problems about the semantics of natural languages, and that such methods can take account of features which have often been thought incapable of formal treatment, such as vagueness, context dependence and metaphorical meaning. Parts I and II set out a class of formal languages and their semantics. Parts III and IV try to show that these formal languages are rich enough to be used in the precise description of natural languages.
- CRESSWELL, M J.** On The Logic Of Incomplete Answers. *J Sym Log* 30,65-68 Mr 65.
- CRICK, B.** *In Defence Of Politics*. Chicago Univ Chicago Pr 1962.
Politics is defined as a governing activity which strives to reconcile conflicting interests without eliminating them. It is therefore threatened by tendencies in

democracy, social science, conservatism, liberalism, and socialism, as well as by the more obvious forms of totalitarianism.

CRITES, Stephen. *In The Twilight Of Christendom; Hegel Vs Kierkegaard On Faith And History.* Chambersberg PA Amer Acad Of Relig 1972.

Stephen Crites argues that Hegel and Kierkegaard in the XIXth Century posed the intellectual options open to Christianity in the XXth Century. The Kierkegaardian position is the "either-or," it is the position of man confronted with alternative life options, which options function to elevate man beyond his temporal limitations and to project him towards an unknown future. Hegel's position is one which encompasses the thinker's knowledge and experience as "an aesthetic totality." The knowing subject is elevated in consciousness beyond the temporality of an historical being.

CRITTENDEN, Charles. Fictional Existence. *Amer Phil Quart* 3,317–321 O 66.

Apparently we can make statements about fictitious objects and refer to them, but this has very often been denied. Yet the natural view can be defended in terms of a distinction between assertions about objects in fictional works *already written*, and those made by an author in the course of *writing* fiction. The former are true or false and subject to verification in a way analogous to empirical statements. Yet none of this holds for the latter, which do not describe but *set out* a fictional situation. Fictional characters and objects are created by an author simply through his writing about them; hence the criterion for whether a fictitious object exists is whether it is mentioned in a work of fiction. In terms of this analysis the classical objections against such a view can be answered; there can even be round squares if an author chooses to give them a role in a story.

CROCKER, Lester G. *Nature And Culture: Ethical Thought In The French Enlightenment.* Baltimore Johns Hopkins Pr 1963.

an Age of Crisis concerns itself with the "renewal of ethical thought in the seventeenth and eighteenth centuries." The material is developed around two major topics: "The Nature and Genesis of Moral Experience," and "Moral Values." Under the first, major consideration is given to "Natural Law," "Moral Sense Theories," and "Experimental Origins of Moral Values," under the second, "The Utilitarian Synthesis," "The Nihilist Dissolution," and "Ethics and Politics." Considerable attention is given to the views of Bayle, Diderot, Helvétius, Hobbes, d'Holbach, Hume, Kant, Montesquieu, Rousseau, and Voltaire.

CROCKETT, Campbell. The Confusion Over Nominalism. *J Phil* 47,752–757 D 50.

Positions which reject nominalism as a theory of universals are criticized in this article. Nominalism is stipulatively described as, "the view that universal concepts designate

resembling particulars and that these particulars resemble one another by virtue of their intrinsic, individual nature." The author does not argue the position that nominalism is an adequate theory of universals but rather maintains criticisms of nominalism are ineffective when they assume scepticism, subjectivism, or materialism are internally related to nominalism.

CROMBIE, Ian MacHattie. *An Examination Of Plato's Doctrines, II: Plato On Knowledge And Reality.* NY Humanities Pr 1963.

Crombie's second volume deals with Plato's epistemology, cosmology and theory of forms. The author attempts to fit Plato "more into the company of Aristotle, Hume, Kant or Russell." He distinguishes Plato the poet from Plato the philosopher, and suggests that it is the poetic aspect of Plato's writings which lend credence to the mystical Plato of Plotinus.

CROMBIE, Ian MacHattie. *An Examination Of Plato's Doctrines, Vol I.* NY Humanities Pr 1962.

Volume I of a two-volume study. The first volume deals with "topics of more general interest," Volume II being reserved for "more technical philosophical topics." Crombie organizes his "interpretation of Plato's doctrines" by topics rather than "dialogue by dialogue," except for an extended treatment of the *Republic* intended to "show how Plato's opinions are bound together." Intended to be a defense of Plato against the view held by "contemporary students of philosophy" according to which "Platonism" stands "for the practice of trying to solve logical problems by postulating metaphysical entities."

CRONAN, Edward P. *The Dignity Of The Human Person.* NY Philosophical Lib 1955.

This essay in Christian anthropology focuses its attention on the problem of the essential value of the human being as an individual, *qua* person. What entitles man to the designation "person" is his possession of rationality, which renders the complexities of his nature possible, and with them his superiority among created things. In contrast to the temporary and irrational existence of the rest of nature, man is able by his rational powers to become aware of God, and to understand that he is "creation's God," of a value far beyond that of any rival entity. Man is not God, however, but the image of God, uniquely re-presenting His nature and activity in the created world.

CROPSEY, Joseph. What Is Welfare Economics? *Ethics* 65,116–125 Ja 55.

CROSBY, Barbara Stevens and Rule, John C. Bibliography Of Works On Arnold J Toynbee, 1946–1960. *Hist Theor* 4,212–233 1965.

CROSBY, Donald A. Religion And Solitariness. *J Amer Acad Relig* 40,21–35 Mr 72.

This article is a study of Whitehead's theory of the origin, focus, and purpose of religion, together with a critique of its adequacy, if taken as a descriptive theory. "Communal" and "rational" religion are compared and contrasted. The main thrust of the article is to elucidate the relation between religion and solitariness, and to show connections between stress on the importance of the individual in Whitehead's theory of religion and the same stress in his metaphysics.

CROSBY, John F. Evolutionism And The Ontology Of The Human Person: Critique Of The Marxist Theory Of The Emergence Of Man. *Review Of Politics* 38,208–243 Ap 76.

In this paper we claim to offer a systematic refutation of the Marxist theory that man brought himself forth from the apes by productive work, and thus that he in a certain sense created himself as man. Our first line of argument is that a being which can do productive work must already be a man, and that it is *petitio principii* to explain through work his becoming a man. We then consider all possible ways of avoiding the *petitio*, and deal critically with each. In doing so we reflect on the essential differences between the human person and animals. These differences are found to exclude other forms of evolutionism besides just the Marxist.

CROSS, Whitney R. Ideas In Politics: The Conservation Policies Of The Two Roosevelts. *J Hist Ideas* 14,421–438 Je 53.

CROSSER, Paul K. *Economic Fictions: A Critique Of Subjectivistic Economic Theory.* NY Philosophical Lib 1957.

This book is a philosophical treatment of the "subjectivist" economic themes of von Thunen, Merger, Wieser, Boehm-Bawerk, John Bates Clark, Schumpeter, Keynes and Spann, all of whom, according to the author, employ "hypothetical fictions" in constructing their systems.

CROSSER, Paul K. *The Nihilism Of John Dewey.* NY Philosophical Lib 1955.

The author's thesis is that the principle of continuity in the hands of John Dewey was "a major device for defying determinability and denying differentiation." In the light of this thesis he examines Dewey's theories of knowledge, art, and education, arguing that Dewey's principle of continuity blurs or even annihilates the distinctions between organism and environment, the subjective and the objective, and many such pairs. This prevents the working out of critical standards as to what is logical, artistic, and educative. The author's intention is to uncover "the utter meaninglessness of Dewey's philosophy of science, the utter emptiness of his philosophy of art, and the utter sterility of his philosophy of education."

CROSSON, Frederick J. Phenomenology And Realism. *Int Phil Quart* 6,455-464 S 66. There is an opposition between two conceptions of the world in the work of Edmund Husserl. According to the earliest, the sum total of the things that are and could be manifested in perception constitute a world in the sense of a Kantian idea. According to the later, the world is not the object of a theoretical consciousness, but is the passive pre-given ground of all noetic acts. It is argued that Husserl's notion of the hyletic component of consciousness kept him from rejecting the first of these. Merleau-Ponty's theory of the world is criticized as illicitly concluding from the facticity of linguistic knowledge to the relativity of our knowledge.

CROSSON, Frederick J. Plato's *Statesman*: Unity And Pluralism. *New Scholas* 37,28-43 Ja 63.

CROSSON, Frederick J. The Concept Of Mind And The Concept Of Consciousness. *J Existent* 6,449-458 Sum 66.

CROSSON, Frederick J (ed) and Sayre, Kenneth M (ed). *Philosophy And Cybernetics.* Notre Dame Notre Dame Univ Pr 1967.

The various papers represent a mixture of technical and non-technical discussion concentrating on the problem of distinguishing, if possible, between artificial and human intelligence. It is argued that research in information theory may lead to changes in our conception of intelligent human behavior. Also discussed are the applications of information theory to phenomenology and certain Gestalt phenomena.

CROWE, Charles. The Emergence Of Progressive History. *J Hist Ideas* 27,109-124 Ja-Mr 66.

This article traces the origins and development of progressive history in American thought. The author believes that increasing emphasis on experience created an anti-intellectualism and epistemological relativism among various historians, who then found an interpretation of American history which saw as its touchstone the conflict between agrarianism and capitalism. Numerous history texts are evaluated to see the extent to which they embody tenets of progressive history.

CROWE, Fr E (ed). *Spirit As Inquiry: Studies In Honor Of Bernard Lonergan.* Chicago 1964.

This book has nineteen contributions that study different aspects of Lonergan's thought, three initial messages of appreciation from colleagues, a concluding word from the jubilarian, and a bibliography of Lonergan's writings up to that time. Some topics are as follows: Lonergan's intellectual development, philosophy of science, theory and performance in cognition, logic, abstraction, metaphysics, being, judgment, interpretation, poetry, education; four articles are on questions of theology. Lonergan's own article explains his views on the three levels of cognitional structure, and relates objective knowing to subjective living.

CROWE, Frederick E. Complacency And Concern In The Thought Of St Thomas. *Theological Studies* 20,1-39 Mr 59.

The Thomist "intentio finis" (similar to Weiss' "concern") is taken as familiar, and the thrust of the three installments is to the study of "complacentia" as a more fundamental and contrasting form of human willing. The word means that will, before being principle of process to a term, is principle of affective consent, of acceptance of what is, of concord with the universe. This view, implicit in Aquinas, is not developed by him, but represents an urgent modern need. It is further clarified in contrast to Nygren's "agape" and "eros," Schopenhauer's willing as a striving based on need, Nietzsche's creative willing, and Heidegger's "Sorge."

CROWE, Frederick E. The Exigent Mind: Bernard Lonergan's Intellectualism. *Continuum* 2,316-333 Autumn 64.

The first part studies Lonergan's intellectual development through five stages: his doctoral dissertation (basic ideas of Thomist psychology), the "verbum" articles (Thomist cognitional theory), the book *Insight* and Lonergan's own independent cognitional theory and philosophy, his concern with method (based on *Insight*), and his later focus on the categories of meaning and historical consciousness. The second part deals with the reader's study of his own interior activity as a necessary condition for understanding what Lonergan is talking about, and draws a parallel between Kierkegaard's Socratic maieutic and Lonergan's invitation to self-appropriation.

This essay is a critical study of David Polo's *Conditions of Rational Inquiry*. The main focus centers on the relation of moral principles and rules.

CUA, A S. The Logic Of Confucian Dialogues. *Stud Phil Hist Phil* 4,18-33 1967.

This essay maps out the main conceptual features of Confucian dialogues, as displaying a way of thinking characteristic of Chinese moral thought, and sets forth some contrasts with the Socratic dialogues.

CUA, Antonio S. *Reason And Virtue: A Study In The Ethics Of Richard Price.* Athens OH Ohio Univ Press 1966.

This is a critical study of Richard Price's ethical theory in terms of the arguments and problems which bear relevance and resemblance to the Twentieth Century deontological intuitionism. The study focuses mainly on Price's epistemology of morals as portraying a tension between perceptual and philosophical intuitionism. It is maintained that the former view is more plausible in that it receives partial empirical support from Kohler's theory of value. The appendix explores the various uses of the notion of moral intuition and evaluates the various arguments against these uses in both classical and contemporary moral philosophy.

CUA, Antonio S. Ethics, Contemporary Analytic Theories Of. *New Catholic Encyclopedia* 16,160-169 1975.

This survey of ethical theories deals with selected works from 1903 to 1970 in terms of standard approaches and topics in recent moral philosophy.

CUA, Antonio S. Some Reflections On Richard Price's Theory Of Obligation. *Ohio University Review* 3,80-94 1961.

This essay expounds one basic feature of Price's ethics of obligation and the difficulties it encounters in the light of contemporary ethical analysis. It is argued that Price's deontology consists of two incompatible views. Consistent with his intentions, Price should have espoused a form of perceptual intuitionism rather than philosophical intuitionism.

CUFFEL, Victoria. The Classical Greek Concept Of Slavery. *J Hist Ideas* 27,323-342 Jl-S 66.

This article traces the views of ancient authors on their understanding of slavery. The author's thesis is that because the presence of slaves was a daily fact for Greeks, few writers seriously examined it. The author finds four basic elements in the classical conception of slavery: 1) slavery as the imposition of fate; 2) slavery as the justifiable position of inferiors; 3) communal slavery; 4) and the slavery of men to their own evil selves and base desires. The last of these is judged by the author as having had the strongest impact on Greek thought.

CULBERTSON, James T. *The Minds Of Robots: Sense Data, Memory Images, And Behavior In Conscious Automata.* Urbana 1963.

This book presents "a physical theory of mental experience," and attempts to show "how subjective phenomena can be constructed out of impulses passing through certain artificial components" which are called "neurons" and to some extent resemble biological neurons. The book is divided into three parts. The first, dealing with unconscious automata, deals first with memoryless robots and then with "complete" robots, those with total memory. Part two introduces the topic of conscious automata, and deals with the perception of sense qualities, depth perception, sensed duration, and stream of consciousness. The final part deals with conscious automata with consciously directed behavior.

- CUMMINS, Phillip.** Perceptual Relativity And Ideas In The Mind. *Phil Phenomenol Res* 24,202-214 D 63.
- The most important link between Berkeley and the continental philosophers is examined, viz., the argument from perceptual relativity, which Berkeley used to destroy the primary and secondary qualities distinction. Berkeley refuted Bayles' skepticism and in so doing, stated doctrines similar to those of Malebranche. The above argument is basically that secondary qualities as perceived are inconstant and relative, and hence must be sensations in the perceiving mind. It is assumed that sensed qualities must be properties of minds, (which cannot be properties of non-minds). Berkeley's argument proves the dependence of all sensible qualities upon the mind.

- CUNNINGHAM, Francis J.** Mimesis: A Theory Of Limited Scope For Plato. *University Of Portland Review* 28,3-15 Spr 76.
- The purpose of the article is to find room within Plato for a positive approach to creativity by showing that the negative position toward the arts exemplified in the mimesis theory is a limited application. This is shown through an examination of the contexts within which the theory is presented, and through a careful analysis of the implicit and explicit textual limitations of the theory. The conclusion is reached that Plato deliberately leaves room for a more positive approach to art, although this approach is not articulated in the Middle dialogues.

- The writer of this volume seeks to rethink the traditions and issues of education by way of the Catholic faith. Introducing education from the standpoints of idealism, materialism, humanism, supernaturalism, with a distinct emphasis on supernaturalism which the author maintains is the bulwark of a Christian philosophy of education, the volume surveys the biological and psychological foundations observed in man, his mechanism, motivation, and learning. Part Two of the volume presents "Means of Education" as the materials of the curriculum, the problems of the teacher implied in teaching techniques, and the problems of the institution bearing on the rights and duties of education.
- CUPITT, Don.** *The Leap Of Reason*. Philadelphia Westminster Pr 1976.
- The author argues for a non-relativistic, non-subjectivistic, and non-pluralistic view of the world and man's place within it. He believes that the most adequate philosophical view, is one which is informed by the objectivity of the Christian perspective of the transcendent God. Only within such a perspective can modern man transcend relativism and relativistic models of the world in which he lives.

- CURELARU, M** and Eisenstadt, S N. *The Form Of Sociology: Paradigms And Crises*. NY Wiley 1976.
- This study offers a broad historical approach to the development, present state, and possible future directions of sociology as a science. The third theme removes it from the domain of pure history, since the authors provide evaluative analyses at many junctures. Its first three chapters are devoted to forerunners of sociology, its founding fathers, and the emergence of a distinctive sociological tradition in the twentieth century. Chapter 4 offers a survey of the major types of explicative paradigms. Two chapters follow on the development of sociology between the wars (Chapter 5) and following World War II (6). Four subsequent chapters are respectively devoted to the emergence of the structural-functional model, analytic controversies concerning counter-models, metascientific controversies concerning the nature and limitations of sociology, and contemporary analytic developments. The three closing chapters offer reflections on the contemporary analytic crisis in sociology, and the possible moves to broaden the sociological tradition.

- CURRY, Haskell B.** *Foundations Of Mathematical Logic*. NY McGraw-Hill 1963.
- This text, aims to give a thorough account of the constructive theory of the first-order predicate calculus, marked by the two peculiarities of separating negation and quantification from the finite positive operations, and emphasizing the absolute or assertional calculus (thus similar to Heyting's intuitionistic calculus and Lorenzen's consequence logic). The first four chapters are preliminary, treating of the nature of logic and its relationship with mathematics, formal systems in general, Markov algorithms, epistheory, including a discussion of replacement, the theory of definition, and variables, and a chapter on lattices, including Skolem lattices. Chapter 5 takes up the positive connectives, Chapter 6 treats of negation, Chapter 7 is devoted to quantification, and modal operations are discussed in Chapter 8.

- CURRY, Walter Clyde.** *Milton's Ontology, Cosmogony And Physics*. Lexington 1957.
- The author analyzes Milton's cosmological and theological theories as expressed in both his philosophical writings and his poetry. He describes Milton as viewing the world as a boundless, but finite whole, and as employing various alchemical theses to describe and explain physical processes. Milton's theology resembled neo-Platonism in at least two respects: he believed that Chaos and Night were entities and Powers; and he accounted for the existence of evil both by a theory of emanation and by an analysis of the clash of finite entities with each other.

- Max Weber identifies rational legitimacy with legality and correctly sees it to be the prevailing type of legitimacy in modern society. The author inquires whether by thus subsuming the notion of legality under that of legitimacy one does not introduce a value judgment into a descriptive statement. He then proceeds to discuss differences between the ethically neutral positivism of recent Continental thought and the Anglo-American view of law as a continuous and purposeful process. The author closes with remarks on the apparent reduction of legitimacy to a question of natural law or of justice in Anglo-American thought.

- Many moralists still accept the theory of the cardinal virtues, but in its Thomistic form, according to which the four basic moral virtues are prudence, justice, temperance and fortitude. This paper argues 1) that when Christian thinkers took over the theory from the ancients, among their important innovations was the substitution of prudence, in its Aristotelian sense, for wisdom; 2) that this change was not an improvement, but rather a distortion, because wisdom is concerned with goods that are more high, permanent and comprehensive, because prudence is reducible to wisdom and because it is through wisdom rather than through prudence that we establish the direction and character of our lives.

- DANIÉLOU, Alain.** Hindu Polytheism. NY Bollingen Found 1964.
- The great wealth of literature and art of Hindu polytheism is legendary. By means of five major divisions Danilou explains this intricate polytheism in terms of (1) philosophy, (2) the gods of the Vedas, (3) the trinity, (4) the divine power as the goddess, (5) secondary gods, and (6) representation and the worship of deities. Appended are ninety pages of Sanskrit texts from the Śvetāsvatara Upaniṣad to the Yoga Sūtra Bhāṣya of Vyāsa. For philosophers, especially those studying and teaching Indian thought, this is a great compendium to assist those brought up in monotheism.

- DANNHAUSER, W J.** Nietzsche's View Of Socrates. Ithaca NY Cornell Univ Pr 1974.
- The primary intention of this study is to elucidate various central aspects of Nietzsche's writings in light of his understanding of the philosophical import of Socrates' existence and reflections. By tracing reference to Socrates in Nietzsche's writings it is indicated that Nietzsche as a thinker incorporated the penetrating critical spirit of Socrates and engaged in a sustained contest with him, especially in regard to a constant preoccupation with morality.
- DANTO, A C.** Mere Chronicle And History Proper. *J Phil* 50,173-182 Mr 53.
- DANTO, Arthur C.** Analytical Philosophy Of History. NY Cambridge Univ Pr 1965.
- The author thoroughly examines the sceptical objections to history and rejects them. In so doing he claims to bring out differences between the past and the future which exclude a philosophy of history that could predict. He discusses at length and rejects, the argument for determinism based on the law of excluded middle. He challenges the view that historical statements are all to be understood as causally explicable by the behaviour of individual human beings without ultimately presupposing any reference to wider social wholes and the laws governing them.
- DANTO, Arthur C.** Nietzsche As Philosopher. NY Macmillan 1965.
- The author argues that Nietzsche is entitled to be called a philosopher and not merely a critic of concepts, anarchist, literary radical and institutional nihilist. The gains made by recent linguistic and logical analyses are brought to bear on the works of Nietzsche with the purpose of exposing the underlying features of his thought. The aphorisms and *obiter dicta* are given a secondary place in favor of a critical examination of Nietzsche's nihilism, taken here to be the central concept in his philosophy and one that gives whatever systematic coherence pervades his writings. Nietzsche's own nihilism is interpreted here as a metaphysics rather than an ideology, at the bottom of which lies a set of beliefs asserting the fictional reality of religion, morality, art and science, all being but instances of what he termed Will-to-Power. Danto calls Nietzsche a dynamic idealist and presents him as one who saw the world as being at once devoid of meaning and as a domain of possibilities with human beings essaying to impose their willed and man-made orders. Danto treats in depth both the diagnostic and the constructive sides of Nietzsche's philosophy.

- DANTO, Arthur Coleman.** Jean-Paul Sartre. NY Viking Pr 1975.
- DANTO, Arthur Coleman.** Mysticism And Morality: Oriental Thought And Moral Philosophy. NY Basic Books 1972.
- The first chapter discusses the meta-ethical role of factual and metaphysical 'beliefs' which are presupposed in: 1) ancient India and China and 2) those contrasting ones of contemporary Western society. The remaining chapters are a critical survey of some major metaphysical and ethical doctrines as found in non-technical

religio-philosophical Indian and Chinese classics, e.g., the *Bhagavad Gītā*, (Pali) *Buddhist Nikāyas*, the *Tao Te Ching* and Chuang Tzu, but which omits Indian technical *sāstra* philosophy and post-classical Chinese philosophy.

DANTO, Arthur C. On Explanations In History. *Phil Sci* 23,15–30 Ja 56.

DANTO, Arthur C. On Historical Questioning. *J Phil* 51,89–98 F 54.

DANTO, Arthur C. The Problem Of Other Periods. *J Phil* 63,566–576 O 66.

The article asks to what extent we might succeed by way of historical study at an internal understanding of what it would have been like to live in periods other than our own. Periods have interiors as persons do and Danto's nomenclature is meant to connote a resemblance to the problem of Other Minds. But the problem of Other Periods arises mostly from "the nature of establishing the record itself." The problem is implicated logically in the concept of history. The discussion here is meant as an analytic step toward determining the contours of that concept and a metaphysical step toward appreciating the unique characteristics of historical existence. It ends by concluding that as with the problem of Other Minds, there is no privileged access to the interior of a period on the part of those whose period it is.

DANTO, Arthur. Seven Objections Against Austin's Analysis Of "I Know". *Phil Stud* 13,84–90 1962.

The article goes into Austin's position that "I know" has a performatory rather than a descriptive use. The author's examination centers on Austin's analogy between knowing and promising, pointing to what he holds to be dis-analogies between the two expressions, e.g., I may have known something for years, but I cannot, in this sense, have promised something for years. He concludes that while "I know" has a performatory use (as Austin pointed out) it also has a descriptive use and that it can even be used both ways at once.

DANTO, Arthur. The Artworld. *J Phil* 61,571–584 O 64.

Danto contrasts the traditional theory of art as imitation of reality with the notion of art as reality itself, in terms of which art works today must be interpreted. What makes contemporary art works art (e.g., Warhol's wood facsimiles of Brillo cartons)? Why is there a need to make them? They could not have been art fifty years ago. It must be the theory that makes them art.

DANTO, Arthur. What We Can Do. *J Phil* 60,435–445 JI 63.

The paper opens with a list of presuppositions that jointly constitute a fragment of a theory of action. Among the notions defined is that of a basic action, whose performance is not the result of any cause. (Familiar analogues in a certain theory of knowledge are noted). The main and purely philosophical concern of the paper is with actions that are never basic actions or, in other words, with the limits of "positive abnormality," defined by the performance of an action that is basic but not within a normal person's repertoire of basic actions; for example, dilating one's pupils at will.

DASGUPTA, Shashi Bhushan. *An Introduction To Tantric Buddhism*. Berkeley CA Shambhala 1974.

Dasgupta's study of Buddhist Tantra is a valuable text for serious students of Buddhism or comparative religious philosophy. Scattered throughout Dasgupta's work are numerous, sometimes lengthy, translations, paraphrases and summaries from Tantric texts, even now not readily available. While his translations and interpretations are sometimes suspect, an impression of the main outlines of Tantric philosophy and practice is readily available to the perceptive reader. One of Dasgupta's major contributions lies in delineating the way in which the rather abstruse philosophies of Mahayana are transformed by Tantra into specific methods for realizing the existential meaning of these philosophies, a transformation founded on the principle that "the body is the abode of all truth."

DASGUPTA, Surama. *Development Of Moral Philosophy In India*. NY Ungar 1965.

A traditionalist account of Indian philosophy, this book covers the major features of moral philosophy in India during the classical age (500 BC–200 AD). The account is based on the source material with little admixture of modern critical commentary. The book ends with a defense of Karma. One point she makes is that "If immortality cannot be proved, it cannot be disproved either." Finally, she says, "Of all freedom, highest is the freedom of the self from its own bondage and passions and desire; this has been the message of India and is the essence of all her moral thought."

DAUGERT, Stanley M. *The Philosophy Of Thorstein Veblen*. NY King's Crown Pr 1950.

The book traces the genesis and growth of Veblen's philosophical thought. It attempts to show how he was influenced by Kant, Spencer, Porter, Bellamy, Loeb, Dewey, and many other individuals, and to demonstrate how their thinking conditioned his philosophy of economics. While not designed as a completely definitive statement of the philosophy of Veblen, the book throws much light on a particular phase of Veblen's thought as yet too little explored.

DAVENPORT, Russell W. *The Dignity Of Man*. NY Harper 1955.

In the belief that "America today (1949) is a country without a philosophy," an influential American journalist and politician strongly influenced by Goethe and Rudolf Steiner, set on to supply one in the grand manner but without "academic philosophizing." His project of countering dialectical materialism with a form of "spirituality" was incomplete at his death in 1954, and the latter half of the book has been "compiled" from his unrevised drafts. The late author pleads for "the inward look" to counterbalance excessive "outward" attention to things rather than persons. "Let us not fear man, let us fear only what he believes in."

DAVIDSON, Donald. Actions, Reasons, And Causes. *J Phil* 60,685–699 N 63.

A reason is here said to *rationalize* an action when it explains the action by giving the agent's reason for performing it. This paper is an attempt to defend the position that rationalization is a species of ordinary causal explanation. Central to this argument is the notion of the *primary reason* why the agent did something, understood as consisting of his pro-attitude toward the action and a related belief. It is argued: (1) For us to understand how a reason rationalizes an action it is necessary and sufficient that we see how to construct a primary reason. (2) The primary reason for an action is its cause.

DAVIDSON, Donald. Emeroses By Other Names. *J Phil* 63,778–779 D 66.

In *Fact, Fiction and Forecast*, Nelson Goodman suggests that entrenchment of its predicates, taken singly, determines whether a statement is lawlike, i.e., whether it is confirmed by its instances. Using this criterion, the hypothesis (H₁) "All emeroses are gred" is not lawlike. Recently Goodman has defended his view by arguing that H₁ is not lawlike; in the present note this claim is challenged. Looming behind the immediate issue is the question whether lawlikeness, and confirmation relations generally, can be considered out of relation to surrounding theory.

DAVIDSON, Edward H. *Jonathan Edwards*. Boston Houghton Mifflin 1966.

This book is a short account of the greatest mind in early American philosophy. In an intellectual biography rather than a philosophical analysis, Davidson chronicles the life of a Puritan clergyman of the eighteenth century who single-mindedly devoted himself to increasing the clarity and intensity of his private experience. He calls Edwards "an analyst of immediate experience" and shows how his phenomenology of religious experience is a brilliant combination of Puritan theology and Locke's theory of sensation.

DAVIES, Gordon L. The Concept Of Denudation In Seventeenth-Century England. *J Hist Ideas* 27,278–284 Ap–Je 66.

The author examines various Seventeenth century works which deal with the belief that natural agents such as rivers are continually grinding down the continents, sweeping them into the sea. His thesis is that no English writer before 1690, doubts this belief, but that after this time few people accepted it until the Nineteenth century. He maintains that this change occurred for two reasons: 1) after 1690, there was widespread rejection of the belief in a decaying universe; and 2) English scientists became convinced that God's benevolence pervaded the universe. By the Nineteenth century scientific evidence once more gave credence to the theory of denudation.

DAVIES, John T. *The Scientific Approach*. NY Academic Pr 1965.

DAVIES, Robert M. *The Humanism Of Paul Elmer More*. NY Bookman Associates 1958.

The development of More's thought is traced from his youthful Calvinism to his final Platonic Christianity, and the thought is related to his literary criticism under the banner of "humanism," which "More chose to label himself to the end." The author concludes that "More's consideration of the sacramental life is undeniably the apex of his religious philosophy" and shows how this sacramentalism was interpreted in a

- Platonic fashion. "More became closely identified with Anglicanism... (but) never joined the church."

- DAVIS, Harold Eugene.** *Latin American Thought: An Historical Introduction.* Baton Rouge 1972.
- This historical introduction to Latin American thought is the most complete and scholarly work on the area. It is a history of ideas approach grounded in the author's thesis that the intellectual history of Latin America has been, in general, "revolutionary nationalism," by which is meant a search for fundamental and concluding chapters. Chapters are devoted to: pre-conquest and colonial thought; the age of reason and the independent movements; revolutionary liberalism, utilitarianism and traditionalism; positivism and evolutionism; traditionalism at the turn of the century; revolutionary and traditional twentieth century thought; Marxist thought; idealism, existentialism, and spiritualism; and neo-Christian thought. Perhaps the most positive feature of the book is the concluding chapter, in which is discussed what still can be done by way of research.

- DAVIS, Philip E.** *Moral Duty And Legal Responsibility.* NY 1966.
- This is a collection of well-known legal cases compiled for the purpose of giving specific content to ethical theory. Problems concerning the assignment of responsibility and problems of making and justifying a judgment of legal responsibility are the two main areas covered. These two areas are broken down into specific problems. Under the heading, e.g., "Problems of Justifying a Judgment," three subheadings appear: "Acts and Causes of Action" (including excerpts from such well known cases as Vossburg versus Putney and the Palsgraf case); "Legal Norms" (including excerpts from Erie versus Tompkins and Rochin versus California); "The Means and Limits of Persuasion." Each subheading includes about six cases and is preceded by an introduction to the problem. Each section is followed by notes pointing out questions raised by the cases. A glossary of legal terms is included.

- DAY, John Patrick.** *Inductive Probability.* NY Humanities Pr 1961.
- Day argues that the meaning of "probable" is partly evaluative and partly descriptive—to say that a proposition is probable is both to recommend its assertion and to say that a certain procedure shows it to be so. The paradigm of an inductive probability judgment, which is the major concern of the book, is "The fact that all observed A's are B's makes it probable that all A's are B's." Several more complex kinds of probability judgments are distinguished and discussed in detail, the author's own theory being illuminated by extensive criticism of the views of other philosophers, including Aristotle, Hume, Whewell, Mill, Peirce, Russell, Braithwaite, Carnap, and Von Wright. Philosophic problems related to induction, such as the existence of other minds and the reliability of memory, are briefly discussed. Ambitious in scope and carefully executed, the book demands, and rewards, close study.

- The first part of the book contains the development of Hindu religious thinking. It covers the usual development from the Vedas and the Upanishads to Shankara of the Absolutism of the Vedanta, with change as illusion; and the early Buddhism with its assertion that all is change, and there are no permanent substances or persons. Other topics include the cultural influences of the Jains, and the "four aspects" of Hinduism, especially the *Bhagavad Gita*, with a summary of Hindu philosophy, and especially the Sankhya philosophy. The section from page 367 follows the growth of Islam in India, with stress on the philosophical influence of al-Ghazali, with brief treatment of the Kikhs. Then follows the contacts with the West, Rammohun Roy, Tagore, the great importance of Gandhi, and a study of Pakistan.

- DE GROOD, David H.** *Haeckel's Theory Of The Unity Of Nature: A Monograph In The History Of Philosophy*. Boston Christopher 1965.
This monograph, based on an M A thesis submitted to the Department of Philosophy at the University of Buffalo, examines the materialistic cosmology of Ernst Haeckel (1834-1919), German scientist-philosopher whose *Riddle of the Universe* was widely read and attacked. DeGrood's treatment of Haeckel's materialistic monism is basically sympathetic, and in particular he defends Haeckel from the excessively harsh criticisms levelled against his work by Oliver Lodge, Friedrich Paulsen, and Ralph Barton Perry. DeGrood concurs with Marvin Farber's judgment that although Haeckel's work "was clearly imperfect and 'dated', it possessed virtues rarely seen in the literature of philosophy."

- DE LONG, Howard.** *A Profile Of Mathematical Logic*. Reading MA Addison-Wesley 1970.
This book presents the main outlines of mathematical logic. The first chapter describes the historical background of the subject, including a discussion of Aristotelian logic, Euclidean geometry, and the paradoxes. Chapter 2 briefly describes nineteenth century developments: non-Euclidean geometry, set theory, and more paradoxes. Chapter 3 provides an outline of the propositional and predicate calculus. Metatheory is the subject of Chapter 4, including a discussion of the consistency, correctness, completeness and decidability of the propositional and predicate calculus, and of arithmetic. There is an especially complete discussion of Gödel's incompleteness theorem. Chapter 5 concerns the philosophical implications of mathematical logic.
- DE LONG, Howard.** Unsolved Problems In Arithmetic. *Scientific American* 224 Mr 71.
There are arithmetic problems that a child of 10 can understand but that have nevertheless remained unsolved for hundreds of years. This article explains how metalogic reveals that the continuing failure to solve some of these problems may be due not to a lack of ingenuity, but to inherent limitations of both men and machines. A description is given of formal systems, including Gödel's and Church's theorems. The limitative aspects of these theorems becomes explicit via Church's thesis. The article concludes that arithmetic will continue to absorb our interest because its investigation demands human creativity.

- DE MARQUETTE, Jacques.** *Introduction To Comparative Mysticism*. NY Philosophical Lib 1949.
This book is a survey of mystic teachings from earliest times to the present. Chapter heads include "The Nature and Scope of Mysticism," "Indian Mysticism," "Buddhism," "Greek and Hebrew Sources of Christian Mysticism," "Christian Mysticism," "Islam" and "Message of Mysticism."
- DE MARTINO, Richard** And Suzuki, D T and Fromm, Erich. *Zen Buddhism And Psychoanalysis*. NY Harper 1960.
Growing out of a workshop on Zen Buddhism and Psychoanalysis, sponsored by the Department of Psychoanalysis of the Medical School of the National University of Mexico in 1957, the book consists of three lectures which, according to Erich Fromm in the Foreword, "will be of particular value to psychiatrists and psychologists and to many other thoughtful people interested in the problem of man...." In the opening essay, "Lectures on Zen Buddhism," D T Suzuki discusses Zen Buddhism with special reference to its treatment of psychological problems, such as the unconscious and the self. In the second lecture Erich Fromm undertakes to show how the concepts of Zen Buddhism are relevant to, suggestive for and clarificatory of the theory and technique of psychoanalysis. In the concluding lecture, Richard De Martino provides "a general consideration of Zen Buddhism in its relation to the human situation."

- DE SANTILLANA, Giorgio.** *Reflections On Men And Ideas*. Cambridge MA MIT Pr 1970.
- The present collection includes essays by Santillana in English, French, and Italian, previously published or new, on scientific giants of the past and present, problems, schools of thought, influences, and prospects. Some of the essays probe the contributions of Leonardo, Galileo, Bruno, Newton, Leibniz, Vico, and Einstein. Others deal with topics such as "necessity, contingency, and natural law," fate, the role of reason in science, and the role of art in the scientific renaissance. A few of the articles are concerned with provocative historical parallels: Galileo and Oppenheimer, Vico and Descartes, Eudoxus and Plato.
- DE SANTILLANA, Giorgio.** *The Origins Of Scientific Thought, From Anaximander To Proclus, 600 BC To 300 AD*. Chicago Univ Of Chicago Pr 1961.
- Beginning with some speculations on ancient myths and cosmologies as incorporating, in a way that can be decoded, the details of astronomical cycles, and planetary phenomena, this book ranges through Greek scientific thought from the single quotation ascribed to Anaximander to the final three scientific religions, the atomism of Epicurus, Stoicism, and Neoplatonism. The first ten chapters are devoted to the various pre-Socratics, a chapter apiece for Socrates, Plato, and Aristotle follow, and then chapters on mathematics, astronomy, and geography of the Hellenistic period. There are generous quotations from the sources in each chapter.

- A discussion of Fred Sommers' proposal for a new "test of coherence" for ontologies based on a revised theory of types. The theory leads to intolerably counterintuitive

proliferations of senses of terms in natural languages. Its "proof" is shown to rest on the very propositions which the theory is supposed to establish. It presupposes the existence of a well defined set of grammatical but absurd sentence types. This assumption takes two forms. On the first interpretation, it prohibits an individual from turning up in two different categories; on the second interpretation, it amounts to the principle of transitivity of predication. But the first is supposed to be a consequence of the theory, ruling out Strawsonian persons; and the second turns up as a theorem.

DE ST INA, Marie. China's Contribution To The Spiritual Foundation Of Humanity. *Int Phil Quart* 6,445-454 S 66.

DE STRYCKER, Emile. The Unity Of Knowledge And Love In Socrates' Conception Of Virtue. *Int Phil Quart* 6,428-444 S 66.

When the Platonic Socrates is identifying virtue and knowledge, he does not mean a knowledge about a special field or about means to an end, as that of the geometician or the architect, but about human life as a whole and about the ultimate end of human striving. Virtue is a knowledge about the absolute Good and the relativity of other values. Since Good has to do with life as it is lived, not as it is thought about, true knowledge about the Good implies the effective acceptance of its demands, the choice by which I put the higher goods above the lower ones. Therefore the insight that is virtue is both recognition of the objective inequality of values and self-testing in order to see whether one has more "love" for the absolute Good than for any other thing whatever. So virtue is an indissoluble unity of love and knowledge of the Good.

DE TOLLENAERE, M. Aristotle's Definition Of Time. *Int Phil Quart* 1,453-467 S 61.

DE TOLLENAERE, M. Intersubjectivity In J-P Sartre. *Int Phil Quart* 5,203-220 My 65.

The article traces the development of the theory of intersubjectivity in Sartre from *L'Être et le Néant à Critique de la Raison Dialectique*. In the former he took over the Hegelian dialectic of the *An-sich* and the Master and the Slave, with the significant modification that the radical self-identical In-itself phase of being, which is self-consciousness for Hegel, is the brute facticity of unconscious being for Sartre. Thus the primary relationship between conscious persons becomes not that of destination for each other, as in Hegel, but mutual competition, threat, hatred. The insincere practical compromises of apparent friendship, love, etc., are revealed for what they are by the objectifying stare of the "third party," the witness. In his later work, in which he explicitly tries to integrate Marxism into his philosophy, he accords a more positive role to the third person in the formation of the social group. Yet despite all his efforts the basic relation between persons still remains one of mutual coercion with no place for authentic friendship or love.

DE WAELEHNS, Alphonse. Reflections On The Development Of Heidegger: Apropos Of A Recent Book. *Int Phil Quart* 5,475-502 S 65.

After a brief commentary on the monumental new work of William Richardson, *Heidegger: through Phenomenology to Thought*, the author presents his own analysis of the development of Heidegger's thought throughout his works, for the most part agreeing with, but sometimes significantly differing from, that of Richardson. He examines the two points of view of Heidegger, early and late, one considering Being from the point of man, who gives utterance to it, the other considering man from the point of view of Being as primary. Admitting the continuity in Heidegger's own thought, the author questions seriously the philosophical viability of the later point of view. An immanentist account of Being through man, right or wrong, is a consistent philosophical position which can be expressed in human terms; whereas to speak of man from the viewpoint of Being is a task beyond the capacities of man or his language, at least of his philosophical language.

- DE, S. K.** *Sanskrit Poetics As A Study Of Aesthetic*. Berkeley Univ Of Calif Pr 1963. Professor De traces the topics of expression, imagination, aesthetic enjoyment and creation through seventy-nine pages of historical and systematic discussion of Sanskrit poetics. The discussion is somewhat sketchy but always suggestive, its suggestiveness in part deriving from an implicit interplay of Indian and Western traditions, and the author's attempt to see them in a new synthesis. The extensive notes by Edwin Gerow will be helpful to the specialists, and certainly necessary to the rest of us. The prospective reader should not be repelled by the exoticism of the subject: the light it casts is strangely illuminating.
- DEAN, Thomas.** *Post-Theistic Thinking: The Marxist-Christian Dialogue In Radical Perspective*. Philadelphia Temple Univ Pr 1975. Dean focuses on a group of contemporary theologians—Moltmann, Metz and Rahner—who represent a more recent version with their acceptance of many of the criticisms of contemporary Marxists. Their partially secular approach, however, is not thorough enough, as they retain such christian notions as Christ as the ground and goal of history. The author makes the startling contention that the theistic-atheistic polarity within the christian-marxist debate must be transcended by post-theistic thinking which amounts to humanism. In the young Marx, Dean sees this view affirmed and elaborated by contemporary existentialists like Heidegger, Sartre and Merleau-Ponty. In the last part the author claims that humanism fits Marxism and that it does justice to radical Christianity denying as it does the transcendent character of God and affirming man's historicity. Consistent with his humanistic point of view is his conclusion that ultimately Christianity must surrender its role of reconciliation in the future.
- DEANE, Herbert A.** *The Political And Social Ideas Of St Augustine*. NY Columbia Univ Pr 1963. This book presents a carefully documented account of Augustine's views on the nature of man, the distinctions of morality, the basis of property, the role of the state, the duties of citizens, and the relations of church and state. Professor Deane argues that Augustine's basic political conception is that of the state as a necessarily repressive instrument of order, but that this theory long had little influence because of the political history of medieval Europe. It remained for others, especially Hobbes, to revive this somber image of man and society. On the other hand, Deane claims, Augustine's reversal of his early position that the state should not use coercion to suppress heretics exerted far-reaching influence on medieval politics. The author supports his account with frequent quotations from Augustine. The book includes 86 pages of notes, a bibliography, and an index.
- DEANE, Herbert A.** *The Political Ideas Of Harold J Laski*. NY Columbia Univ Pr 1954. This work is a detailed intellectual biography of its subject, exploring chronologically Laski's main ideas "on a series of central problems of modern politics," including the nature of the state and its relation to individuals and groups; the interaction of social and political forces in political institutions; and the clashing claims of the great political systems of the twentieth century. Laski's teaching is seen to fall into five periods, each marked by a major shift in his dominant interest: Pluralist, 1914-24; Fabian, 1925-31; Marxist, 1932-39; Wartime, 1940-45; and Postwar, 1946-50. Close attention is given to Laski's major works in all these periods, and the philosophic arguments supporting them are analyzed, both with regard to his socio-intellectual environment, and to their logical consistency. Personal details are included only when they are needed to illustrate his intellectual development.

Contemporary approaches to the science of communication and control show some striking conceptual parallels with traditional Aristotelian-Thomistic thought and suggest the major themes treated in this study: (a) the intellectual validity and necessity of non-empirical models of the universe, (b) the clarification of traditional concepts of "form" and "in-form-ation" brought by communications theory, (c) the relation of form to the sensible and intelligible species, (d) possible modes of persistence of the individual human psyche as an integral information pattern unified in a systemic whole by the "selfness" manifest in human consciousness. The concepts of "system" and "information" are employed to analyze formal hierarchical relations and evolutionary processes in terms of structural and functional complexity, perception, self-regulation, and consciousness.

- DELAGUNA, Grace A.** *On Existence And The Human World*. New Haven Yale Univ Pr 1966. The basic concern of this work is to re-examine the perennial problem of speculative philosophy by exhibiting the temporal existence of nature and its relation to man and his world. A formulation of a comprehensive metaphysics of nature and man is offered, based on the understanding of human life and culture as both parts of, and as transcending, nature. The early portion of this work is dominated by the concept of evolution, which is used to unify the three types of existence: inorganic, organic and human. All existence involves potentiality and actuality, and although potentialities form an evolutionary hierarchy within an "ideal continuum," each type has a teleonomy of its own. The teleonomy or aim-directedness of the human world is defined by the self-ideal of the person and the superorganic and impersonal transcendent ends of culture. The discussion evolves from a criticism of Kant, Heidegger and existentialist views on freedom, values and the concept of culture, and also through an examination of problems of cultural relativism in the light of social anthropology.
- DELANEY, Cornelius F.** *Mind And Nature: A Study Of The Naturalistic Philosophies Of Cohen*. Notre Dame Notre Dame Univ Pr 1969. The main objective of this study is to examine a strain of American Naturalism that has sought to re-examine the mind-nature dichotomy and offer a view in which mind and nature no longer oppose each other. The concluding chapter is given to a critical comparison of the solution to the problem of the bifurcation of mind and nature.

DEMOS, Raphael. Plato's Philosophy Of Language. *J Phil* 61,595-609 O 64.

This paper is based on the *Cratylus*, although there is occasional reference to other dialogues. In Plato's contrast between the language of the gods and the language of mortals, we may discern something like the contrast between ideal and ordinary language. By names he means terms which have both reference and sense necessarily; such terms are also verbs, for verbs are names of actions and actions are realities; for instance, a blow. The criterion for the identity of names is that they mean the same thing. (2) *Statements*.—unlike names, statements have meaning without necessarily having any reference. A word is a name *only* if what it names exists, whereas a statement may be false. A statement achieves meaning by purely internal criteria as to its composition. (3) *The Structure of Statements*. A statement is not a list of names; it is a unity and has meaning only in its character as a unity. Ryle's view that the terms in a sentence are not independent constituents and that their meaning is contextual is presented. The author concludes that Plato is undecided on this matter.

Practical wisdom *phronesis* involves something more than cognitive meaning. This article attempts to find out, what, according to Aristotle, differentiates practical wisdom from other cognitive attitudes. It is claimed that Aristotle views moral utterances as having both an emotive and an imperative meaning. Hence, his views on ethical sentences anticipated those of Stevenson and Ayer. Yet today, emotive meaning is viewed as excluding cognitive-descriptive meaning; however, for Aristotle these were not contraries. An emotive-imperative meaning also is true or false, also is believed. Thus Aristotle is better compared with Kant. The article concludes with a discussion of man's basic duty—to try to find what his duty is. This, his meta-duty, is problematic; is it by nature or not?

In this book, a Woodbridge Lecture, Professor Dennes assesses the formulations of naturalism given by such philosophers as John Dewey and J E Woodbridge, and finds them open to certain fundamental circularities of argument. The critique centers its attention on the questions of meaning and morals, and in each area seeks to lay bare the 'restriction metaphysics' to which naturalistic explanation is inevitably tied down.

DENTON, David E. *The Language Of Ordinary Experience: Philosophy Of Education*. NY Philosophical Lib 1970.

"Education is first-person experience." But the bias of our culture and language is "sociological-nomothetic," alienating the individual person by emphasis on linear order, explanation, logic, reductionism, atomizing, historical determinism, rationality, verifiability. Following existentialists, we must pass from this sociology (and phenomenology) to ordinary experience with its language—to the "all-at-onceness of lived experience," field relations, metaphorical parallels, organic process, episodic determinism, reasonableness, and personal authentication. Philosophy of education should focus not on discourse but on first-person experience and existential language, and develop its language and conceptual tools accordingly.

DESAN, Wilfrid. *The Tragic Finale: An Essay On The Philosophy Of Jean-Paul Sartre*. Cambridge Harvard Univ Pr 1954.

"This book represents an attempt at a systematic presentation and interpretation of Jean-Paul Sartre's ontology. It is not an historical introduction, nor a search for the origins of Existentialism." It confines itself almost wholly to *L'Être et le néant*, "a difficult book," in which the author finds to Sartre's credit: "sharp dialectic; an entirely new approach to the problem of Nothingness; a penetrating analysis of bad faith, anguish, and desire; an original statement on the possibles; and a defense of freedom which, although extreme, is impressive." Yet Sartre's phenomenological approach, like those of Husserl, Heidegger, and Jaspers, fails to produce "an objective, complete, and general philosophy."

DESHARNAIS, Richard P. A Note: Forgotten Dimension To Medieval Studies. *Delta Epsilon Sigma Bull* 19,21-23 Mr 74.

This article is a sample survey of curricula in medieval institutes which indicates their failure to consider the field of comparative philosophy. By comparing the thought of the Chinese Chu-Hsi (1130-1200) with that of Thomas Aquinas, we see several similarities. It seems appropriate therefore to suggest just such a field to medieval institutes. Students of the area might well appreciate several points of common concern among various peoples in medieval times.

DESHARNAIS, Richard P. Sport, Humor And Philosophy. *Delta Epsilon Sigma Bull* 19,119-121 D 74.

Philosophers are coming around to subjects which truly are, after all, healthy and realistic parts of human life. A consideration of the utility of sport and humor are two such issues worthy of thinkers today. Both are good antidotes to an overly serious age.

DESHARNAIS, Richard P. The Triple Theme In Medieval Philosophy. *Delta Epsilon Sigma Bulletin* 11,129-136 D 66.

If man today is to live an intelligent, purposeful life, he must situate his questioning within the context of perennial philosophy. Medieval thought provides a good general pattern for such a venture since, at one and the same time, it is a type which is open to learning from the past, is concerned with present issues, and is preoccupied with the ultimate destiny of man.

- DEUTSCH, Eliot.** *Studies In Comparative Aesthetics.* Honolulu Univ Pr Of Hawaii 1975. Eliot Deutsch continues to make significant contributions to transcultural understanding in his book. In the first of his three essays, Deutsch focuses on the Indian concept of *rasa*. Analyzing the Chinese notion of *wēn* in the next essay, Deutsch argues that beauty is of the essential being of an art object, not simply a quality characterizing it. Finally, Deutsch contrasts two paintings, one European, the other Chinese, and identifies four levels of meaning he feels must be considered in cross-cultural aesthetic appreciation.
- DEUTSCH, Eliot.** Sri Aurobindo's Interpretation Of Spiritual Experience: A Critique. *Int Phil Quart* 4,581-594 D 64. Sri Aurobindo has put forward a theory of evolution which, on the basis of an interpretation of various kinds of spiritual experience, seeks to show the way to the realization of man in a "life divine." The main lines of his theory are summarized, after which the three most important tenets of his theory are analyzed in terms of their standing as explanatory concepts. Objections are raised to the manner in which some of these principles are employed as causal explanations and suggestions are made as to their actual logical status. The article concludes with a discussion of the requirements that a philosophy of spiritual experience needs to fulfill. The author argues that such a philosophy needs to be taken as a kind of phenomenological art rather than as a science and that it must strive to include its insights within the special disciplines of philosophy by showing what the implications of spiritual experience are for those disciplines.
- DEUTSCH, Eliot.** The Self In Advaita Vedānta. *Int Phil Quart* 6,5-21 Mr 66. The quest for self knowledge is pervasive in Indian thought and is a central concern of Advaita Vedānta—the non-dualistic system expounded primarily by Sankara. The article explicates the Advaitic conception of the self in its two primary dimensions: Self and the empirical self. Arguments used to demonstrate the supreme Self are critically appraised and the various theories which seek to explain the relation that obtains between the supreme Self and the empirical self are examined. The Advaitic analysis of the empirical self is interpreted to be a "phenomenology of consciousness." It is argued that Advaita Vedānta does not so much explain the self as it describes the process by which we come to believe that it exists. The four levels of consciousness identified by Advaita are then analyzed in terms of their respective ontological contexts and epistemological contents.

- DEUTSCHER, Max** and Martin, C B. Remembering. *Phil Rev* 75,161-196 Ap 66. As well as the usual distinctions made between remembering how to do something, remembering that something occurred, and remembering an occurrence or object, there is a distinction to be drawn between two different uses of "remember that." Despite these various distinctions, the uses of "remembers" resemble each other in their requirements of past perception and a subsequent representation of what was perceived or gained by perception. The exception is that in remembering how to do something, the requirement in the present may be that what was learned is done again, rather than represented. A careful examination of all that is required of the causal connection brings to the surface the complex and partly theoretical nature of our commonplace notion of remembering.

- DEWEY, John.** *German Philosophy And Politics.* NY Putnam's 1942.
- DEWEY, John.** *Philosophy, Psychology And Social Practice,* Joseph Ratner (ed). NY Putnam's 1963. Of these eighteen essays, all but two were never published before in book form. Nine of the essays were written very early in Dewey's career, and are thus of historical significance.
- DEWEY, John.** *Problems Of Men.* NY Philosophical Lib 1946. While the book is not new in the sense advertised, it is new in a more significant sense. The problems discussed are critical problems of our day, and the treatment of them is fresh, original, deep-flowing—invariably *bahnbrechend*. This is true of the 1903 essay, "Logical Conditions of a Scientific Treatment of Morality," as it is of the recent ones. To read this book is therefore to experience intellectual renewal, and I can think of no better connotation of the word "new." Nor do I know of any philosophical substitute for the cultural richness and maturity evident page after page. My claim is that the attentive critical reader of these essays, whatever school of philosophy it is to which he is committed, will gain immensely in the range and depth of his knowledge and the sharpness of his thinking.

DEWEY, Robert E and Loftsgordon, Donald. Dante And Martineau: A Report Of Changing Values. *Ethics* 72,41–45 O 61.

The assertion that men change their ordering of values in different historical periods is difficult to document. There are from the past, however, two recorded instances of value ranking which can make some claim to be representative of a particular period, and which may be compared with how persons rank values today. A ranking of vices exists in Dante's fourteenth-century *Divine Comedy* and a ranking of the moral worth of motives is contained in Martineau's *Types of Ethical Theory* (1885). The article reports how 858 students ranked these items and records their differences from Dante and Martineau.

DEWEY, Robert E. Is Academic Freedom Only For Professors? *Nebraska Alumnus* 57,14–16, 25 Ja 61.

Robert M MacIver characterizes academic freedom as "a right claimed by the accredited educator, as teacher and as investigator, to interpret his findings and to communicate his conclusions without being subjected to any interference, molestation, or penalization because these conclusions are unacceptable to some constituted authority within or beyond the institution." Without rejecting this characterization, it is argued that academic freedom is only one form of the right to learn and to express opinion which everyone should have in a democratic society. Thus, there is an important sense in which professors are claiming no special privilege in defending academic freedom.

DEWEY, Robert E. The Future Of Philosophy. *J Phil* 53,187–195 Mr 56.

DEWEY, Robert E. Themes, Issues, And Solutions: A Proposal For Courses In The Humanities. *Journal Of Higher Education* 29,8–12 Ja 58.

One aim of a liberal education is to cultivate the power of reflective evaluation. Current Humanities courses do this poorly. Usually, students take disconnected courses in different departments. Learning is thereby too technical in specific areas and fragmentary. When these defects are recognized, the typical alternative is to read selected classics—again, an unintegrated presentation of material. New courses are needed focusing upon themes, such as freedom and justice. Issues about these themes should be formulated to provoke thought. Major alternative solutions should be presented to give content for thought. Students will then practice reflective evaluation.

DEWEY, Robert E. University Reform And The Life Of The Intellect. *ERM* 3,28–29 O 70. Contemporary universities are urged by the political Left and Right to become spokesmen for their policies. To do so would be a mistake. Universities have four major functions: prepare students vocationally, provide a liberal education, give public service, and do research. Underlying each of these functions is the traditional purpose of a university to preserve, transmit, and increase human knowledge. In short, universities should serve the life of the intellect and not some ideology. Nevertheless, bad teaching is encouraged by the present system of graduate work and specialization. Accordingly, vigorous reforms in teacher preparation and courses are needed.

DHAVAMONY, Mariasusai. Reflections On The 37th Indian Philosophical Congress. *Int Phil Quart* 5,130–147 F 65.

The article raises some epistemological and metaphysical questions arising from the fact that, in an evolving world, man is himself involved in the process, and must see his knowledge of the process from the point which he himself occupies in it. Thus he must ask by what right he retrojects his own present position and experience in descriptions of a pre-human world, and in what sense, ontologically, he "represents" what went before. A theory of vicarious representation is developed. This raises the question of the relativizing of our knowledge, a question answered by an application of the Thomist dictum: *cognitum est in cognoscente per modum cognoscentis*. Since the *cognoscentis* is exercising a consciousness which is itself in process of becoming, the degree of truth of his evolutionary theories depends on the act by which he self-consciously grasps his own being. The conclusion is that evolutionary theory has reached a stage when it cannot be satisfied by purely "objective" description, but must include the historical situation of the observer in its constation of its results.

DIAZ, Janet Winecoff. *The Major Themes Of Existentialism In The Work Of José Ortega Y Gasset*. Chapel Hill Univ Of N Car Pr 1970.

After an examination of the existentialistic ethic in an effort to determine the characteristic preoccupation of the movement, the book concentrates, in its two main

chapters, on "the critical reaction to Ortega" and "the major themes of Ortega." The numerous critics examined, both pro and con, are those who throw some light on the question of whether or not Ortega is an existentialist. The author amasses sufficient evidence from Ortega's own writings to demonstrate convincingly that his major themes—life and its insecurity, individuality and its loss, freedom and its use—are those of existentialism. Although differences do exist, the similarities outweigh them.

DIAZ, Janet Winecoff. *The Major Themes Of Existentialism In The Work Of José Ortega Y Gasset*. Chapel Hill Univ Of N Car Pr 1970.

After an examination of the existentialistic ethic in an effort to determine the characteristic preoccupation of the movement, the book concentrates, in its two main chapters, on "the critical reaction to Ortega" and "the major themes of Ortega." DICKIE, George. *Aesthetics: An Introduction*. Indianapolis Pegasus 1971.

This introduction to aesthetics is divided into five parts. Unlike most books of this kind this one begins with a very brief history of the discipline. The remaining divisions of the text are devoted, respectively, to the aesthetic attitude and its object, present-day theories of art, four contemporary problems in aesthetics and the evaluation of art. The virtues of this text lie in the criticisms the author presents of theories both past and present and his attempt to offer alternatives to the problems which he sees with the current literature in this field. A brief bibliography is included with the text.

DICKIE, George and Mathers, Robert. The Definition Of 'Regional Quality'. *J Phil* 60,465–466 Ag 63.

DICKIE, George. Attitude And Object: Aldrich On The Aesthetic. *J Aes Art Crit* 25,89–92 Fall 66.

DICKIE, George. Beardsley's Phantom Aesthetic Experience. *J Phil* 62,129–135 Mr 65.

Monroe Beardsley maintains that aesthetic experience is experience which is unified and that such experience is caused by unified aesthetic objects. Two things, then, are unified when an aesthetic experience occurs—(1) the aesthetic object which causes the experience and (2) the experience itself. It is argued that Beardsley has not shown experience can be unified and that there is good reason to think the unity perceived in works of art is mistakenly being transferred to experience caused by the works—thus creating a phantom double. It is argued that the aesthetic theory of John Dewey—an important source for Beardsley—is the possible origin of the phantom double. Dewey talks about cases of understanding and noticing aspects of works of art as if they were cases of causing, and uses the term "experience" as if it designates an effect of a kind which can be unified.

DICKIE, George. Bullough And The Concept Of Psychical Distance. *Phil Phenomenol Res* 22,233–238 D 61.

Dickie discusses some misinterpretations and inadequacies of Bullough's view of psychical distance. This is a psychological attitude a spectator takes toward some object, yet psychical distance is not the whole of the aesthetic attitude. It is a necessary and sustaining, but not a sufficient condition of the aesthetic attitude. It is concluded that thinking of actual spatial and temporal distance as a species of the general type psychical distance is incorrect. Psychological and physical characteristics should not be confused. Physical distance may help cause, destroy, or inhibit (depending on the degree) psychological distance, but these two cannot be thought of as things of the same type, differing only in generality.

DICKIE, George. Design And Subject Matter: Fusion And Confusion. *J Phil* 58,233–237 Ap 61.

The author explores the fusion theory of visual design and subject matter, focusing on Monroe Beardsley's analysis. He argues that defenders of the fusion theory have failed to distinguish clearly between the visual design and subject matter, so that in many of the alleged cases of fusion they discuss, they have actually been citing the appropriateness or similarity of part of the depiction to the whole depiction.

DICKIE, George. Is Psychology Relevant To Aesthetics? *Phil Rev* 71,285–302 JI 62.

Dickie argues that the methods and findings of experimental psychology are not relevant to aesthetics. He considers psychological "meaning" tests and tests for preferences, among others, and concludes that such techniques cannot help us solve logical problems in aesthetics, and cannot contribute towards a description of aesthetic experience.

DICKS, D R. *Early Greek Astronomy To Aristotle.* Ithaca NY Cornell Univ Pr 1970. This is the first volume of a projected two volume treatment of Greek astronomy. It is concerned to trace the development of astronomy as a science, rather than that of cosmology or cosmogony. Plato, whose importance in the development of Greek astronomy is commonly underestimated, and Eudoxus are treated at greater length, and more attention is paid to such topics as the origin of the constellations and the influence of Babylonian astronomy on that of the Greeks. The volume ends with a chapter on Callippus and Aristotle.

DIESING, Paul. *Patterns Of Discovery In The Social Sciences.* Chicago Aldine-Atherton 1971.

This book is a detailed and systematic report on the full range of methods of discovery in the social sciences as they are actually practiced. The approach is "anthropological": "there are as many methods as there are distinguishable communities of scientists, and the boundaries of each method are these of the community that uses it." Accordingly, the first Part deals with "Formal Methods and Theories," The Second with "Participant—Observer and Clinical Methods."

DIESING, Paul. *Reason In Society: Five Types Of Decisions And Their Social Conditions.* Urbana 1962.

Criticizing the narrow identification of rationality with efficiency, Professor Diesing distinguishes five kinds of rationality, with features sufficiently varying to be embodied in different organization types, and to produce different methods of making decisions. His treatment of each includes delineation of historical trend, analysis of conditions of appropriateness, and assessment of scope and value. The concluding chapter treats of reason in general, in terms of the overall concept of order, with the rationality types as different forms of order. The creative element in order is interestingly elicited in relation to different types of historical philosophies.

DIETZE, Gottfried. *Two Concepts Of The Rule Of Law.* Indianapolis Liberty Fund 1973.

DIETZE, Gottfried. Will The Presidency Incite Assassination? *Ethics* 76,14-32 O 65.

The potential for assassination of an American president can perhaps be lessened if reforms are made in the presidency itself. The presidency was originally designed to be limited in power, but an aggrandizement of its role has occurred. This increase in the power of the president runs counter to a strong American tradition and ideology and invites an extra-legal, rebellious response. A restriction of presidential powers might decrease the likelihood of assassination.

DILLEY, Frank B. *Metaphysics And Religious Language.* NY Columbia Univ Pr 1964.

A lucid defense of religious metaphysics by a philosopher. Although Dilley does not defend a particular metaphysics, he develops at length a basically Whiteheadian theory of the nature of metaphysics. He considers various recent attacks on metaphysics and argues that metaphysical disputes are factual. Naturalists are described as precluding all non-naturalist metaphysics by methodological decision. A theistic claim, Dilley says, is a factual hypothesis too, though even more difficult to establish than other metaphysical claims. The function of symbols of transcendence, in theistic metaphysics, in particular the use of analogy and paradox, is treated in detail. These symbols are considered essential and yet in need of constant rational criticism. He concludes that "metaphysical systems are elaborate and criticized extensions of faith," and any adequate metaphysics must contain in some form an appeal to revelation as well as to reason and experience.

DILLEY, Frank B. Is There 'Knowledge' Of God? *Journal Of Religion* 38,116-126 Ap 58.

This article is a comparison of Paul Tillich, Martin Buber and Edmond Cherbonnier on the question of whether God's nature can be known and described in literal language. The author claims that Buber implies, but does not admit, knowledge of a

personal God and, using Cherbonnier's biblical philosophy, defends the concept of a personal God against Tillich's criticisms.

DILLEY, Frank B. The Irrefutability Of Belief Systems. *J Amer Acad Relig* 43,214-223 Je 75.

Belief systems, whether theistic or naturalistic, are irrefutable in that well-developed belief systems have within their basic categories of explanation and epistemology resources to handle all "apparently" intractable facts and arguments. None of the kinds of events that anyone expects to occur need overthrow basic belief systems because each system survives as a viable system precisely because it has shown its ability to cope with the facts. "Facts" are seen perspectively, for one thing. For another, the final verdict on where history is going is not yet in.

DILLON, John. *The Middle Platonists: 80 BC To AD 220.* Ithaca NY Cornell Univ Pr 1977.

The article covers the development of Platonism during last century B. C. and first two centuries A. D., laying stress on growth of scholastic doctrines and formulations, and attempting to clarify the contributions of individual philosophers, such as Antiochus of Ascalon, Eudorus of Alexandria, Plutarch, Albinus and Numenius. The whole period is important as providing background for Plotinus and Neoplatonism. The existence of such entities as the Platonic Academy and the School of Gaius are questioned, and the problems of orthodoxy, eclecticism, and lines of influence in general are dealt with extensively.

DILMAN, Ilham and Phillips, D Z. *Sense And Delusion.* NY Humanities Pr 1971.

The alternate chapters of the book, written specifically by the authors in turn, form a kind of dialogue, although not a very contentious dialogue, between them. The chief problems are how one can pass the judgment on another man's life that it was meaningless, or come to recognize this of one's own past life and what the nature is of moral self-deception. They are illustrated in particular by a detailed consideration of parts of Tolstoy's novel, *The Death of Ivan Ilych*.

DIRENZO, Gordon J (ed). *Concepts, Theory And Explanation In The Behavioral Sciences.* NY Random House 1966.

This volume is concerned mainly with the nature and problems of theoretical explanation for human behavior and the world of sociocultural reality, with more attention devoted to the former than to the latter. In this it is faithful to the general American orientation. The main topics of consideration are conceptual definition in behavioral sciences, individual-group relationships, models, explanation, culture, intrapersonal, and measurement. An interesting attempt is made to begin theoretical analysis with "psychological-mindedness," defined concepts as opposed to operational definitions. Issues discussed in the final chapter have relevance beyond the behavioral sciences.

DOAN, Frank M. On The Construction Of Whitehead's Metaphysical Language. *Rev Metaph* 13,605-622 Je 60.

Examining Whitehead's redesigned metaphysical language, the author first argues that its apparent lack of a formal syntactic structure throws its validity into question. Then, reconstructing Whitehead's method, he contends that his categories do not constitute the ground of a precise language. He further submits that Whitehead's metaphysical language appears to be both descriptive and constitutive of reality. The author then examines Whitehead's concept of creativity in the context of his distinction between appearance and reality. Finally, he argues that Whitehead's metaphysical sentences do not satisfy the minimal requirements of confirmability and convey at best poetic attitudes and moods.

DOAN, Frank M. On The Organizational Base Of Language With Special Reference To Mathematical Models. *Phil Phenomenol Res* 21,239-247 D 60.

Is the organizational base of language ultimately an extra linguistic one? The author thinks that language must have an intrinsic value; conceptual structures are not merely an expression of the integration of personality. Symbols must be allowed to satisfy the conditions for description and explanation. The base of an ideal

- language remains at the level of its symbols. The cognitive power resides in the symbols and not in an extralinguistic principle.

- DOHERTY, Kevin F.** The Location Of The Platonic Ideas. *Rev Metaph* 14,57-72 S 60.
- The author argues that post-Platonic writers were to some degree logically justified by parts of the Platonic text when they integrated the separate Ideas into the Supreme Intellect. To establish this thesis, he discusses the centrality of divine imitation in Plato's paideia and reviews the Thomistic view of Plato and the divine archetype. He then considers John Wild's position on conceptual immanence and Lutoslawski's and Taylor's views on paradigmatic unity in Plato. Finally, he maintains that Plato's Supreme Intellect, the Demiurge, cannot be equated with the World Soul but remains transcendent.

- DONCEEL, Joseph F.** Teilhard De Chardin: Scientist Or Philosopher? *Int Phil Quart* 5,248-266 My 65.
- In the process of evolution, a double level of causality is at work, the level of efficient causality and the level of formal causality. To the former corresponds the scientific, to the latter the philosophical explanation of evolution. In his earlier writings Teilhard distinguished these two levels. In his later publications, he gives up the distinction and he urges the scientist to consider both of them and to combine both explanations. The article tries to show why Teilhard's earlier position is preferable. Nevertheless, a complete explanation of evolution is impossible without taking both levels into account. The scientific and the philosophical explanation of evolution imply each other; they stand to each other like the determined to the determining element, like body to soul. Both are always used implicitly, it is advisable that both be used also explicitly. This, however, is the task not of the scientist as such, but of the philosopher, or of the scientist speaking as a philosopher.

- DONDEYNE, Albert.** *Faith And The World.* Pittsburgh Duquesne Univ Pr 1963.
- Within the context of the recognition that modern philosophers have provided us with the most perceptive and valid analysis of our present world-structure, the author

examines the meaning of history and the role of politics as these are understood within the "dialogue or conversation of the Christian believer with the present middle twentieth-century world." Disavowing the "homesickness for the past" that is typical of Christians, the author suggests that the mission of Christianity is as "a living witnessing in the service of the supreme liberating realities." Since new social and political realities have formed and are still in the process of formation, the author looks to the new Christian structuring as offering new possibilities for future faith.

DONNELLAN, Keith S. Knowing What I Am Doing. *J Phil* 60,401-409 Jl 63.

Several writers have said that one's intentional actions are known to one without observation. Since it is important to see to what pattern knowledge of our intentional actions is being assigned, two sets of paradigms of knowledge without observation are considered. These are (1) knowledge of one's own pain and (2) knowledge of the position of one's limbs. Each seems to exhibit one of the features of intentional actions. Yet the case of intentional actions does not seem to fit into either of these two sorts of paradigms. It seems rather to be a special (and mysterious) case in its own right.

DONNELLAN, Keith S. Necessity And Criteria. *J Phil* 59,647-657 O 62.

This paper questions C I Lewis's idea that there is between terms a pre-existing relationship among their criteria of application (inclusion being the simplest case) which determines the necessity of certain propositions into which they enter and which allows us a basis for awareness of necessity. It examines two cases in which it seems dubious whether we can speak of this relation as holding prior to our acceptance of a statement as necessarily true. In one, the inclusion seems to arise as a result of learning the necessary truth; in the other, knowledge of the necessary truth seems to be a prerequisite for understanding the terms involved.

DONNELLAN, Keith S. Reference And Definite Descriptions. *Phil Rev* 75,281-304 Jl 66.

A distinction is developed between two uses of definite descriptions, the "attributive" and the "referential." The distinction exists even in the same sentence. Several criteria are given for making the distinction. It is suggested that both Russell's and Strawson's theories fail to deal with this distinction, although some of the things Russell says about genuine proper names can be said about the referential use of definite descriptions. It is argued that the presupposition or implication that something fits the description, present in both uses, has a different genesis depending upon whether the description is used referentially or attributively. This distinction in use seems not to depend upon any syntactic or semantic ambiguity. It is also suggested that there is a distinction between what is here called "referring" and what Russell defines as denoting. Definite descriptions may denote something, according to his definition, whether used attributively or referentially.

DONOSO, Antón. Stalin's Contribution To Soviet Philosophy. *Int Phil Quart* 5,267-303 My 65.

As a result of the extreme form of the cult of Stalin's personality in the USSR, especially from 1930 onward, it was inevitable that Stalin should influence profoundly Soviet Marxism. Indeed, the history of philosophy in the Soviet Union during those years was largely the history of Stalin's "philosophical" activities. It is the purpose of this study to present an account of these activities to examine any significant contribution made by them to Soviet Dialectical Materialism, and, finally, to attempt to determine how the so-called "de-Stalinization" has affected this contribution in respect to the contents of selected, current Soviet philosophy textbooks. Stalin's main contributions concern the concept of "revolution from above" and the proposal that an aspect of society could belong neither to the basis nor superstructure. His capabilities were along the lines of a practical politician who justified, *ex post facto*, in theory, what he had already accomplished *de facto*. Since his expose Soviet textbooks have either completely ignored him or cautiously and/or critically quoted him.

DOOYEWEERD, Herman. *In The Twilight Of Western Thought; Studies In The Pretended Autonomy Of Philosophical Thought.* Philadelphia Presby & Reformed 1960.

The author defends "the philosophy of the cosmonomic idea." He attacks the autonomy of theoretical thought maintaining (like Calvin) that man's pre-theoretical commitments determine his philosophical thought. Christian philosophy alone he claims can be "critical" and non-Christian. Philosophies are all ultimately "dogmatic," and presuppose their own religious assumptions.

DORAN, Madeleine. The 'Credulity' Of The Elizabethans. *J Hist Ideas* 1,151-176 Ap 40.

DORE, Clement. On A Theory Of The Justification Of Ethical Principles. *Phil Stud* 15,81-84 1964.

Richard Brandt has written that "there is a point in comparing the role of feelings... in ethics with the role of observation in science." In this article it is pointed out that if Brandt is holding that having certain feelings is a logically necessary condition of A believing P then Brandt's comparison of feelings in ethics to the role of observation in science is imperfect—for A's noticing that he no longer has certain feelings would be the same thing as his noticing that he no longer believes P. The author argues that the scientist's observations may very well cause him to disbelieve the hypothesis, but we cannot say that, in making his observations, he is *ipso facto* discovering that he disbelieves the hypothesis.

DORE, Clement. Seeming To See. *Amer Phil Quart* 2,312-318 O 65.

Until recently, many philosophers believed that there is a certain state—frequently called "sensing a sense-datum"—the existence of which is logically necessary for the perception of any object. Nowadays, this position is commonly rejected. Professor Ryle, for example, has argued that there is no locution which is characteristically employed to report such a state and that we are therefore without the needed marks of our being conscious of it. As against Ryle, I argue that it is far from obvious that locutions such as "I seem to see..." are not commonly used to report the state in question. In the course of my argument I consider and reject a number of analyses of "... seem(s) to perceive..." which entail that it is false or nonsensical to say that seeming to perceive is logically necessary for perception.

DORMAN, Neil A. The Refutation Of The Generalization Argument. *Ethics* 74,150-154 Ja 64.

Marcus Singer's deduction of the generalization argument in *Generalization in Ethics* is not sound. The argument itself is invalid, but there is a valid moral principle which is very similar to the one Singer thinks he has proved. This valid principle is that if the consequences of not having a rule against X would be undesirable, then there should be a rule against X. But this is not the same as to say that if the consequences of everyone's doing X are undesirable, then each person is obligated not to do X.

DOUBROVSKY, J S. Existence And Symbol. *Phil Phenomenol Res* 21,229-238 D 60.

The influence of psychoanalysis on the nature and function of symbols is discussed. It is shown how the objective value of qualities is explained away by the theory of emotional projection of the ego into things. The presupposition here is that symbols are really negated and discarded, since they stand in the way of knowledge. The author feels that symbols have to be understood in their own world, not the world of science, but that of existence. It is suggested that Sartre restored symbolism to its originary prelogical level; a symbol here is revelatory of existence or man's being in the world. Our symbolic world is the real world; science is built on this. It is concluded that certain symbolic themes or patterns throughout human history show the human condition, which determines some fundamental situations (common to all man), which are transhistorical. One cannot do away with symbols.

DOUGHERTY, Jude P. Lessons From The History Of Science And Technology. *Stud Phil Hist Phil* 4,34-50 1967.

This article takes cognizance of recent work in the history of science and technology to argue against those who defend a positivistic interpretation of science on the ground that history supports their view. The positivist will frequently argue that the success of his own view in vanquishing an ecclesiastically oriented philosophy in the Middle Ages was responsible for the birth of modern science. He may also argue that modern science is basically Pythagorean in spirit and that modern science emerged rapidly out of the Renaissance because it revived certain classical modes of thought opposed to the Aristotelianism of the Middle Ages. I argue that both of these theories are incorrect in the light of recent work in the history of science.

DOUGHERTY, Jude P. Randall's Notion Of Substance. *Proc Cath Phil Ass* 36,91-101 1962.

Vital to an understanding of Randall's metaphysics is his analysis of substance as a "cooperation of processes." It is in the light of his doctrine on substance that his observations on logic, psychology, aesthetics and history are to be understood. This paper examines Randall's notion of substance, together with some of its implications and then offers a criticism of it in terms of its stated objectives and from the vantage point of an Aristotelian metaphysics. Randall's use of concepts such as "form," "structure," "situation," "encountering," and "function" are also examined.

DOUGHERTY, Jude P. The Metaphysical Roots Of Contemporary Restlessness. *Proc Cath Phil Ass* 37,187-195 1963.

There is evidence that the absence of a "way of thinking about things" is fairly widespread, that the scepticism with respect to values present in the universities for generations has finally reached the common man who is no longer in possession of the moral certainties which motivated his immediate forebears. There is further evidence that this uncertainty with respect to values has had its effects in the social order where it has produced a kind of anxiety detected by sociologists and psychologists, as well as by novelists. It can be argued that this uncertainty, or moral relativism, is ultimately due to a mistake in thinking about certain metaphysical issues such as nature, ends and change.

DOUGHERTY, Jude. Recent Developments In Naturalistic Ethics. *Proc Cath Phil Ass* 33,97-108 1959.

This is a survey of contemporary American naturalism with particular reference to recent developments in naturalistic ethics. Though all naturalists would answer affirmatively the question, "Is a scientific treatment of morality possible," not all would use the term "scientific" in the same sense. The problem of verifying a normative hypothesis, and the role of science in ethics is examined. It is argued that the naturalist fails to grasp the manner in which we discover values and that his narrow conception of nature places unnecessary constraints upon his value theory.

DOW, Helen J. Van Gogh Both Prometheus And Jupiter. *J Aes Art Crit* 22,269-288 Spr 64.

Van Gogh's voluminous collection of letters employs images very similar to those of his paintings, images which when examined against the context of his personal life, become highly revealing parables of his own philosophical problems. The Biblical opposites of the Sower and the Reaper, for example, are analogies to the Creator on a human as well as a divine level. The Sower is also the Reaper, however, an ambiguity which especially identifies the real cause of Van Gogh's mental breakdown, his agonizing uncertainty about religion.

DOWNES, Chauncey B. Some Problems Concerning Dewey's View Of Reason. *J Phil* 58,121-136 Mr 61.

The author examines Dewey's account of reason, with emphasis on his ideas of mathematics and logic and on his theory of value. Despite the usual contention that a conception of reason as a form of experience, activity, and inquiry is weakest in dealing with purely formal modes, the author finds that Dewey does quite well in this area. In the realm of value theory, however, the author faults Dewey's account for its dependence on behavioristic psychology.

DOWNES, Chauncey. Husserl And The Coherence Of The Other Minds Problem. *Phil Phenomenol Res* 26,253-259 D 65.

In stating the problem of other minds it is assumed that self-knowledge is possible but the existence of others is dubious. Stating the problem is incoherent because a conceptual framework is accepted in terms of which the problem cannot be solved. "Starting from one's own case," in the Cartesian tradition, creates a pseudo-problem. Husserl attacks this tradition, but by investigating the structure of the transcendental ego, seems to be in the tradition. Downes argues that this is not so, and that Husserl's careful distinction between the naturalistic and the transcendental enables him to avoid incoherence in his treatment of other minds. It is concluded that the problem is a sign of theoretical confusion: at the foundation of the philosophy of the person, and can only be corrected by an emphasis on intentionality.

DOWNES, Chauncey. On Husserl's Approach To Necessary Truth. *Monist* 49,87-106 Ja 65.

This paper investigates certain aspects of Husserl's use of *a priori* in connection with some of the work of Carnap and Quine concerning necessary truth. It is argued that Husserl's position is substantially similar to the agreements issuing from the Carnap-Quine controversies. This contention is illustrated from Husserl's *Cartesian Meditations* and *Logical Investigations*. These illustrations and the general argument claim to show that Husserl's position is correct as regards the area toward which philosophical attention should be directed, and is quite closely related to concerns of contemporary linguistic analysis. The illustrations and the argument also purport to show that Husserl's method is defective, and that the techniques of contemporary linguistic analysis are more appropriate to the concept of philosophy shared by Husserl and linguistic analysts.

DUDGEON, Theodore. The Paradox Of The Non-Communicator. *Phil Stud* 15,92-96 1964.

The article advances the position that any theory, such as Russell's Theory of Types, that purports to avoid the paradox of the liar runs up against the paradox of the non-communicator and is thereby proved false or inadequate. The author takes up five possible objections to his view, arguing that only theories which take the "levels of language" approach are potentially capable of avoiding the semantical paradoxes, but can do so only with the result that the sentences containing the paradoxes turn out to be meaningless. Thus, he argues, avoiding the contradiction associated with the liar unavoidably leads to the contradiction associated with the non-communicator.

DRAPER, Hal. *Karl Marx's Theory Of Revolution*. NY Monthly Review Pr 1976.

This work presents and explains Marx's views and theories as they were formed and shaped through his (and Engels') experience with and critical reflections upon the political character of society, state, classes, power and eventual "communism." Book 1 traces the historical development and background of Marx's political theories, policies and practices. Book 2 presents the specific analyses and critiques Marx made

of Louis Napoleon, Bismarck and the notion and role of class in pre-capitalist society(ies). Marx's writings on Czarist Russia, Spain, Germany, France, Asia and Africa clarify his concepts of bureaucracy, pre-capitalist autonomous States and the industrial development of the bourgeois class. Throughout the different yet related complementary work of Marx and Engels is examined.

DRAY, William H. *Philosophy Of History*. Englewood Cliffs NJ Prentice-Hall 1964. Professor Dray divides the philosophy of history into a critical part and a speculative part. Under the first heading, he discusses positivistic and idealistic theories as they bear on problems of historical explanation and description. Under the second heading, he discusses some of the leading varieties of speculation on history and devotes a chapter each to Hegel, Toynbee, and Reinhold Niebuhr.

DRAY, William. Professor Child On Neo-Positivism And History. *J Phil* 59,100-105 F 62.

Professor Arthur Child presents three arguments designed to show the inadequacy of what he calls the "neo-positivist" theory of explanation in history. The first draws attention to the field of natural history wherein deviations from neo-positivist claims are found to exist with regard both to the subject and the value of the explanation. The second concerns the neo-positivist thesis that deducibility is a sufficient condition of giving an explanation: The third concerns Professor Popper's claim that the truth of laws, even when not stated, is implicit in the explanations historians give. This note expresses misgivings about these arguments and suggests how a neo-positivist might attempt a rebuttal to each.

DRAY, William. R G Collingwood On Reflective Thought. *J Phil* 57,157-162 Mr 60.

The author attempts to show how Collingwood reached his overly intellectualistic conception of human action. In his proof that the thought which the historian must re-think in order to explain an action will necessarily be a reflective one, Collingwood used a sense of "reflection" which is innocuous. However, the author claims, he then went on to apply his conclusion in a way which illegitimately assumes a sense of "reflection" which makes this conclusion both false and inconsistent with other of his quite acceptable theses.

DREISBACH, Donald F. Paul Tillich's Doctrine Of Religious Symbols. *Encounter* 37,326-343 Autumn 76.

Tillich claims that through symbols God or being itself is made manifest as a knowable object of ultimate concern. He argues that there is an ontological relation between all beings and being itself, but he gives several different and conflicting accounts of how a potential symbol is transformed into an actual one. I restate and strengthen Tillich's arguments, and argue that one of his accounts is far better than the others. Although the correctness of Tillich's position cannot be demonstrated, it can be made plausible, and that is all that can reasonably be expected of it.

DREISBACH, Donald F. Paul Tillich's Hermeneutic. *J Amer Acad Relig* 43,84-94 Mr 75. My purpose is to clarify Tillich's method of interpreting religious symbols. The issue is whether he thinks interpretation to be, as William Rowe argues, the translation of symbols into less—or non-symbolic terms. I argue that such translation is impossible, and that for Tillich interpretation of symbols means explaining, in a non-symbolic way, how symbols, as manifestations of being itself, provide solutions to the fundamental problems of human existence. This interpretation is guided by objective knowledge of the structure of being, not of being itself.

DRETSKE, Fred I. *Seeing And Knowing*. Chicago Univ Of Chicago Pr 1969.

DRETSKE, Fred I. Moving Backward In Time. *Phil Rev* 71,94-98 Ja 62.

Dretske criticizes Bernard Mayo's argument that we can move backward in time ("Objects, Events, and Complementarity," *Philosophical Review*, Volume 70, Pages 340-61). Mayo argued that since revisiting a stationary object is a move backward in space, revisiting an occurring event ought to count as a move backward in time. The problem is that Mayo's examples of propagating disturbances are not occurring events; they are at different places at different times, and to count as occurring events they would have to be at different places at the same time.

DRETSKE, Fred I. Observational Terms. *Phil Rev* 73,25-42 Ja 64.

Dretske tries to clarify what it means to call something an observable by examining a sense of the verb "to see" which approximates the more technical locution "to observe." This use of "to see" operates against the background of the speaker's "S-beliefs," which concern the conditions required for reliably detecting, merely by looking, that which one claims to see. Because the scientist's experience gives him a different set of S-beliefs from those of the layman, he can be said to see what the layman cannot. There is no upper limit, Dretske concludes, to what people can see, and by the same token there is no upper limit to the observational vocabulary of science.

DRETSKE, Fred I. Particular Reidentification. *Phil Sci* 31,133-142 Ap 64.

DRETSKE, Fred I. Particulars And The Relational Theory Of Time. *Phil Rev* 70,447-469 O 61.

Dretske considers the theory that any temporal statement can be reformulated in a tense-free idiom where relations comprise the only means of temporal determination, and where the entities which are said to have these temporal relations are particulars. This approach, he argues, tends to make the difference between space and time a

mere difference between the relations which particulars exemplify. But there is actually a more fundamental difference involved—in the sorts of entities that exemplify spatial and temporal relations. Dretske concludes that tensed predication cannot be adequately replaced by something simpler in relational idioms.

DRYER, D P. The Concept Of Existence In Kant. *Monist* 50,17-33 Ja 66.

Kant does not accept Russell's view that existential judgments differ from others in logical form, viz., that they are negations of universal judgments. Nor does Kant maintain that "existence is not a predicate." Kant points out that an existential judgment is synthetic; it ascribes to certain things a predicate not thought in the concept of them. It differs from other synthetic judgments in that its predicate is not a "real" predicate; it does not enlarge the concept of the things to which it is ascribed; for it does not assert that things to which that concept applies have some further determination. Instead, an existential judgment is equivalent to asserting that things exist to which that concept applies. Yet Kant does not accept either the view that an existential judgment is about a concept or that it asserts of a concept that it has application.

DUBAY, Thomas. *Philosophy Of The State As Educator*. Wisconsin Bruce 1959.

This work "seeks to explore the functions of the (state)... in the field of education." It does this from a perspective that is philosophical insofar as the exploration proceeds out of an "analysis of the nature and functions of the state." From a natural law position the role of the state is presented as a preliminary to the theoretical consideration of the state as educator. On a practical level, however, since it is recognized that the decisions of the state concretely affect the person and his religion and morality, the author presents the norm of justice which ought to be the foundation for the state's control of education. A final section is concerned with the duties of the state toward itself and the common good.

- Paranormal phenomena are defined as conflicting with one or more of the "basic limiting principles" which are taken for granted. Examples are given: Thoughts (mental events) occurring in a person B can be known by another person A only through physical signs of them; however, telepathy is an exception. An event which at a given time has not occurred cannot be perceived at that time; however, pre-cognition is an exception, then several theories of perception are examined and a representative theory is favored over a phenomenalistic one. The nature of human personality is examined and no definite conclusion is reached regarding the possibility of the human personality surviving bodily death.

- DUCASSE, C J.** Causation: Perceivable: Or Only Inferred? *Phil Phenomenol Res* 26,173–179 D 65.
- In theoretical physics causation is the relation between any total state A of an isolated theoretical system S at a time T_1 and its total state B at any later time T_2 ; S being such as to make equally possible inference of B from A, and of A from B. Since concepts are not perceivable, there is no causality among matters of fact. The physicist's definition of cause and effect is inapplicable to mental events. In the common verbs of causation, to bend, to remind, etc., causation is the triadic relation between a state of affairs S and only two changes in it: one, C, at a time T_1 ; the other, E, at a time T_2 . This relation between perceivable events C and E is itself perceivable. It obtains in any experiment whether by man or by Nature.

- DUCASSE, C J.** Concerning Berofsky's "Causality And General Laws". *J Phil* 63,524–527 S 66.
- Berofsky's "Humean" theory of causality leaves undefined his distinction between laws and general laws, and his key terms "law," "lawlike," "lawful." His criticisms of Ducasse's "Causation: Perceivable? or only Inferred?" rest on incorrect statements of what Ducasse argues; for instance that what Ducasse contends is perceivable is that "C is the cause of e in S." But Berofsky's using in this phrase the present-indefinite tense of the verb automatically makes it mean "causes at any time," i.e., always; whereas what Ducasse contends is that causation of e in S by c is perceivable in some individual concrete cases.

- DUCASSE, C J.** Critique Of Hume's Conception Of Causality. *J Phil* 63,141–148 Mr 66.
- The only definition of causality Hume offers, consistent with his professed empiricism, is a sequence observed to have been regular. His other definitions of causality, and of necessity among matters of fact, all employ verbs of causation such as "produces," "conveys," "propensity," and are therefore circular. Hume's assertion, that causation may be detected by a single experiment, is incompatible with his definition of causality. His "Rules by which to judge of causes and effects" experimentally are not in fact this, but are rules for generalizing a causal connection if, somehow, one has already observed it. Hume both contends that connection between cause and effect is never observable, and acknowledges that he has no idea of what he means by such "connection." Hume's definition of causality as regularity of sequence is invalidated by the fact that some regular sequences are patently non-causal.

- DUCLOW, Donald F.** Gregory Of Nyssa And Nicholas Of Cusa: Infinity, Anthropology And The Via Negativa. *Downside Review* 92,102–108 Ap 74.
- For Gregory and Cusanus, the concept of infinity links the "via negativa" to an anthropology of the limit-situation. There is no possible proportion between the finite and infinite, and the "via negativa" articulates this incommensurability. While thus assuring the transcendence of the divine nature, this interpretation simultaneously transforms the approach to God (both speculatively and affectively) into an infinite progress. For, as "image of God," man dwells within the limit of the finite and infinite. Although actually finite, man possesses both the concept of infinity

- and the capacity for unlimited assimilation to the transcendent God, whose infinity is approachable without limit.
- DUCLOW, Donald F.** Structure And Meaning In Anselm's 'De Veritate'. *Benedictine Review* 26,406-417 D 75.
- This essay examines Anselm's methodology and view of truth. "De Veritate" proceeds in a twofold Augustinian fashion: by movement from the exterior to the interior of the question of truth; and by a progressive circularity, which is linked to Anselm's insistence on faith seeking understanding. By thinking truth as rectitude, Anselm sees truth as both theoretical and practical. Truth is a mode of acting and being, as well as of thinking and speaking. Finally, rectitude indicates the integration of man's act of existence, or the restoration of man to his original wholeness as "image of God."

- "This study of the nature of poetry," according to its author, "is not undertaken from a literary—that is, a creative and critical—standpoint. It is an attempt to outline the essence of poetry from a metaphysical and psychological approach." The book is in three main parts, treating respectively of the nature of beauty, the nature of a fine art, and the nature of poetry. He concerns himself with Thomistic principles, and discusses the nature of beauty, fine art, and poetry; his Thomistic principles which consist of a few scattered remarks made by St Thomas in the course of discussions of other subjects.

- DUMONT, Richard E.** The Role Of The Phantasm In The Psychology Of Duns Scotus. *Monist* 49,617-633 O 65.
- Duns Scotus is solidly entrenched within the Aristotelian tradition in adopting the sensorial phantasm as the substrate from which concepts are abstracted. This does not deter him from insisting on theological grounds that the intellect's utilization of such sensorial phenomena is merely incidental. The normal province of the intellect excludes the sensible. By contrasting the phantasm with the concept, Scotus underlines the transcendence of thought over sentience.
- DUNAYEVSKAYA, Raya.** *Marxism And Freedom, From 1776 Until Today*. NY Bookman 1958.
- The purpose of the work is to relate practice to theory, beginning with the Age of Revolutions in the 18th century—industrial, political, social, intellectual—and the philosophy of Hegel, through the Civil War in the United States and the Paris Commune and the dialectics of liberation of Marx, to the 1917 Russian Revolution and its relationship to Lenin's Philosophic Notebooks. The Stalinist break with Marx's dialectic structure of Capital is then related to Stalin's transformation into opposite of a workers' state into what the author calls a state-capitalist society. The new pages of freedom opened by the revolts in East Europe against Russian domination and for "socialism with a human face" is related to the American roots of Marxism: "Toward a New Unity of Theory and Practice in the Abolitionist and Marxist Tradition."
- DUNAYEVSKAYA, Raya.** *Philosophy And Revolution: From Hegel To Sartre, And From Marx To Mao*. NY Delacorte Pr 1973.
- Part I, "Why Hegel, Why Now?", discloses the scope of the entire work. The relevance of both Hegel's Phenomenology of Mind, Science of Logic, Philosophy of Mind and Marx's Historical Materialism, in both his economic and philosophic works, is related to Lenin's Philosophic Notebooks as theoretic preparation for the Russian Revolution. The todayness of the Hegelian Marxian dialectic is contrasted in Part II, "Alternatives," to Sartre's Existentialism as well as to theories of Leon Trotsky and Mao Tse-tung. Because the author considers that the concept, "Absolute Negativity as New Beginning," is both the conclusion to be drawn from Hegel's philosophy and the actual foundation for analysis of the present, the concluding Part III, "Economic Reality and the Dialectics of Liberation," analyzes the 1960 revolts in East Europe, Africa, and America.

DUNNER, Joseph. *Baruch Spinoza And Western Democracy: An Interpretation Of His Philosophical, Religious, And Political Thought.* NY Philosophical Lib 1955.

After a brief review of Spinoza's life, the author discusses Spinoza's metaphysical views on substance, cause, and attribute, his rejection of Cartesian dualism and his development of a theory of unique substance, his theory of freedom, and the political implications of his metaphysics. There follows a fuller recapitulation of Spinoza's God-concept and a brief section presenting his political thought as the essential interest of his life. Finally the author indicates what he conceives to be the value of the study of Spinoza's thought for this century, namely as a bulwark against communism and as one of the foundational statements of the democratic tradition.

DUPRÉ, Louis K. *Contraception And Catholics: A New Appraisal.* Baltimore Helicon Pr 1964.

DUPRÉ, Louis K. *Transcendent Selfhood: The Loss And Rediscovery Of The Inner Life.* NY Seabury Pr 1976.

Contending that the crisis of Western culture is a result of the loss of the recognition of the transcendence of the self, also called "the inner life," Dupré pursues a hermeneutic approach in his effort to rediscover transcendence. Although holding that the sacred is no longer a primary category of transcendence, he describes the effort "as a critical reflection on... 'the Judeo-Christian' religious tradition," with "little concern for systematic unity or completeness... (and) no pretense of presenting a comprehensive theory...."

DUPRÉ, Louis. *Kierkegaard As Theologian: The Dialectic Of Christian Existence.* NY Sheed & Ward 1963.

After a brief account of Kierkegaard's early life with special emphasis on those episodes which were to influence his later life and thought, the author proceeds to examine the concepts on which Kierkegaard's theology mainly rests. Among these are man's consciousness of sin and the feelings of guilt which accompany this awareness; the individual's suffering and despair which make him receptive to God's grace; and the faith by which the individual accepts God the Son as the means of Salvation. A chapter on "the ethics of faith" and one on Kierkegaard's protest against the Church concludes the study.

DUPRÉ, Louis. *The Other Dimension: A Search For The Meaning Of Religious Attitudes.* Garden City NY Doubleday 1972.

DUPRÉ, Louis. *The Philosophical Foundations Of Marxism.* NY 1966.

This is an exposition and criticism of the ideas of Marx's early and primarily philosophical works—*The German Ideology*, *The Poverty of Philosophy*, and parts of *The Class Struggles in France* and *The Eighteenth Brumaire of Louis Bonaparte*—so far as they are relevant to philosophical theory. This is done in four stages: the development of Hegel's social theory, showing both the revolutionary and conservative sides; an account of the influence of Hegel's philosophy on Marx and Marx's critique of it; Marx's humanism in the writings of the Paris period; and Marx's historical materialism. Significant is the author's critique of historical materialism.

DUPRÉ, Louis. Natural Law And Birth Control. *Phil Today* 9,94-100 Sum 65.

DUPRÉ, Louis. Philosophy Of Religion And Revelation: Autonomous Reflection Vs Theophany. *Int Phil Quart* 4,499-513 D 64.

By the notion of intentionality, phenomenology overcomes the subjectivism inherent to any purely psychological interpretation of the religious phenomenon. It assumes that the religious act cannot be adequately explained as a subjective experience. However, its own methodological restrictions limit phenomenology to the sphere of immanent phenomena and thereby exclude it from adequately coping with the transcendent object of the religious act. Faith makes its object immanent only by constituting it as entirely transcendent. The religious experience, therefore, never becomes completely immanent; its immanent being retains an essential incompleteness which is unique in human experience. A full analysis of the act would require a recurrence to a transphenomenological datum. Philosophy does not have these restrictions and seems, therefore, to be a necessary complement for a full understanding of the religious experience.

DUPRÉ, Louis. Reflections On Blondel's Religious Philosophy. *New Scholas* 40,3-22 Ja 66.

DUPRÉ, Louis. The Concept Of Truth In Husserl's *Logical Investigations*. *Phil Phenomenol Res* 24,345-354 Mr 64.

It is stated that Husserl's theory of truth is ambiguous. When Husserl attacked psychological interpretations of truth, a logicism seemed to be predominant; later he inclined toward intuitionism, where truth is constituted by the real presence of the object. Purely logical relations in an eternal order of truth, independent of things, seems to conflict with the idea of evidence, which is a psychological experience. It is concluded that truth is the result of an intuition in which the thing itself is given. Finally, parallels are drawn between Husserl's double truth and Leibniz's truths of reason and truths of fact.

DURKA, Gloria and Smith, Joanmarie. *Modeling God: Religious Education For Tomorrow.* NY Paulist Pr 1976.

The nature of our interaction with reality is explored. The case is made that the fundamental category of existence is faith. Since we mediate reality through what we call models we cannot achieve justified true belief only justified belief. This epistemology is shown to be consonant with orthodoxy in its literal sense. A model of God is then worked out using Whitehead's process categories.

DURKA, Gloria and Smith, Joanmarie. Modeling. *Religious Education* 71,115-132 My-Je 76.

Through a very brief inquiry into the nature of knowledge we make a case for the position that there is no knowledge in the most accepted sense of the term and that our experience of reality is mediated by interpretive schemes which we call models. We claim however that there are criteria for evaluating the worth of competing models. We then sketch a model of reality including a doctrine of God which we think meets these criteria. Finally, we deduce a model of education which flows from the positions outlined. In this model education is, by definition, religious education.

DURKIN, Thomas J. Three Notes To Diderot's Aesthetic. *J Aes Art Crit* 15,331-339 Mr 57.

DURR, Robert Allen. Dramatic Pattern In *Paradise Lost*. *J Aes Art Crit* 13,520-526 Je 55.

DUTT, K Guru. *Existentialism And Indian Thought.* NY Philosophical Lib 1960.

This book is a clear and highly readable account of the main currents of existentialist thought, together with a briefer discussion of the relation of these ideas to the recurrent themes of Indian philosophy.

DWORKIN, Gerald and Blumenfeld, David. Necessity, Contingency, And Punishment. *Phil Stud* 16,91-93 1965.

DWORKIN, Gerald. Marx And Mill: A Dialogue. *Phil Phenomenol Res* 26,403-414 Mr 66.

This essay explores, in dialogue form, the similarities and contrasts in the moral and political philosophies of Karl Marx and John Stuart Mill. Their views on the determining forces of history, the ideal character-type, freedom, and philosophy are discussed.

DWORKIN, Martin S. *Avant-Garde Cinema: A Muted Fanfare.* *Motive* 27,24-27 N 66.

This article is a critical discussion of the difficulties of a notion of "avant-garde" in cinema, relating these to long-troublesome ambiguities of the term applied to the traditional fine arts, especially painting, where it so often connoted self-designated audiences and approved conditions of response, as much as it did artists and their works. In the case of cinema, the difficulty is compounded by the fact that true, decisive innovation has almost always originated in the commercial industry. "Avant-garde" film, in fact, has often meant modish obscurantism and snobbery, and, paradoxically, conformist pressures requiring resistance by artists and critics as vigorous as those of "official" commercial film.

DWORKIN, Martin S. *John Dewey: A Centennial Review.* NY Columbia Univ Pr 1959.

Dworkin's book is a critical appraisal of Dewey's ideas and works, relating his repudiation of much of traditional philosophy and the development of his educational thought as responding to the convergence of evolutionary theory in the natural sciences, experimental method in the social sciences, and pragmatism in philosophy, in an era of technological transformation and social and political

revolution. He is accounted the most important American philosopher, while note is taken of his own criticisms of "progressivism" in education, and those of philosophers with his central concepts, "experience," "inquiry," "growth," within his notion of the discipline of philosophy as the generalization of educational theory. (Included are bibliographical notes.

DWORKIN, Martin S. Disagreement: The Situation Of Reason. *Scientific Monthly* 75,117-119 Ag 52.

Disagreement is recognized as ingenerate to reasoning; the diversity of philosophies is ineluctable, and does not "prove" the inadequacy of philosophy, as is traditionally argued by theologians (and ideologues), who insist on recourse to dogmatic authority in search of certainty and its comforts. As it is of the very nature of critical reasoning that there is acknowledgment of and provision for disagreement, the reasoner must accommodate the problematic nature of reasoning, while contending with positions of even the most dogmatic rigidity. Thus, there is no single, finally conclusive system of philosophy; logic itself is essentially instrumental in arguing reasons for conviction, in what is a perpetual dialogue of voices and alternatives.

DWORKIN, Martin S. Fiction And Teaching. *J Aes Educ* 1,71-74 Fall 66.

DWORKIN, Martin S. Freedom And Actuality. *Freedom* 4,44-48 My-Jl 45.

This article is a discussion of freedom as concept and as principle of action, written in wartime circumstances during military service (Europe). It contrasts the hard, unremitting struggle for individual freedom with vague, rhetorical (and usually hypocritical) notions of altruism and inherent good, which confuse and impede efforts of fundamentally, naturally selfish people to live in freedom and mutually satisfactory limitation with one another. An attempt is made to find hope and justification for liberty, amid chaos and calculated destructiveness.

DWORKIN, Martin S. Hate And The Peace. *Freedom* 4,163-167 N 45.

Arguments for the deliberate avoidance of revenge as a principle to guide reconstruction after the war, building on the experience following the war of 1914-1918, that had laid the foundations for the war of 1939-1945. Special caution is argued because of the evidence of unspeakable atrocities perpetrated by the Germans, for example, the concentration and extermination camps, two of which had been witnessed by the writer's military unit. Not forgiveness, but an implementation of justice to the end of rebuilding a better world, is urged as sovereign policy for the victors.

DWORKIN, Martin S. Last Conference. *12th Street* 3,13-14 1950.

This is one of three articles making up a Memorial to Felix Kaufmann (1895-1949); the other two were tributes by Hans Reichenbach and Herbert Feigl. The article gives an account of Kaufmann's last meeting with a graduate student, discussing the interrelationship of his commitment to philosophy as clarification of thinking and his approach to teaching, demanding a respect for students that was honest, and not mere condescension. Recalling particulars of this last occasion, the article relates them to his lasting concerns and the last work on which he was engaged; a thinker and mentor of thinkers, in the great humanistic tradition.

DWORKIN, Martin S. Poetry And The Machine. *Personalist* 32,270-277 Sum-Jl 51.

Dworkin argues against a thesis of Lord Dunsany, who considered modern poetry as ugly wreckage of brains disordered by the complications of machinery. This view, the article points out, is founded on a notion of "nature" and man's place therein as fixed, and determinable according to certain traditional criteria of coherence. The poet, even when he sees, like Donne, "...all coherence gone," creates new coherence by his art.

DWORKIN, Martin S. Seeing For Ourselves: Notes On The Movie Art And Industry, Critics And Audiences. *Arts In Society* 2,138-144 1964.

This article discusses the conditions and requirements for valid critical judgment of a distinctive, quintessentially modern cultural medium, the film, "... an art, a medium of expression, an instrument of persuasion, a language for communication, an experience for participation... and yet a myriad other things, to vast anonymous masses, separate publics of concern, and each of us alone" Fundamental to the argument is the understanding that the issues of aesthetics and moral concern cannot be considered apart from the recognition of the cinema as industrial, technological, and social agency.

DWORKIN, Ronald. Judicial Discretion. *J Phil* 60,624-638 O 63.

To the layman, judges should and in general do, in the words of the maxim; find the law and not make it. The academic branch of the legal profession seems now fairly agreed that the layman is mistaken, that judges must sometimes reach their decisions by means other than the application of standards, that such standards leave them free to choose. The purpose of this paper is to argue that this professional opinion is an inaccurate way to describe the facts and that the layman's opinion, while deceptively suggesting that adjudication is simple, is closer to the truth.

DWORKIN, Ronald. Wasserstrom: The Judicial Decision. *Ethics* 75,47-56 O 64.

In *The Judicial Decision* Richard Wasserstrom searches for an ideal decision procedure. This search produces a two-level procedure which involves first deciding which relevant rule of law best promotes the function of the legal system and secondly applying that rule to the case. The assumption that the law must serve some overriding function, such as utility, is dubious and is not recognized in jurisprudential practice. It rests upon the further, questionable assumption that to the extent that courts make law, the same standards of lawmaking apply to them as to legislatures.

DWYER, Edward M. Child Centered School: Dogma Or Heresy? *Proc Cath Phil Ass* 29,274-280 1955.

DWYER, Edward. The Nature Of Philosophy. *Proc Cath Phil Ass* 17,172-174 1941.

DYCK, Martin. *Novalis And Mathematics*. Chapel Hill Univ Of N Car Pr 1960.

This book is of interest to historians of literature, mathematics, or philosophy. It attempts to come to a careful and responsible judgment of Novalis' own work and of previous critical studies and comments on the subject. Novalis' mathematical or

philosophical remarks on geometry, arithmetic, algebra, and analysis are discussed as well as his view of their relation to other disciplines, such as philosophy, literature, and music. The many and substantial quotations from German are not translated into English.

DYE, James W. Berdyaev On 'Creativity'. *Personalist* 46,459-467 Fall-O 65.

DYE, James W. Openness In Philosophical System. *S J Phil* 1,30-35 Fall 63.

DYKHUIZEN, George D. John Dewey's Liberalism. *Educ Theor* 12,45-52 Ja 62.

This essay points out that Dewey's social and political philosophy is primarily concerned with liberating the potentialities and capacities of the individual so that he can attain his highest and best fulfillment. The liberalism of the eighteenth and nineteenth centuries under the conditions which then existed did much to advance the liberation of the individual. But the machine civilization of the twentieth century has so altered conditions and created so many new problems that a new liberalism is called for. To solve these problems and protect individual opportunities for fulfillment, Dewey believes that a socially organized and experimental intelligence must be brought into play, and argues that such an intelligence can best operate in a democratically organized society.

DYKHUIZEN, George. An Early Chapter In The Life Of John Dewey. *J Hist Ideas* 13,563-572 O 52.

The essay discusses the life of John Dewey during the years he was growing up in Burlington, Vermont. It cites the several influences on his life and thought in family, neighborhood, church, school, and college.

DYKHUIZEN, George. John Dewey And The University Of Michigan. *J Hist Ideas* 23,513-544 O-D 62.

This article discusses various aspects of Dewey's life while engaged as an instructor in philosophy at the University of Michigan. It reviews the courses he taught, his relations with student and faculty organizations, his off-campus lectures and activities, and the development of his philosophy as displayed in his published articles and books—a development which was leading him away from his earlier neo-Hegelianism and toward the pragmatism he was later to embrace.

DYKHUIZEN, George. John Dewey At Johns Hopkins (1882-1884). *J Hist Ideas* 22,103-116 Ja-Mr 61.

This study follows Dewey as a graduate student at Johns Hopkins University. It discusses his studies under Charles S Peirce, G Stanley Hall, and especially George Sylvester Morris, the neo-Hegelian, who had the greatest influence on Dewey at this time. The essay also examines the four articles Dewey wrote at this time—articles which impressed his instructors with their scholarship and which helped lead to an appointment in philosophy at the University of Michigan upon completion of his work at Johns Hopkins.

DYKHUIZEN, George. John Dewey In Chicago: Some Biographical Notes. *J Hist Phil* 3,217-234 O 65.

The article gives an account of Dewey's activities outside the classroom and study while at Chicago—his interest in the Chicago public schools, his support of trade unions, his work with Jane Addams and her staff at Hull House. The essay also discusses Dewey's disagreements with President Harper over the administration of the Laboratory School and the Practice School of the Department of Education and his resignation from the University of Chicago.

DYKHUIZEN, George. John Dewey. *Macropaedia* 5,680-682 1974.

The article is a sketch of Dewey's life and thought. It traces his years as a youth in Burlington, Vermont; his graduate studies at the Johns Hopkins University; his work first as an instructor and then as a professor of philosophy at the University of Michigan; his ten years as head of the Department of Philosophy and Psychology and of the Department of Education at the University of Chicago; and the culmination of his career at Columbia University (1905-1939). A discussion of his retirement years (1939-1952) is also included.

DYKHUIZEN, George. John Dewey, Vermonter. *Vermont Life* 5,11-15 Wint 1950-51.

The article is a sketch of the life of John Dewey during the years he was growing up in his native state. It gives an account of his family and cultural backgrounds, his education in the Burlington public schools and at the University of Vermont in his native city of Burlington. It describes Dewey's favorite outdoor activities such as climbing the Green Mountains and canoeing on Lake Champlain.

DYKHUIZEN, George. John Dewey: American Philosopher And Educator. *Educ Theor* 7,263-268 O 57.

This essay summarizes the leading ideas of Dewey's philosophical instrumentalism and of his philosophy of education. It reveals him as one of the founders of American pragmatism and as the most prominent thinker of the progressive education movement in America.

DYKHUIZEN, George. John Dewey: The Chicago Years. *J Hist Phil* 2,227-254 O 64.

The essay deals primarily with Dewey's activities as chairman of the Department of Philosophy, Psychology, and Pedagogy at the University of Chicago. It sketches the early development of his instrumentalist philosophy and the appearance of the "Chicago School" of pragmatism. It discusses his contributions to the new functionalist school of psychology, and his role in establishing a new Department of Education and a "laboratory school" as an adjunct of it.

DYKHUIZEN, George. John Dewey: The Vermont Years. *J Hist Ideas* 20,515-544 O-D 59.

This study undertakes briefly to trace the influences which helped to fashion Dewey's early thought and character. An analysis of his life at home, in neighborhood, school, church, and university reveals that Dewey grew up under the influence of "old American" culture and that this left a permanent deposit in his character. His university studies, however, left him dissatisfied with the general philosophic outlook he encountered and led him to search for a better one, the quest eventually

culminating in his early neo-Hegelianism which he first embraced as a graduate student at Johns Hopkins.

DYKHUIZEN, George. The Dignity Of Man. *Ethical Outlook* 42,87-90 My-Je 58. The article inquires as to what constitutes the dignity of man and concludes that his worth and dignity center about the fact that, given the choice between a good and noble life and a bad, ignoble one, man throughout his history and despite many failures and backslidings, has remained loyal to his ideals, forever striving to attain them.

EAMES, S Morris and Eames, Elizabeth Ramsden. The Leading Principles Of Pragmatic Naturalism. *Personalist* 43,322-336 Sum-Jl 62.

EAMES, S Morris. Dewey's Views Of Truth, Beauty, And Goodness. *Educ Theor* 11,174-185 Jl 61.

EAMES, S Morris. Experience, Language, And Knowledge. *Phil Phenomenol Res* 22,102-105 S 61.

EAMES, S Morris. Primary Experience In The Philosophy Of John Dewey. *Monist* 48,407-418 Jl 64.

Dewey's contention that primary experience is both the starting place and the consummation of cognitive formulations contains its difficulties. The levels of immediacy and layers of meaning from which inquiry starts and to which it returns have their pitfalls and their dangers. Deepest down in our experience are *undifferentiated feelings*. There are *immediate qualities* and *existential involvements* given in direct experience. There are qualities acting as signs in the whole process of *sign-signification*. Inference and evidential functions emerge, but not, it seems without *symbolic formulations*. Next arises a kind of *common sense knowledge* out of which scientific methods and products arise and to which they return bringing refinement, expansion, and excellence.

EAMES, S Morris. The Cognitive And The Non-Cognitive In Dewey's Theory Of Valuation. *J Phil* 58,179-194 Mr 61.

The author analyzes the problem of the relation of the immediate to the mediate in Dewey's valuational theory. Dewey himself is vague in his discussions on this point, so that readers have taken him to be a realist, subjectivist, and idealist. The author argues that Dewey's view of valuation is naturalistic and appeals to other parts of Dewey's philosophy to bolster his claim.

EAMES, S Morris. The Lost Individual And Religious Unity. *Personalist* 46,485-500 Fall-O 65.

EAMES, S Morris. The Opening Door Of Soviet Philosophy. *Educ Theor* 15,105-111 Ap 65.

EAMES, S Morris. Valuing, Obligation, And Evaluation. *Phil Phenomenol Res* 24,318-328 Mr 64.

Contemporary naturalistic theory (Dewey) has been criticized as having a moral principle of mere expediency, and for a failure to develop a theory of moral obligation. The author attempts to answer these criticisms and to extend naturalistic theory beyond what has been generally regarded as the ground of good and right. The author is sympathetic to Aristotle and Mill, when he defines interest as long-term desire. In general a behavioral approach to valuing is taken.

EAMES, Samuel Morris. *The Philosophy Of Alexander Campbell.* Bethany WV Bethany College 1966.

Alexander Campbell (1788-1866) is best remembered as the founder of the Disciples of Christ Church. He was also the founder of Bethany College in West Virginia. This book grew out of lectures delivered at Bethany College in 1965. Eames discusses the philosophy of Campbell, whose thought is mainly derivative from John Locke and the Scottish common-sense realists, Thomas Reid and Dugald Stewart. In brief compass Eames presents Campbell's views of the empirical method in relation to the study of the Scripture, his treatment of revelation, reason and faith, his conceptions of God, of nature, and of man, and his positions in ethics, politics, and education. Eames also attempts to assess the significance of Campbell and to depict his legacy. A bibliography of Campbell's writings is appended.

EARLE, William A. *The Autobiographical Consciousness.* Chicago Quadrangle Books 1972.

The book distinguishes between objective (intentional) thinking and divestive (reflexible) thinking. The last section of the book involves phenomenological descriptions of various human activities which are intended to vindicate the presence of the absolute and eternal within the accidental and temporal.

EARLE, William A. The Ontological Argument In Spinoza. *Phil Phenomenol Res* 11,549-554 Je 51.

EARLE, William. *Objectivity.* NY Noonday Pr 1955.

"This essay re-examines the question, what is knowledge, from an approach akin to the phenomenological." Professor Earle contends that the contents of awareness have their proper mode of being independently of the mind that is aware of them, and that the mind can know this by reflection. The realm of independent being disclosed in imagination, memory, logical thought, and ontological intention turns out to be unrestricted. The author's intention is "to open the sphere of reality to whatever

we know, and not to restrict it to physical objects, nature, particulars, temporal events, etc."

EARLE, William and Edie, James M and Wild, John. *Christianity And Existentialism.* Evanston IL 1963.

This is a series of six lectures, two each by Professors Edie, Earle and Wild. Edie discusses historic themes in Chapter I, "Faith as Existential Choice," and contrasts Heidegger's views with Tillich's in Chapter V, "The Absence of God." Earle, in Chapter III, "The Paradox and Death of God," compares and contrasts Kierkegaard and Nietzsche as thinkers and, therefore, in this context, as human beings. Earle also contributes an especially exciting and illuminating chapter on Sartre—"Man as the Impossibility of God." Wild's contributions include a chapter on Christian Rationalism, primarily Aquinas and Maritain, and the final chapter, "The Rebirth of the Divine." Wild's thesis, and it appears to be the thesis of the volume, is that the absent God may now again return to us "making use of new images and new symbols."

EARLE, William and Stallknecht, Newton P and Wade, Francis C. *Freedom And Existence: A Symposium.* *Rev Metaph* 9,27-56 S 55.

EARLE, William. Hegel And Some Contemporary Philosophies. *Phil Phenomenol Res* 20,352-364 Mr 60.

Earle argues against two contemporary alternatives—positivism and existentialism. It is claimed that these are forms of irrationalism; for these two movements, rational philosophy has shrunk to nothing and has no real content of its own. Hegel's philosophical method is vindicated; the "real is the rational, and the rational is the real" is justified. This principle has been abandoned by the above two movements without due cause, a re-examination of Hegel shows why. Unfortunately, existentialism ends with life and positivism ends with calculus, and neither have real philosophy.

EARLE, William. Implicit And Explicit Phenomena. *Rev Metaph* 8,211-224 D 54.

EARLE, William. Jaspers And Existential Analysis. *J Existent* 1,166-175 Sum 60.

EARLE, William. Memory. *Rev Metaph* 10,3-27 S 56.

EARLE, William. Mr Wild's Ontology And Ethics. *J Phil* 49,672-674 O 52.

EARLE, William. Phenomenology And Existentialism. *J Phil* 57,75-83 Ja 60.

EARLE, William. The Concept Of Existence. *J Phil* 57,734-743 O-N 60.

The author gives three reasons for rejecting in principle any concept of existence: (1) there can be no concept of that which is at that very moment in the making, (2) there can be no concept of a process in which the relevant factors are themselves indeterminate, and (3) any such concept would express the essential or universal, whereas for existence itself everything important is contingent, unique, irreplaceable, and personal. The author then considers the impact on ethics of rejecting the concept of existence.

EASTON, Loyd D. *Hegel's First American Followers—The Ohio Hegelians: J B Stallo, Peter Kaufmann, Mancure Conway, August Willich.* Athens Ohio Univ Pr 1966.

This book's main aim is to present and interpret the Hegelian views of four Ohioans who were linked by personal association and made their views known from 1848 to 1860, prior to the organization of the Saint Louis Hegelians. An introductory chapter relates the Ohio Hegelians to the cultural setting, to intellectual trends involving German philosophy and social developments of the period. Five subsequent chapters analyze the philosophical views of the Ohio thinkers with reference to major events in their lives, historical circumstances, and connections with Emerson, W T Harris, Ernst Mach, Karl Marx, and others. The concluding chapter presents aspects of Hegel's thought commonly missed or minimized but highlighted by his Ohio followers—namely, his 'concrete' phenomenalism, pervasive emphasis on process, defense of the unity of thought and language, and liberalism in specifically providing for individual freedom in the state. A sizeable appendix includes key writings—chapters and whole essays, some in first translation—by each of the Ohio Hegelians. Reference notes for the expository chapters and the appendix are followed by an index for names and topics.

EASTON, Loyd D. Addendum On Rationalism And Personalism. *Phil Forum (Boston)* 16,55-59 1958-59.

- EASTON, Loyd D.** Alienation And Empiricism In Marx's Thought. *Social Research* 37,402-427 Autumn 70.
- Marx's view of knowledge is a battleground of conflicting interpretations reflecting his diverse, scattered, and unsystematic statements on the subject. An attempt is made to examine those statements, their relationships, and their possible preponderance of direction re the issue of empiricism vs rationalism. Marx's earliest overt use of "alienation," in 1843, involved theory of knowledge.
- EASTON, Loyd D.** Alienation And History In The Early Marx. *Phil Phenomenol Res* 22,193-205 D 61.
- Uses of the concept of "alienation" in current social criticism widely refer to Marx's early view that man's own deed in government, wealth, and culture "becomes to him an alien power, standing over against him instead of being ruled by him" so that he is not "at home" or whole in his social life. My primary concern is not so much current uses of "alienation" as its place in Marx's thought, with emphasis on several points—his particular appropriations from Hegel and Feuerbach, his Hellenic image of community, implications of his ambivalence toward history—which are themselves generally alien to the extensive literature on the subject.
- EASTON, Loyd D.** E S Brightman's Basic Rationalism. *Phil Forum (Boston)* 14,42-50 1956.
- EASTON, Loyd D.** Empiricism And Ethics In Dietzgen. *J Hist Ideas* 19,77-90 Ja 58.
- EASTON, Loyd D.** Hegelianism In Nineteenth-Century Ohio. *J Hist Ideas* 23,355-378 JI-S 62.
- EASTON, Loyd D.** Moncure Conway And German Philosophy. *Spahr Lectures In Americana* 4,203-222 1970.
- Having been exposed to "German rationalism" at Harvard through Parker and Emerson, Conway studied Strauss's *Life of Jesus* in Cincinnati. Encouraged by association with Cincinnati Germans and aware of Strauss's derivation from Hegel, Conway used Strauss's view of miracles in his sermons. Under his editorship the revived *Dial* magazine disseminated the philosophy of Hegel and Hegel's immediate followers in its "Catholic Chapters" and a series on "The Christianity of Christ" by O B Frothingham. Conway recognized his debt to Hegel in a memorial address at Strauss's death. Later Conway saw his position as a "religion of Humanity" explicitly based on Feuerbach, a leading "Left-Hegelian." Conway saw religious reform as requiring social reform in the abolition of slavery, extension of democracy, and changing the status of labor.
- EASTON, Stewart C.** Roger Bacon And His Search For A Universal Science. NY Columbia Univ Pr 1952.
- EASTWOOD, Gordon R.** Confirmation And Null Hypotheses. *Educ Theor* 17,120-126 Ap 67.
- EBENSTEIN, William.** *The Pure Theory Of Law*. Madison 1945.
- Despite the maturity of the movement and the quantity of writing that has been done both by the school and about the school, the present work by William Ebenstein, is, with the exception of Kelsen's own book, the first full length analysis in English of this philosophy. It is an excellently clear statement of the position and is particularly valuable because Ebenstein, having familiarized himself with Anglo-American jurisprudence, presents the doctrines of the school in the context of this non-continental type of thought. The force and accent of the doctrines are thereby more readily conveyed to the English reader.
- EBERLE, Rolf** and Kaplan, David and Montague, Richard. Hempel And Oppenheim On Explanation. *Phil Sci* 28,418-428 O 61.
- The paper contains a trivialization of the article, "The Logic of Explanation" by Hempel and Oppenheim. A number of theorems are proved which show that the relation of explainability which was proposed by Hempel and Oppenheim obtains almost between any theory and any singular sentence.
- EBERSOLE, Frank B.** *Things We Know: 14 Essays On Problems Of Knowledge*. Eugene 1967.
- EBERSOLE, Frank B.** On Certain Confusions In The Analytic-Synthetic Distinction. *J Phil* 53,485-494 Ag 56.
- EBERSOLE, Frank B.** Whether Existence Is A Predicate. *J Phil* 60,509-523 Ag 63.
- The paper seeks to understand the doctrine that existence is not a predicate by examining some of the things said in its explanation and defense. In each case the explanation is found to be wrong, and in the end it is not clear what those who defend the doctrine mean. It is wondered why so big and indefinite a category as that of a logical predicate cannot accommodate existence. Nor is it clear what is achieved by putting existence in a category by itself.

- EDEL, Abraham.** *Ethical Judgment: The Use Of Science In Ethics*. Glencoe IL Free Pr 1955.
- This book is "a pilot study in the relations of ethics and the human sciences." A systematic analysis of ethical concepts, to be presented in a later work, will indicate scientific components "within the very structure of ethics." The major task of the present study is to show how the "human sciences" can reduce "indeterminacy" or "undecidability" in ethical judgment. Generally speaking, the book argues that cooperative research in a naturalistically-conceived ethics is the true answer to ethical scepticism.
- EDEL, Abraham.** *Method In Ethical Theory*. Indianapolis Bobbs-Merrill 1963.
- Edel maintains that if we are to make progress in ethical theory we must first deal with methodological questions. Edel does not attempt in this work to present a specific ethical theory (even though his approach is naturalistic and scientific in orientation), rather he is concerned with the preliminary analysis of methodological and epistemological questions which various ethical theories present. There are five methodological approaches to ethical theory, all of which Edel treats: (1) the comparative approach (the most common, a comparative analysis of different theories), (2) the analytic (which deals especially with terms and concepts), (3) the descriptive (which deals with moral phenomena to be described), (4) causal explanatory (which investigates the causes and functions of moral phenomena), and (5) the evaluative (and application of standards).

- EDELMAN, Nathan.** *Attitudes Of Seventeenth-century France Toward The Middle Ages*. NY King's Crown Pr 1946.
- EDELSTEIN, Ludwig.** *The Idea Of Progress In Classical Antiquity*. Baltimore Johns Hopkins Pr 1967.
- The author shows how the modern attitude—that the idea of progress, as formulated in recent times, with its driving power rooted in certain cultural values, is actually prejudicial to the correct understanding of the views the ancients held toward this idea. He considers how at the heart of the technical sense of the concept of progress is not only the demand to take cognizance of advances made in the past and the

present but also the bearing they have on the future, with the explicit expectation of further advances to come. Edelstein scrutinizes the questions related to the presuppositions underlying the recent controversial treatments of the idea of progress in antiquity and proceeds to trace the gradual unfolding of this concept in ancient intellectual and cultural history by considering the original testimonies anew.

EDELSTEIN, Ludwig. *The Meaning Of Stoicism.* Cambridge Harvard Univ Pr 1966. The major theme of this book is to describe the Stoic philosophy by reworking in authentic outline its concept of nature and stating in clearly delineated terms its way of life and practice of self-criticism. A central task is that of re-examining the sources for a more critical account of the Stoic doctrines and their historical development. The basic axioms and assumptions of the distinctive periods of Stoicism are stated and a "core" Stoic philosophy is seen as pervading the several Stoicisms of the diverse periods; this "core" yields the meanings of Stoicism. A related purpose of this book is to correct the mistaken view that Stoicism is merely a decadent and unoriginal philosophy. The author believes it "nearer to the subjective tendency of modern thought than is the classical realism of Plato or of Aristotle."

EDELSTEIN, Ludwig. In Memory Of A O Lovejoy. *J Hist Ideas* 24,451-456 O-D 63.

EDELSTEIN, Ludwig. Randall On Aristotle: Two Reviews. *J Phil* 59,151-165 Mr 62. In his book, *Aristotle*, Professor Randall writes as a naturalist, and it is his opinion that the naturalism of Aristotle which he discusses is "the 'Aristotelianism' of Aristotle." "The 'Platonism' of Aristotle" is used to denote the other component of Aristotle's intellectual make-up, and the problem of Aristotle's development also looms large in the book. The present review consists of a critical discussion of Professor Randall's view of Aristotle's development and of the content of his interpretation of the spirit of Aristotelianism as naturalism or functionalism.

EDELSTEIN, Ludwig. The Function Of The Myth In Plato's Philosophy. *J Hist Ideas* 10,463-481 O 49.

EDGE, Hoyt L. Do Spirits Matter: Naturalism And Disembodied Survival. *J Amer Soc Psych Res* 70 JI 76.

Terence Penelhum, in his *Survival and Disembodied Existence*, has argued that no plausible conception of disembodied existence can be developed because it is impossible to make sense of the notion of disembodied existence through time. This is because there is no way to check on memory claim unless the person is physically present at the episode he seems to recall, thus making memory parasitic on bodily location. Edge argues that this condition is not fulfilled in the case of the memory of a clairvoyant event, and thus in this instance, the physical body criterion is not any more adequate than the memory criterion. In the October issue of the *Journal of the American Society for Psychological Research*, James Wheatley offers a criticism of Edge's paper, followed by a rejoinder from Edge.

EDGELL, David P. *William Ellery Channing: An Intellectual Portrait.* Boston Beacon Pr 1955.

After an eclipse of fifty years, the once-great reputation of the Unitarian pulpit orator William Ellery Channing (1780-1842) is refurbished by Professor Edgell with the aid of sources only recently available. "An apostle of the free mind" and "a precursor of the most brilliant period in American literature," Channing "succeeded only in maintaining a precarious equilibrium among three more or less irreconcilable forces: Christianity, the 'rationalism' of the English Enlightenment, and the self-reliance of the Transcendentalist." In a chapter dealing with Channing's relationship to the Transcendentalists, the author concludes that Channing's differences from them, philosophically speaking, were "unimportant, for American Transcendentalism was literary and romantic rather than philosophical in character."

EDGERTON, Stephenie G. The Sociology Of Knowledge Revisited. *Stud Phil Educ* 4,333-338 Spr 66.

EDIE, James M (ed). *An Invitation To Phenomenology: Studies In The Philosophy Of Experience.* Chicago Quadrangle Books 1965.

EDIE, James M (ed). *New Essays In Phenomenology.* Chicago Quadrangle Books 1969.

The papers are divided into three sections. The first deals with the problems of aesthetics, in the broader sense, including also problems of meaning and language. The papers in the second section tend to stress the positive aspects of the negativistic terms nihilism and absurd and of the experiences behind them. The last section reflects the growing interest of American phenomenologists with W James. It includes a critique of Sartre's analysis of violence and a reinterpretation of Kant in the light of existential ontology.

EDIE, James M (ed) and Parker, Francis H (ed) and Schrag, Calvin O (ed). *Patterns Of The Life-World: Essays In Honor Of John Wild.* Evanston IL 1970.

EDIE, James M (ed) and Scanlan, James P (ed) and Zeldin, Mary-barbara (ed). *Russian Philosophy* (3 Vols). Chicago Quadrangle Books 1965.

EDIE, James M and Wild, John and Earle, William. *Christianity And Existentialism.* Evanston IL 1963.

This is a series of six lectures, two each by Professors Edie, Earle and Wild. Edie discusses historic themes in Chapter I, "Faith as Existential Choice," and contrasts Heidegger's views with Tillich's in Chapter V, "The Absence of God." Earle, in Chapter III, "The Paradox and Death of God," compares and contrasts Kierkegaard and Nietzsche as thinkers and, therefore, in this context, as human beings. Earle also contributes an especially exciting and illuminating chapter on Sartre—"Man as the Impossibility of God." Wild's contributions include a chapter on Christian Rationalism, primarily Aquinas and Maritain, and the final chapter, "The Rebirth of the Divine." Wild's thesis, and it appears to be the thesis of the volume, is that the absent God may now again return to us "making use of new images and new symbols."

EDIE, James M. Expression And Metaphor. *Phil Phenomenol Res* 23,538-561 Je 63. The purpose is to examine metaphorical expression from the point of view of an intentional theory of consciousness and to suggest that the necessity of speaking (and thinking) in metaphors is not an accidental weakness of human thought but an existential necessity that pervades all the "sub-universes" of meaning. Some of the fundamental metaphors in philosophical language are analyzed and a general phenomenological theory of metaphor is suggested.

EDIE, James M. Recent Work In Phenomenology. *Amer Phil Quart* 1,115-128 Ap 64.

EDIE, James M. Transcendental Phenomenology And Existentialism. *Phil Phenomenol Res* 25,52-63 S 64.

The aim of this paper is to attempt to define what is meant by a transcendental structure in terms of the sense it has been given by the developing phenomenological tradition from Husserl to the present time. After distinguishing the phenomenological sense of transcendental from the "objective" transcendentalism of Greek and medieval philosophy and from the "subjective" transcendentalism of Kantianism, it will be possible to give the transcendental an ontological, i.e., "existential," meaning. It is this new definition of the transcendental which is the unifying element in the extremely diversified studies of the phenomenological existentialists and the basis of a new ontology.

EDLIN, Gregor. Dialectic And Complementarity. *Phil Today* 10,75-87 Sum 66.

EDMAN, Irwin (ed). *John Dewey, His Contribution To The American Tradition.* Indianapolis Bobbs-Merrill 1955.

Professor Edman's volume is in part the tribute of pupil to teacher. Edman found *Democracy and Education* (1916) to be Dewey's "central work," and gives it almost half of his pages. There are also selections from *Reconstruction in Philosophy*, *Human Nature and Conduct*, *Logic, Freedom and Culture*, and *A Common Faith*. In spite of current attacks upon Dewey by "both the right and left extremes," Edman regarded him as "in a deep sense the voice of a persistent central hard core of practical sense and humane hope and courage in America.... He became the voice for a generation (and will be again) of the liberal movement in politics, in education, in art."

EDMAN, Irwin. *Philosopher's Quest.* NY Viking Pr 1947.

Mr Edman has written of things familiar to philosophy teachers, but hitherto seldom recorded, as in his two classroom dialogues. He has written of philosophy being exploited by the best advertising techniques, in a horror story called "America's Own Philosopher." He has given voice to that popular opinion that philosophers are necessarily a little "queer," in "The Philosophical Neurosis."

EDMAN, Irwin. William Pepperell Montague: A Memoir. *J Phil* 51,615-618 O 54.

EDMAN, Marion (ed). *The Horizons Of Man.* Detroit MI 1963.

This volume contains five lectures, of which four concern practical social problems, namely, those on (1) the prospects for personal freedom, by Roger Baldwin, (2) the United Nations in the atomic age, by Frank P Graham, (3) the cultivation of curiosity (education for open-mindedness), by the editor, and (4) the role of art in society, by Hulmut Hungerland, while one concerns a philosophical problem, namely, (5) the lecture on man's vision of his place in the universe, by Amiva Chakravarty.

EDWARDS, Jonathan. *The Philosophy Of Jonathan Edwards From His Private Notebooks* (ed By Harvey G Townsend). Eugene Univ Of Oregon Pr 1955.

Just prior to his death in 1948, Professor Townsend had completed the editing of the bulk of Jonathan Edwards's notebook entries, chiefly from the *Miscellanies*, and consisting "mainly of unpublished material." He did not, however, complete the index, and the book appears without it, but the lack is partly remedied by printing the entries topically on the basis of Edwards's own index, and chronologically within the topical sections. There is also a numerical index to selections from the *Miscellanies*.

EDWARDS, Paul. *Buber And Buberism: A Critical Evaluation.* Lawrence Univ Of Kansas 1970.

EDWARDS, Paul. *The Logic Of Moral Discourse.* Glencoe IL Free Pr 1955.

The purpose of this book is to set forth the results of an inquiry into the meaning of moral judgments from the point of view of the character of the language used in assertions, disputes, and arguments employing ethical predicates. The first four chapters present a detailed analysis and criticism of some of the principal meta-ethical theories of recent times, such as those of Russell and the intuitionists, after which the author proceeds to the exposition of his own meta-ethics. The latter, while "rejecting intuitionism and all forms of subjectivism, combines features of objective naturalism with features of emotive theories."

EDWARDS, Paul. Ordinary Language And Absolute Certainty. *Phil Stud* 1,8-16 Ja 50.

EDWARDS, Rem B. *Reason And Religion, An Introduction To The Philosophy Of Religion.* NY: 1972.

Analyses are presented in this book of a cluster of troublesome intellectual problems. Most of the chapters contain suggestions for further reading in pertinent philosophical writings, mainly contemporary.

EDWARDS, Rem B. Agency Without A Substantive Self. *Monist* 49,273-289 Ap 65. A non-substantive theory of selfhood is briefly developed as a pre-supposition of making the notion of "self-determination" intelligible. The basic difference between this and older substantive theories such as that of C A Campbell is that for the latter

the self causes its choices and other self-activities whereas for the former the self simply is its activities as well as its desires, feelings, etc. This non-substantive theory is defended against the six objections (1) that the libertarian misinterprets the nature of "trying" or "making an effort," (2) that the libertarian concept of self-activity is mere "chance," (3) that libertarianism makes motivation and character superfluous, (4) that it cannot explain "continuity of character," (5) that it cannot account for moral responsibility, in part because (6) it cannot meet the condition of absolute personal identity.

EFRON, Andrew. The Sacred Tree Script: The Esoteric Foundation Of Plato's Wisdom. New Haven 1941.

According to Mr Efron, the secret of Plato's "science of numbers," and of other features of Plato's thought, is to be found in an ancient tradition into which he had been initiated and which he was careful to conceal, even from Aristotle. But Mr Efron has found the key to this ancient wisdom in the tree symbol which stands at the end of the Runic alphabet on the Gothic stone of Kylfver.

EFRON, Arthur. Philosophy, Criticism, And The Body. *Paunch* 36-37,72-162 Ap 73. The work of Norman O Brown is philosophically coherent and best understood as a critique of Idealist assumptions throughout Western philosophy, with the exceptions of Dewey and Piaget. Harsh opposition to the human body in Husserl, Hegel, Sartre, Ricoeur, Levi-Strauss, Roland Barthes, Kant, Scheler, Heidegger are pinpointed. Contrary to attacks on Brown by Lionel Abel, and by extension on Freud, the psychoanalytic concept of sublimation makes sense. So does Brown's call for an end to sublimating.

EFROS, Israel I. Ancient Jewish Philosophy, A Study In Metaphysics And Ethics. Detroit 1964.

According to the author Jewish philosophy "starts not with Rab Saadia Gaon, but with the Bible." He contends that the Jewish tradition in philosophy, beginning with the Bible, presents a struggle, over the centuries, between two opposing tendencies, (1) "holiness," a movement of transcendence, which strives "to lift the deity ever higher than man and the universe," and (2) "glory," a movement of immanence, which attempts instead to bring deity "ever nearer." The author also holds that where Greek philosophy is an explanation of being in terms of reason, Hebrew philosophy explains being in terms of value. In the process of developing the themes of Hebrew philosophy, the author outlines the relations of selves in their mutual confrontations.

EGERTON, Frank N. The Longevity Of The Patriarchs: A Topic In The History Of Demography. *J Hist Ideas* 27,575-584 O-D 66.

The author recounts the changing attitudes toward Old Testament accounts of the ages of the Hebrew patriarchs. Beginning with the views of the Church fathers, and continuing through the Eighteenth century, diverse views are discussed from the perspective of how they related to scientific theories. The author claims that whenever Biblical writings were utilized as scientific data, scientists would attempt to make them more understandable by filling in unexplained gaps with natural explanations. Slowly, science began to realize that it can explain the past only by using the principle of uniformity.

EHMAN, Robert R. A Defense Of The Private Self. *Rev Metaph* 17,340-360 Mr 64.

The author's aim is to show that one can maintain that a self is a private consciousness without sacrificing assurance of a common world, of outward action, or of the existence of others. To establish his thesis he argues first that existence can be conceived as presence to consciousness. Then, analyzing the concept of action, he argues that the relation of the body to the self is a relation between means and end. Finally, he argues that as agent the self becomes public; one must recognize others by comparison with one.

EHMAN, Robert R. Imagination, Dream, And The World Of Perception. *J Existent* 5,389-402 Sum 65.

EHMAN, Robert R. Moral Judgment And Ultimate Ends. *Phil Phenomenol Res* 25,253-258 D 64.

In surveying the connection between judgments and action, it is maintained that a

man's moral judgments are more especially relevant to his action than his ordinary factual judgments. The author upholds that the moral end is ultimate and that moral judgments are statements of our ultimate ends or means to those ends. A justification of moral judgments is showing that they state our own ultimate end or a means to our ultimate end. There are two sorts of inquiry: conceptual analysis of the concepts of possible ultimate ends and empirical investigation of the means to these ends.

EHMAN, Robert R. Moral Responsibility And The Nature Of The Self. *Rev Metaph* 16,442-449 Mr 63.

The author maintains that the conflict between determinism and libertarianism turns on two opposed conceptions of the self: determinism conceives of the self as nothing more than its determinate nature and explains its action as the actualization of dispositions, while libertarianism sees the self as transcending its determinate nature, and understands its action as the actualization of its power of self-determination. To establish the importance of these notions of self, the author reviews arguments on the question of moral responsibility. He then contends, against determinism, that the self cannot be reduced to the status of an object.

EHMAN, Robert R. On Evil And God. *Monist* 47,478-487 Spr 63.

"The religious man must come to terms with the apparent contradiction between his faith in a divine ground and his experience of evil." The author discusses two solutions to this problem, both of which fail to resolve it: one of which denies the reality of evil, the other of which denies that God is good in a sense we can understand. Both of these are based on the assumption that purposeless evil cannot arise out of divine good. This assumption must be questioned to resolve the problem. The author concludes: the existence of evil need not undermine faith in a divine ground, because once it is admitted that God is self-sufficient and creation is contingent, there will be no necessity for the creation of more good than we in fact find. If God freely creates, man's entire being is a free gift.

EHMAN, Robert R. On The Possibility Of Nothing. *Rev Metaph* 17,205-213 D 63.

Addressing himself to the question whether there must be something, or could be nothing at all, the author distinguishes between two conceptions of being. According to the first, being is the totality of beings, and absolute nothing is inconceivable; according to the second, being is a property of beings, and there might conceivably be nothing at all. After analyzing the metaphysical implications of these positions, the author argues for his conception of being as presence to consciousness in all its modes. He concludes that nothing (the absence of beings) is conceivable and that being is, therefore, logically contingent.

EHMAN, Robert R. On The Reality Of The Moral Good. *Rev Metaph* 16,45-54 S 62.

The author addresses the problem of reconciling the existence of moral evil with the rationality of the moral good. He defines two approaches: the first posits that moral failure is fully compensated, personally or vicariously, within or beyond history; the second argues that the good, properly conceived, includes moral failure, either because the good is dialectical, or because human freedom requires that failure be possible, or because evil is a necessary condition for the realization of the maximum good. The author refutes these arguments and submits that guilt, the diminution of one's moral worth, is that person's compensatory good.

EHMAN, Robert R. Subjectivity And Solipsism. *Rev Metaph* 20,3-24 S 66.

Fundamentally, subjectivity means the relation to self that constitutes our experiences and actions as our own, and the radical philosophical problem of other subjects concerns the existence in others of a relation to self analogous to the prereflective relation to self we experience in our own case. The author critically examines the disclosure of subjectivity in Hegel and Sartre. Then, reviewing the development of the child's sense of self, he argues that in the measure that we become aware of our own subjectivity or self-relatedness, we become aware of the subjectivity of the other.

EHMAN, Robert R. The Ideas Of Reason. *Rev Metaph* 15,225-235 D 61.

Citing Kant, the author defines an idea of reason as a concept of the unconditioned totality of the conditions of the conditioned. A theoretical idea is valid if it conforms to the real; but a practical idea can be justified only by an appeal to the unconditioned obligation to realize it. Having introduced these terms and theses, the author examines the ontological and cosmological arguments as attempts to prove the reality of the ideas. He then argues that the apparent contradiction between the idea of the good and moral failure is overcome by cosmic punishment, forgiveness, and redemption.

EHMAN, Robert R. Two Basic Concepts Of The Self. *Int Phil Quart* 5,594-611 D 65.

In this article, I attempt to show the compatibility and complementarity of the naturalistic-causal and phenomenological approaches to the understanding of the self. Although the intentional relation between an act and its objects is not susceptible to causal analysis, the act itself can be analyzed in causal terms by relating it to other acts and objects. The acknowledgement of the irreducibly intentional nature of the relation between perception and what is perceived and will and what is willed avoids the paradoxes and skepticism that arise from a causal analysis of the relation. From a naturalistic point of view, all acts appear causally determined; from a phenomenological point of view, they appear spontaneous and free. The causality has to do with their relation to other temporal acts and events; the freedom concerns the relation of the acts to the agent. There is a paradox in treating an act which opens intentionally to a world horizon as itself an object within the world.

EISELEY, Loren Corey. *Francis Bacon And The Modern Dilemma.* Lincoln NE 1962.

This book is a eulogy of Sir Francis Bacon and of his ostensible prophetic insight into the nature of knowledge; it attempts to reinstate him in a position of relevance to contemporary times. Bacon is cast as an innovator in the history of ideas for having espoused experiment and inductive knowledge rather than "scholastic system building." The booklet, however, evokes the uneasy feeling that, according to the author, almost any significant thinker of the past would be just as relevant in facing the "modern dilemma."

EISELEY, Loren Corey. *The Mind As Nature.* NY Harper & Row 1962.

EISENBERG, Paul D. Basic Ethical Categories In Kant's *Tugendlehre*. *Amer Phil Quart* 3,255–269 O 66.

Of the six basic categories which a normative ethical theory may recognize and exemplify, the first five are fairly clearly employed by Kant in the *Tugendlehre*, but the sixth is not given adequate recognition by him. In order to establish those conclusions, one has to investigate the leading notion of the *Tugendlehre*, that of obligatory ends. Closely connected with that notion is Kant's division of duties into perfect and imperfect ones. Consideration of a number of ways of elucidating that division leads one to conclude that it is not really so sharp as Kant suggests. The sphere of duty comprises a continuum of duties of wider and of narrower obligation; beyond that sphere belong many things which one morally ought to prize and to pursue, but which do not constitute obligatory ends for men.

EISENDRATH, Craig R. *The Unifying Moment.* Cambridge Harvard Univ Pr 1971.

the Unifying Moment is a reinterpretation and philosophic argument by the author for the conceptual unity of the late-nineteenth-century psychologist William James and twentieth-century philosopher Alfred North Whitehead (1861–1947). He discusses the philosophical traditions behind the thought of both figures, analyzes their concepts of space, time, causality, perception, laws of nature, God, and civilization. The focal point of the book, however, is the argument that the psychology which corroborates Whitehead's thought is that of James—the merging of James' theory of will and personality within Whitehead's theory of concrescence and organism.

EISENSTADT, S N and Culearu, M. *The Form Of Sociology: Paradigms And Crises.* NY Wiley 1976.

This study offers a broad historical approach to the development, present state, and possible future directions of sociology as a science. The third theme removes it from the domain of pure history, since the authors provide evaluative analyses at many junctures. Its first three chapters are devoted to forerunners of sociology, its founding fathers, and the emergence of a distinctive sociological tradition in the twentieth century. Chapter 4 offers a survey of the major types of explicative paradigms. Two chapters follow on the development of sociology between the wars (Chapter 5) and following World War II (6). Four subsequent chapters are respectively devoted to the emergence of the structural–functional model, analytic controversies concerning counter–models, metascientific controversies concerning the nature and limitations of sociology, and contemporary analytic developments. The three closing chapters offer reflections on the contemporary analytic crisis in sociology, and the possible moves to broaden the sociological tradition.

EISENSTEIN, Ira. *The Ethics Of Tolerance Applied To Religious Groups In America.* NY King's Crown Pr 1941.

Dr Eisenstein presents a survey of the contemporary phenomenon of intolerance, chiefly from the standpoint of recent American literature. Special attention is given to anti-Semitism. The theoretical basis is laid in Chapter II of Part I, where the principle of equity or justice is developed out of an examination of the nature of social polarity as leading to a state of equilibrium.

ELIOT, T S. *Knowledge And Experience In The Philosophy Of F H Bradley.* NY Farrar Strauss 1964.

This is Eliot's Harvard Ph D dissertation and should be of great interest to literary historians. The young Eliot scrutinizes the meaning of key terms in Bradley's philosophy such as experience, feeling, thought, sensation, subject, and object. He examines Bradley's doctrine which conceives of "immediate experience" as the only independent reality. While he rejects some of Bradley's logical and psychological doctrines, he accepts his absolute idealism with its two important principles, Degrees of Truth and Reality, and Internality of Relations. He discusses in separate chapters the deficiencies of both the psychological and epistemological theories of knowledge, and concludes with an analysis of Bradley's theory of finite centers and its relationship to the concept of solipsism.

ELLENBURG, Stephen. *Rousseau's Political Philosophy: An Interpretation From Within.* Ithaca NY Cornell Univ Pr 1976.

This interpretive study shows the unity of Rousseau's political thought. His radical egalitarianism and non-individualism, unlike the self-contained, private individual and society as aggregate of Locke's and other variations on liberalism makes individual existence socially dependent and creative.

ELLERY, John Blaise. *John Stuart Mill.* NY Twayne 1964.

ELLIN, Joseph. Fidelity To Law. *Soundings* 51,401–431 Wint 68.

Philosophers have often asserted that there is a general obligation to obey the law. Several arguments for this general obligation are examined and rejected, including the obligation from fair play (Rawls). Attempts to minimize the conflict between morality and the duty to obey the law are also criticized, including the view that the duty to obey the law is "prima facie only"; that under a fair constitution civil disobedience may be regarded not as violating the law but as testing it (Dworkin); and that disobedience is an affirmation of law if the violators take the penalty. I conclude that no general obligation to law can override the moral duty to evaluate one's actions.

ELLIN, Joseph. Wasserstrom And Feinberg On Human Rights. *J Phil* 62,101–102 F 65.

The concept of rights is often thought of as reducible to some other ethical concept, particularly permissions: to have a right is to have permission to do something. Perhaps this is due to the belief that every action can be thought of as either obligatory, prohibited or permitted. But there is an essential difference between having a right and having a permission. I can claim a right, but to claim a permission is self-contradictory: I can only request permission. Hence Wasserstrom seems correct to say that "rights fulfill certain functions that... (no) other... concept can fulfill."

ELLIS, Brian. A Vindication Of Scientific Inductive Practices. *Amer Phil Quart* 2,296–304 O 65.

In this essay, it is shown that the rational preferability of using certain inductive rules might be demonstrated by arguments of the kind used by Reichenbach and Salmon, only if it is assumed that the things we are dealing with are theoretically isolated. However, if this assumption is made, then a further argument shows that a knowledge of which inductive rules we must follow does not help us at all to make predictions about the unknown. Hence the theoretical involvement of the subject matter of our inductive arguments appears to be a necessary condition for the possibility of making rational predictions about that subject matter.

- ELLIS, Madeleine B.** Rousseau's Socratic Aemilium Myths: A Literary Collation Of *Emile* And *The Social Contract*. Columbus Ohio State Univ Pr 1976.
- The collation of texts from the two books, together with the use of Old and New Testaments and the Platonic Dialogues, enables Ellis to conclude that, not only is *The Social Contract* an appendix to *Emile*, but that the two works together constitute Rousseau's version of the *Republic* and *Symposium* as transfigured by Judaeo-Christian traditions. The structural and substantive parallels evoked are indeed striking. For Ellis, Socrates' and Rousseau's objective are one: the portrayal of man's nature and duties, combined with a description of the nature of justice and injustice together with their effects upon the human soul.
- ELLIS, William W.** *White Ethics And Black Power*. Chicago Aldine 1969.
- ELLISTON, Frederick (ed)** and Baker, Robert (ed). *Philosophy And Sex*. Buffalo NY Prometheus Books 1975.
- Philosophy and Sex* is an anthology of twenty-two contemporary philosophical essays on sexual morality, sexual perversion, sexual language, marriage, feminism and abortion. The articles were selected (and, in some cases, commissioned) to aid, abet, as well as to document the recent rebirth of interest in sexual philosophy.

- ELSE, Gerald F.** *Aristotle's Poetics: The Argument*. Cambridge Harvard Univ Pr 1957.
- Though its interest is somewhat different, this literal translation and exhaustive commentary is to be compared with the works of Butcher, Margoliouth, Gudeman, Rostagni, and Sykutris. The central concern here is with Aristotle's argument, its structure and interpretation. For that reason short sections of the Greek text are followed by a careful English translation which attempts to follow the extended connotations of the passage, and by a thorough commentary. Chapters 16, 20-22, and 25 are not dealt with because they contain material extraneous to the central argument, or highly technical problems that require more extended treatment. The commentary presents full and in many instances original interpretations of the key Aristotelian concepts such as plot, character, hamortia, katharsis, reversal, discovery, and the art of tragedy. A consistent reading of the *Poetics* is achieved.

- ELWOOD, Douglas J.** *The Philosophical Theology Of Jonathan Edwards*. NY Columbia Univ Pr 1960.
- This book appraises the thought of Jonathan Edwards. Elwood bases his interpretation upon the unpublished as well as published manuscripts. According to him, Edwards constructed a system that stood between traditional Calvinism and classical pantheism, which drew upon the Cambridge Platonists, and which placed primary emphasis on the aesthetic experience of God. Elwood maintains that Edwards' theology can help us to recover an immediate contact with "ultimate reality" and God.
- ELY, Stephen Lee.** *The Religious Availability Of Whitehead's God, A Critical Analysis*. Madison 1942.
- In this book, Professor Ely examines the religious value of the God of Whitehead's *Process and Reality*. He finds that Whitehead's basic conception of God makes him too interested in His own personal aesthetic enjoyment to be of appreciable moral service to humanity. Instead of relieving human suffering and evil, He either ignores it or imagines it in an ideal setting, so that He can enjoy it as if it were not evil. Ely concludes that Whitehead's God is an egoistic esthete, that He is not primarily motivated by a desire for human good, and that therefore He cannot meet all the requirements of a humanly satisfying deity.
- ELY, Stephen Lee.** *The Religious Availability Of Whitehead's God*. Madison WI 1942.
- This book proposes "to describe the nature of Whitehead's 'God' and to inquire whether such a 'God' can serve religious ends."
- EMBLER, Weller.** *Metaphor And Meaning*. Deland FL Edwards 1966.
- The author supports the view that metaphor is fundamental to the processes of human language and therefore can serve as a diagnostic tool in specifying what the ideals of any given generation have actually been. He studies the ways in which metaphors occur, what their initial functions are and how they often cease to be rhetorical devices and begin to function as statements of fact, thereby prescribing certain kinds of behavior. One of the basic values of this book is the insight it affords into the ways in which figurative language may function as the home of many unexamined beliefs and mental attitudes.

- ERICKSON, Stephen A.** *Language And Being: An Analytic Phenomenology.* New Haven Yale Univ Pr 1970.
The author locates this essay "at the conceptual intersection" of three problems: the nature of meaning, the significance of language, and the essence of the human world. He uses the early writings of Heidegger about meaning, language and *Dasein* as a model for understanding the conceptual interdependence of these problems. But his most intriguing attempt is a critical comparison of Heidegger's views with those held by Ryle, Wilfred Sellars and Wittgenstein. The author maintains Heidegger's view is supposedly closed to the view of Wittgenstein's "*Tractatus*": for Heidegger the meaning of a non-linguistic entity can only be understood as the functions of that entity, and these functions are best discovered and described by involvement rather than detachment.
- ERICKSON, Stephen A.** Leibniz On Essence, Existence And Creation. *Rev Metaph* 18,476-487 Mr 65.
The author contends that the view of creation most basic to Leibniz's thought is that of emanation accomplished by means of an act of divine self-limitation. To establish his thesis he argues that this theory is most consistent with Leibniz's definitions of essence, existence, power, perfection, and related concepts, and that given these definitions another possible interpretation of Leibniz's understanding of creation is irremediably contradictory. The author closes with summary remarks on Leibniz's concept of limitation, the relation between possible worlds and the actual world, and the relationship between God and the world.

- ERMATINGER, Charles J.** and Sweeney, Leo. Divine Infinity According To Richard Fishacre. *Mod Sch* 35,191-212 Mr 58.
Influenced by the Paris condemnation of 1241, Richard Fishacre spoke of divine infinity while discussing the beatific vision in his "In I Sent," written just before 1245. The primary aspect of God's infinity is power, which is established by the "distantia" argument: a maker's power is as great as the distance between what is made and what it is made from; the distance between nothing and something is infinite, and God created matter from nothing. His power is infinite in that He is infinitely separated from what accounts for passivity and limitation—matter. Therefore, His infinite power is not merely an external attribute, but depends on His very being which, being completely free from matter and its limiting determination, is infinite. Conclusion: Fishacre may be the first to present infinity as a perfection of the being of God, a doctrine common after 1250.

- ESHELMAN, Martin.** Aesthetic Experience, The Aesthetic Object And Criticism. *Monist* 50,281-298 Ap 66.
The aesthetic experience, in Husserl's language, brackets or suspends the natural standpoint. Consciousness perceives the work of art not as an object of the factual world, but as a man-made artifact to be enjoyed just for certain immediately experienced qualities. The work of art is neither a real physical entity nor a real psychical entity, but a purely intentional object, for which the physical object serves as a substratum. The critic must recreate the purely intentional object by completing the schema of the work and by actualizing its merely potential elements. He must experience the ensemble of axiologically neutral qualities, aesthetic qualities, and aesthetic values as an harmonious whole. A full concretion of the work is the aesthetic object—the object the critic describes and judges. By metaphorical or partly metaphorical language—never completely adequate—he tries to convey to his readers the experience of its qualities and values.

- EVANS, C O.** *The Subject Of Consciousness.* NY Humanities Pr 1970.
In developing a philosophical theory of the self the author's purpose is to explain how it is that our experience of being selves is an experience of being continuous subjects of experience. The theory is offered as an explanation of self-awareness, where this is understood as the awareness of the self as the conscious subject of the states of the self, and the author attempts to show how such self-awareness is possible and in what awareness of the conscious self consists.
- EVANS, C Stephen.** *Despair: A Moment Or A Way Of Life?* Downers Grove IL Inter-Varsity Pr 1971.
This book is a philosophical study of the concept of despair as treated in existential literature and philosophy. It focuses on the loss of "moral values" and the "meaning of life" and traces both forms of despair to the "death of God" and the experience of the alienated self. The concluding chapter argues that Christian belief provides a possible answer to despair—an answer which is both intellectually honest and existentially viable.
- EVANS, Charles.** Timeless Truth. *Phil Rev* 71,241-242 Ap 62.
- EVANS, D Luther.** The Difference Between Getting Truth And Getting Wise. *Phil Phenomenol Res* 22,360-365 Mr 62.
- EVANS, D Luther.** The Pivotal Point Of Idealism. *Personalist* 37,350-357 Autumn-O 56.

- EVANS, Daniel Luther.** *A Free Man's Faith.* NY Oxford Univ Pr 1949.
"The theme of the book," states the author in his preface, "is that faith in reason and faith in revelation are both necessary for a constructive understanding of man and the cosmos."
- EVANS, J L.** Meaning And Use. *Phil Phenomenol Res* 22,251-261 D 61.
Evans justifies his concept of meaning in light of Abelson's criticisms, which arise from a prejudice in favor of certain logical categories (substance, attribute and relation), representing a descending order of respectability. The author holds that this involves thinking that the status of a concept would be enhanced if it could be regarded as some sort of objective entity, such as a Platonic form, and if this should prove impossible, then the concept must be either attributive or relational. There is a disappointment at seeing the displacement of meaning from the category of substance by the "use" theory of meaning. The main misunderstandings of the phrase "rules of use" are examined, and the article ends by distinguishing between using and misusing words.
- EVANS, Joseph W (ed).** *Jacques Maritain: The Man And His Achievement.* NY Sheed & Ward 1963.
Thirteen essays by as many writers depict the multifaceted personality of the Thomist philosopher J Maritain. Several of the studies are peripheral to his philosophy.

Among them are Yves Simon's account of Maritain's evolution as a thinker, and James Collins' study of his influence on American Thomism.

EVANS, Joseph W. Church And State: A Maritain Analysis. *Thought* 26,585-589 Wint 1951-52.

EVANS, Joseph W. Current Questions: Pluralism. *Thought* 27,571-574 Wint 1952-53.

EVANS, Mary Alice. Mimicry And The Darwinian Heritage. *J Hist Ideas* 26,211-220 Ap-Je 65.

This article traces the history of the theory of mimicry. The author first recounts the earliest known observations of one animal or insect resembling another, and then describes the development of the theory of mimicry by Henry W Bates, a contemporary of Darwin. Later genetic explanations of mimicry are outlined, and various examples of mimicry are cited. The author concludes that it provides Darwinism with an excellent example of natural selection through adaptation, an example which Darwin himself did not probe.

EVANS, Melbourne G. *The Physical Philosophy Of Aristotle.* Albuquerque Univ Of New Mex Pr 1964.

The purpose of this work is to set forth, in brief compass, the essentials of Aristotle's physical and mathematical thought, together with the relevant elements of his metaphysical and epistemological doctrines. It is shown that some parts of Aristotle's thought are surprisingly modern, such as the relation of time to motion and the closed structure of the universe. But even those parts of his system which today seem grotesque are seen to be such that their criticism laid the foundations for much of present day thought.

EVANS, Melbourne G. Aristotle, Newton, And The Theory Of Continuous Magnitude. *J Hist Ideas* 16,548-557 O 55.

In mathematics, entities such as lines, planes, and solids have generally been regarded either as summations of infinitesimal parts, or else as products generated by the flow of some one entity taken as primary. The one view is static, and essentially arithmetical; the other dynamic, and essentially geometrical. This article traces the history of the long conflict between these viewpoints, and indicates the geometrical attitude maintained by Aristotle and Newton in common opposition to the dominant current in mathematical thought.

EVANS, Melbourne G. Causality And Explanation In The Logic Of Aristotle. *Phil Phenomenol Res* 19,466-485 Je 59.

The problem is that of the relation of Aristotle's logic and theory of knowledge to his metaphysical and physical doctrines, especially as that relation bears on his doctrine of causality. The article analyzes the structure of the syllogism, and shows that a constant relation exists between the generation of conclusions by means of syllogisms and the generation of effects from their causes in nature. It is also shown that the rationalism of Aristotle is tempered by a tendency toward outright empiricism, and that even the distinction between syllogisms of fact and of reasoned fact is grounded in experience.

EVANS, Melbourne G. Inner Experience And The Causal Relation: The Philosophy Of Maine De Biran. *Personalist* 42,500-512 Autumn-O 61.

Hume had argued that the fact of a certain order in nature is not, in itself, evidence that that order is necessary. Maine de Biran attempted to answer Hume by grounding the concepts of force, and of cause and effect, in immediate experience, and by claiming for psychological evidence the universality and necessity that Hume failed to find. The article sketches the structure of Maine de Biran's system, and argues the failure of his attempt to answer Hume.

EVANS, Melbourne G. Newton And The Cause Of Gravity. *Amer J Physics* 26,619-624 D 58.

Newton's statement, "I make no hypotheses," has often been taken to be an early expression of the positivist attitude. The task of science is to discover the laws of nature, not to explain nature. The article shows that Newton framed many hypotheses to explain the force of gravity, but rejected each as being either physically absurd, or else contrary to reason. Newton had, therefore, no theory of gravity. It also shows how Newton's efforts to explain gravity obscured from him the universal character of the inverse-square relation, and delayed for twenty years a final formulation of the law of gravity.

EVANS, Melbourne Griffith. *The Physical Philosophy Of Aristotle.* Albuquerque Univ N Mex Pr 1964.

EVANS, Melbourne J. On The Demonstration Of Indeterminacy. *Mod Sch* 43,55-64 N 65.

Throughout the histories both of philosophy and of science, a certain indeterminacy in nature has often been asserted. The article outlines the main arguments, and shows that indeterminacy has never been demonstrated. Furthermore, it is shown that indeterminacy is not, by its very nature, open to demonstration.

EWING, A. C. *The Definition Of Good.* NY Macmillan 1947.

The chief purpose of this book, as the author puts it, is to find out what is meant by goodness, not to give an account of what things are good. And yet, this apparently formalistic analysis has a very concrete aim. This aim is, to use the author's own words, "to stem the tide of subjectivism and naturalism in ethics." The outcome of Ewing's analysis is that a clear concept of intrinsic goodness cannot be formed without including in it the concept of ought. In the course of the argument the book offers a very extensive and acute criticism of recent naturalistic and non-naturalistic ethical theories.

EZORSKY, Gertrude. *Ad Hominem Morality.* *J Phil* 63,120-125 Mr 66.

R M Hare in his *Freedom and Reason* makes two claims: first, that all moral judgments are prescriptive and universalizable and second, that an agent cannot accept a singular prescription to that which he is averse. On the basis of these claims Hare argues that an agent must reject a moral judgment which when universalized entails a singular prescription he is averse to accepting, i.e., A wants to put B in jail for not paying his debt. But the moral judgment that any debtor ought to put his debtor into prison if he does not pay, entails the singular prescription, "Let A if in B's position, be imprisoned."

EZORSKY, Gertrude. Truth In Context. *J Phil* 60,113-135 F 63.

According to the assertive-redundancy thesis—AR—there is no separate problem of truth. This paper discusses and criticizes the views of several philosophers who subscribe to AR in one form or another. It argues that AR solves the problem of truth only if that problem is conceived in a particular way. But dissolution of that problem does not entail the redundancy of 'true'. A role for 'true' is found in those situations where doubt, surprise, and objection provide a proper background for an endorsement performance. The difference between a truth declaration and other agreeing devices is most vivid in contexts of inquiry, when uncertainty surrounding a hypothesis is dispelled by warranting evidence.

FABER, Geoffrey. *Jowett, A Portrait With Background.* Cambridge Harvard Univ Pr 1958.

Though not a philosophical work this book should be mentioned as a full-length biography of one who had very great influence on the philosophical movement in Oxford of the late nineteenth century. It is the first book of importance on him since 1897. It contains much information on the religious contraries of the mid-nineteenth century.

FAGOTHEY, Austin. *Right And Reason: Ethics In Theory And Practice.* St Louis Mosby 1963.

This revision of Father Fagothey's textbook in ethics retains most of the features of the previous editions. The book covers both the general theory of Scholastic ethics and a discussion of problems in applied ethics. Most distinctive in the present version is the use of value theory, particularly in Chapter five. In this axiological development the book comes under the influence of Joseph de Finance. The chapter (35) on the morality of warfare has been brought up to date. Throughout there is more bibliographical material provided than in the usual text of this character.

FAIN, Haskell. *Between Philosophy And History: The Resurrection Of Speculative Philosophy Of History Within The Analytic Tradition.* Princeton NJ Princeton Univ Pr 1970.

FAIRBANK, John K (ed). *Chinese Thought And Institutions.* Chicago Univ Of Chicago Pr 1957.

This is the eighth book in the "Comparative Studies of Cultures and Civilization series" edited by Robert Redfield and Milton Singer. The approach is concentrated toward the interrelation of ideas, especially Confucian ideas, and to the political institutions and actions of China. The contributing scholars emphasize the role of ideas within the context of men's responses to their social situations. The contents of the papers fall into two main groups: 1) historical monographs presenting the relation of ideas to the exercise of state power; and 2) the role of ideas in China's social order—primarily those affecting the official class.

FAJ, Ahilla. The Neo-Stoic Principle Of Tension. *Phil Today* 4,80-94 Sum 60.

FAKHRY, Majid. *A History Of Islamic Philosophy.* NY Columbia Univ Pr 1970.

The author offers a highly scholarly historical account of the Islamic philosophy from its emergence to the present. Two main currents are pervasive of the Islamic thought: "Progressivism" and "Traditionism." The author seems to imply that precisely this constant conflict between these two forces secures the vitality of the Islamic thought. Influences of Persian and Indian philosophy are also discussed. Since the Koran is the firm basis for Muslim culture and life, over-emphasis upon theological issues is expected. But philosophical concerns, around and beyond theology, can be well noticed; especially, contemporary trends such as existentialism and logical positivism can be distinctly identified.

FAKHRY, Majid. Al-Farabi And The Reconciliation Of Plato And Aristotle. *J Hist Ideas* 26,469-478 O-D 65.

FALES, Walter. *Wisdom And Responsibility; An Essay On The Motivation Of Thought And Action.* Princeton NJ Princeton Univ Pr 1946.

This work is a stimulating approach to a world view based largely on a gestalt approach and Scheler, although the author disclaims the possibility of setting forth all the influences and works that have shaped his thoughts. He stresses the place of intuition in furthering man's approaches to knowledge and the potency of final ends which play their vital parts in man's activities even though they may not always be consciously recognized.

FALES, Walter. Causes And Effects. *Phil Sci* 20,67-74 Ja 53.

FALES, Walter. Genius And Terminus. *Personalist* 36,29-35 Wint-Ja 55.

FALES, Walter. Historical Facts. *J Phil* 48,85-94 F 51.

This article deals with the following three questions: What are historical facts? How can they be reported? Why is anyone interested in them? A historical fact is defined as being, "an event which influences the minds of people as to bring about unique, irreversible changes in their pattern of thinking, initiating an indefinite series of noticeable effects upon their style of living."

FALES, Walter. Objectivity And Relevancy In Our Search For Truth. *Phil Phenomenol Res* 13,212-220 D 52.

FALK, Arthur E. Two Conceptions Of A Logic Of Discovery. *Proc Cath Phil Ass* 40,203-208 1966.

FALK, Richard A. *Law, Morality And War In The Contemporary World.* NY Praeger 1963.

The author tries to "complement" current inquiries into "defense strategy," "constraints upon military research and development," and related enterprises with a description of "some of the contributions that can be made by law and morality to an international regime of restraint that is designed to minimize the risks of nuclear war without increasing the vulnerability of nations to direct or indirect aggression."

FALK, Richard A. The Relations Of Law To Culture, Power, And Justice. *Ethics* 72,12-27 O 61.

FALK, W D. Action-guiding Reasons. *J Phil* 60,702-718 N 63.

One speaks of actions guided by reason and it is common to speak of guidance by reason as by reasons. But how is this to be understood? Many repudiate Hume and Stevenson's concept of a reason that guides through being a kind of choice-determining mental cause. The present paper joins these critics part of the way but not on the ground that reason and cause have no affinity. It argues in defense of the view that reasons are forces. This view draws its strength from its power to make the choice-guiding role of reason intelligible and can be held in a form that avoids the paradoxical consequences into which it has often led its advocates.

FALK, W D. Moral Perplexity. *Ethics* 66,123-131 Ja 56.

FALK, W D. Morality And Convention. *J Phil* 57,675-684 S-O 60.

The author takes up the debate between formalism and non-formalism in ethics, inquiring whether morality is essentially personal or social. He argues that linguistic convention cannot ensure any more than pure reason or intuition that materially moral reasons must always come first in formally well-founded choice. Moreover, he argues, primary morality (moral obligations as restrictions on one's freedom of action by the mores or manners of a social group) has no unequivocal successor on the level of autonomous choice.

FALLICO, Arturo B. *Art And Existentialism.* Englewood Cliffs NJ Prentice-Hall 1962.

Art is considered from the point of view of phenomenology and existentialism. The author stresses the work of art as "first utterance," as "the renewal of spontaneity," and as "rebellion." He states: "art is the expression of consciousness which antecedes both reflective thought and practical action.... Dream-like, this consciousness makes and lives in free possibilities of being, cast in a kind of actuality which is indifferent to time, space and even death.... The original aesthetic constructivity accomplishes perfectly what neither waking-state reality nor dream can accomplish separately—it lends wakeful reality to the dream, and dream-like liberating spontaneity to wakeful life."

FARBER, Marvin (ed). *Philosophic Thought In France And The United States: Essays Representing Major Trends In Contemporary French And American Philosophy.* Buffalo NY Univ Of Buffalo 1950.

This is a monumental survey of philosophic thought in the two nations as reflected by a collection of essays representative of major current trends. There are essays on the philosophical tradition between the two wars, idealism, materialism and naturalism, phenomenology and existentialism, logic and philosophy of science, theory of knowledge, aesthetics, social philosophy and the philosophy of education, among others. There are nearly forty well-known philosophers in the list of contributors to the volume.

FARBER, Marvin (ed). *Philosophical Essays In Memory Of Edmund Husserl.* Cambridge Harvard Univ Pr 1940.

The essays collected in this publication furnish new material for the exemplification of the evaluative result already reached in the systematical discussion of Husserl's work. The following two types of contribution are offered: (1) Outlines of the general traces of phenomenology: To this class belongs Barber's restatement of Husserl's claim for exactitude in philosophy, Carin's exposition of the phenomenological method, and Wild's remarks about Husserl's critique of psychologism. As far as the idea of scientific philosophy and the critique of psychologism are concerned the strongest sides of phenomenology are herewith represented.

FARBER, Marvin (ed) and Madden, Edward H (ed) and Handy, Rollo (ed). *Philosophical Perspectives On Punishment.* Springfield IL Thomas 1968.

The book consists of a symposium on philosophical perspectives on punishment. The four major papers were delivered by three philosophers (Charles A Baylis, Brand Blanshard, C J Ducasse) and one legal scholar (Mitchell Franklin), and eight commentaries on those papers were given by philosophers, legal scholars, and

behavioral scientists. In general the participants defended a teleological view of punishment and rejected the retributivist and deontological views, although the latter position was not wholly without support.

FARBER, Marvin (ed) and Sellars, Roy (ed) and Mc Gill, V J (ed). *Philosophy For The Future: The Quest Of Modern Materialism*. NY Macmillan 1949.

This book presents a defence of metaphysical materialism. It urges this doctrine as the only one compatible with the existing scientific account of man and the cosmos, and predicts that future developments in the sciences will continue to validate a materialistic world view.

FARBER, Marvin. *Basic Issues Of Philosophy: Experience, Reality, And Human Values*. NY Harper & Row 1968.

The theme of the present book is the nature of philosophy as a historically conditioned mode of thought. The book is concerned with the total philosophic enterprise, and combines features of an independent treatise with those of an introduction to philosophic thought. Included among the topics discussed are the nature and function of philosophy; philosophy and the methods of inquiry; experience and the problems of philosophy; questions and methods in philosophy; experience and knowledge; monism and pluralism; existence and its interpretation; human existence and its interpretation; approaches to a philosophy of values; problems of the philosophy of religion.

FARBER, Marvin. *Naturalism And Subjectivism*. Springfield IL Thomas 1959.

The issues between naturalism and subjectivism are brought into sharp focus, mainly through a critical examination of Husserl's phenomenology, with the author defending not only naturalism, but the view that only by a pluralism of methods can an adequate philosophy of experience be attained. Farber criticizes Husserl for failing to recognize that his method, rather than experience itself, generates some of the problems he attempted to solve. The movement from subjectivism to "irrationalism," (Farber's term for existentialism), is briefly accounted for by considering Heidegger, Jaspers, Marcel and Sartre.

FARBER, Marvin. *Phenomenology And Existence: Toward A Philosophy Within Nature*. NY Harper & Row 1967.

The treatment of existence as a philosophical problem provides the crucial test for a subjective philosophy. Among the topics included are the role of reflection in phenomenology; descriptive philosophy and the nature of human existence; the philosophical interest in existence; the existence of the world; phenomenology and metaphysics; the life-world; the vehicle of transcendence; philosophical anthropology and human values; the reaches of subjectivism; standpoint commitments in philosophy.

FARBER, Marvin. *The Aims Of Phenomenology: The Motives, Methods, And Impact Of Husserl's Thought*. NY Harper & Row 1966.

FARBER, Marvin. *The Foundation Of Phenomenology: Edmund Husserl And The Quest For A Rigorous Science Of Philosophy*. Cambridge Harvard Univ Pr 1943.

This book is the study of Edmund Husserl's thought available in English but a standard work on the development of phenomenological philosophy up to and including the Logical Investigations. The author states in the preface that it was his aim to combine freedom of presentation in rendering Husserl's thought with exactness for meaning.

FARBER, Marvin. Logical Systems And The Principles Of Logic. *Phil Sci* 9,40-54 Ja 42.

FARBER, Marvin. Max Scheler On The Place Of Man In The Cosmos. *Phil Phenomenol Res* 14,393-399 Mr 54.

FARBER, Marvin. Modes Of Reflection. *Phil Phenomenol Res* 8,588-600 Je 48.

FARBER, Marvin. On Unity And Diversity. *Phil Phenomenol Res* 6,547-553 Je 46.

FARBER, Marvin. Pervasive Subjectivism. *Phil Phenomenol Res* 25,527-533 Je 65.

The various forms of subjectivism proceed from the *Cogito* or acknowledge its primacy. That allows for considerable ingenuity of operations while insuring a basic relatedness in the outcome. The need to account for the world on that basis presents the most serious difficulty to pure subjectivism. Covert or mixed forms of that philosophy face the same difficulty insofar as the principle of subjectivity is assumed. Merleau-Poncy is of interest in this connection. The critical reaction that has developed has been due to the unresolved difficulties, as illustrated by Fink; but also to the many functions philosophy must perform.

FARBER, Marvin. Professor Reulet On "Being, Value, And Existence". *Phil Phenomenol Res* 10,85-89 S 49.

FARBER, Marvin. Remarks About The Phenomenological Program. *Phil Phenomenol Res* 6,1-10 S 45.

FARBER, Marvin. The Function Of Phenomenological Analysis. *Phil Phenomenol Res* 1,431-441 Je 41.

FARBER, Marvin. The Phenomenological Tendency. *J Phil* 59,429-438 Ag 62.

This is a criticism of Herbert Spiegelberg's book, *The Phenomenological Movement*. Some of the principal objections are: (a) that the text betrays a marked antisocial bias; (b) that the lines delimiting phenomenology are extended in the book so far that persons having no ascertainable knowledge of Husserl are drawn into the "movement"; (c) that the attempt at a "personal profile" of Husserl falls short of the desired mark, partly because of Spiegelberg's inadequate direct knowledge; and (d)

that the story of Husserl's relation to Heidegger is not really told, in important respects.

FARBER, Marvin. The Phenomenological View Of Values. *Phil Phenomenol Res* 24,552-560 Je 64.

There is an emphasis here on the way values appear in experience and on the concrete events which manifest themselves in the process of experience. It is argued that valuation is grounded in reason; the rational subject is the subject establishing the ethical world. A rationally grounded agreement concerning valuation and willing is a necessary condition for a harmonious social life, according to Husserl.

FARLEY, Edward. *Ecclesial Man: A Social Phenomenology Of Faith And Reality*. Philadelphia Fortress Pr 1975.

Farley's book is a phenomenological analysis of that form of human intersubjectivity (ecclesial existence) which takes its rise from the preconscious intention by which people of faith apprehend each other.

FARLEY, Edward. *The Transcendence Of God: A Study In Contemporary Philosophical Theology*. Philadelphia Westminster Pr 1960.

The author examines the views of contemporary thinkers who regard God as transcendent but not supernatural: Niebuhr (God as transcendent source), Tillich (God as transcendent ground), Heim (God as a metaphorically transcendent dimension), Hartshorne (God as transcendent superiority), and Wieman (God as transcendent function). He concludes that God is transcendent in two senses: (1) a strictly natural sense, in which human experience in and of itself discovers and experiences God as the limit (the beginning and the end, the height and the depth), and (2) a sense in which God reveals himself as the transcendent redeemer (the creator, the preserver, the fulfiller, and the holy).

FARLEY, Paul Mary and Mc Glynn, James V. *A Metaphysics Of Being And God*. Englewood Cliffs NJ Prentice-Hall 1966.

This is a text book of traditional scholastic metaphysics brought up to date with quotations from modern existentialists. It opens with a brief history of the metaphysical problem as the Greeks understood it, then it treats of the theory of act and potency. The importance of causality is established with the traditional arguments for the existence of the primary being or, as the authors say, pure existence. McGlynn considers how we know this pure existence and how the pure existence operates. Finally, the transcendentals, unity and truth, and goodness and beauty are discussed with a treatment of the problem of evil.

FARNSWORTH, Paul R. *Musical Taste: Its Measurement And Cultural Nature*. Stanford CA Stanford Univ Pr 1950.

This brief volume contains the author's judgments concerning the nature of musical taste. He concludes "that musical taste is a phenomenon of the social sciences, rather than a conglomeration of chance responses or a set of absolutes. Like all other folkways, musical taste is peculiar to a particular group of people, a particular place, and a particular period of history. No music, then, can be inherently good or bad, for goodness is only an evaluation by a group of men trained to accept a particular set of standards." In developing this relativistic position, the author has utilized basically quantitative methods in his analysis of value judgments.

Politics are fundamental to Santayana's thought, in line with his general insistence that matter undergirds spirit and that humanism must be grounded in a sound philosophy of nature. Political science, a branch of physics, is distinguished from political philosophy, which, being purely ideal, is a branch of dialectics. In any humane polity, both these disciplines must be subordinate to the art of government, a branch of wisdom.

- FEIBLEMAN, James K.** *An Introduction To Peirce's Philosophy.* NY Harper 1946.
- FEIBLEMAN, James K.** *Mankind Behaving: Human Needs And Material Culture.* Springfield IL Thomas 1963.
The author attempts "to account for the entire man in terms not only of this principal needs but also of the culture he has produced out of the materials available to him in his environment." Man has the same basic tissue—needs, such as food and sex, as do the lower animals. In addition man shares with other animals the investigatory and defense reflexes. Considerable emphasis is also put on the need to do, which in man includes the need to say. Responses to the various needs include scientific and philosophic systems, tools and cities, the arts and religion.
- FEIBLEMAN, James K.** *Religious Platonism: The Influence Of Religion On Plato And The Influence Of Plato On Religion.* NY Macmillan 1959.
- FEIBLEMAN, James K.** *The Pious Scientist: Nature, God And Man In Religion.* NY Bookman Associates 1958.
A skeptical and agnostic type of religion is advocated with "half belief" and "half attachment." "A rational society will never have its appropriate religion until mass skepticism becomes a possibility." The author suggests that "God is the reason for nature (including man)," but "We must perforce go through nature to the reason for nature...." Man is wholly a part of nature and "What we need is a reconciliation with insignificance and the peculiar combination of dignity with humility which it brings."

FEIBLEMAN, James K. Artifactualism. *Phil Phenomenol Res* 25,544-559 Je 65.

The two factors which played the largest role in human evolution were languages and material tools. The philosophical study of languages has been vigorously pursued by Wittgenstein and his followers, but the equally important philosophical study of material tools has been neglected. Civilized man lives in a world largely composed of material tools. He has altered everything in his immediate environment. He has brought this development to the point where he is now a victim of it, for he responds to the stimuli of the artifacts with chain-learned behavior. The process of evolution should be accelerated rather than stopped by this development, but we do not yet know where it will take us. We shall not be on top of the problem until we have acquired the ability to plan tools in terms of the anticipated conditioning to which they will subject us.

FEIBLEMAN, James Kern. *Ontology*. Baltimore Johns Hopkins Pr 1951.

FEIBLEMAN, James Kern. *The Quiet Rebellion: The Making And Meaning Of The Arts*. NY Horizon Pr 1972.

This book is a collection of fourteen papers. In general, the author is more concerned with art and artists than with what philosophers of art have said about art. When the author does address himself to problems of current interest in aesthetics, his results are unusual, to say the least.

FEIBLEMAN, James Kern. *The Reach Of Politics*. NY Horizon Pr 1969.

The aim here is to determine the nature of politics. To reduce organ-specific needs and to survive, man tries to alter his material environment, i.e., to be aggressive in violent, destructive ways or peaceful, constructive ways.

FEIBLEMAN, James Kern. *The Revival Of Realism: Critical Studies In Contemporary Philosophy*. Chapel Hill Univ Of N Car Pr 1946.

Realists "refuse to distinguish with respect to reality between being and existence." Nominalism is the theory that the sole reality consists of actual physical particulars." In philosophy, Pierce has been mistakenly claimed by nominalists, pragmatists, and instrumentalists. His actual position is a realism closely related, as he said, to Duns Scotus. Whitehead's philosophy of organism implies realism in the distinction between "actual entities" and "eternal objects." Dewey's position is attacked in order to defend realism—his absolute skepticism is nonetheless an absolute.

FEIBLEMAN, James K. Was Spinoza A Nominalist? *Phil Rev* 60,386-389 Jl 51.

FEIBLEMAN, James. *Aesthetics; A Study Of The Fine Arts In Theory And Practice*. NY 1949.

The author discusses speculative and practical aspects of aesthetics. He assumes that beauty and art have objective reality and that they must therefore be viewed ontologically. Accordingly, the author's theory of being is developed early in the book. He terms it "axiological realism." Throughout the volume there is an obvious emphasis on the necessity for definition of terms. His definitions of beauty, art, tragedy, etc., will be of much interest to all concerned with this branch of philosophy. There are many examples of the theory contained in the book.

FEIBLEMAN, James. *An Introduction To Peirce's Philosophy, Interpreted As A System*. NY Harper 1946.

This work includes a one-chapter biography of Peirce and a chapter on the logical development of his thought, the final ambition of which was "nothing less than to supplant Aristotle" by establishing a new set of categories that would include Aristotle's philosophy and that of modern science. The concluding chapters trace realism from Plato to Peirce, offer a comparison between Whitehead and Peirce, and claim that Peirce's "open system" of realism points the way of philosophy into the indefinite future.

FEIBLEMAN, James. *Positive Democracy*. Chapel Hill Univ Of N Car Pr 1940.

Mr Feibleman has written a serious and probing book on the philosophical foundations of democracy. The thesis, as suggested by the title, is that democracy is too often thought of as a negative thing whereas the need of our day is that of formulating a positive doctrine. One requisite for doing this is to make a clear distinction between the historical associations of democracy and the logical bases of democracy. For example, democracy in the Western world has been associated historically with the philosophy of nominalism, but nominalism is not a logically necessary foundation of democracy. Indeed the democracy of today and tomorrow not only can, but must, repudiate nominalism and recognize the reality of society as well as the reality of individuals. Furthermore, Mr Feibleman believes that mutual tolerance among skeptics is not a sufficient foundation for the democratic way. He therefore argues for a realistic theory of knowledge in which the existence of objective truth is recognized. This argument is personalized in calling for an adherence to the pragmatism of Peirce rather than that of James.

FEIGL, Herbert (ed) and Maxwell, Grover (ed). *Current Issues In The Philosophy Of Science, Symposia Of Scientists And Philosophers*. NY 1961.

This volume includes almost all the prepared essays, comments, and rejoinders then presented, in some cases revised and expanded. The participants are "philosophically oriented scientists" or "scientifically trained philosophers." The main topics are "Theory Construction in Logical and Historical Perspective," "Empirical and Conventional Elements in Physical Theory," "Induction, Probability, and Simplicity," "The Logic of Variables and Constants," "Philosophical Issues of Quantum Theory," "Methodological Problems of Psychology and the Social Sciences."

FEIGL, Herbert (ed) and Maxwell, Grover (ed). *Scientific Explanation, Space, And Time*. Minneapolis 1962.

This volume is the product of intensive discussions held at the Minnesota Center for the Philosophy of Science. It concentrates upon the philosophy of physics; though some of the articles are relevant to psychology and history.

FEIGL, Herbert (ed) and Scriven, Michael (ed). *The Foundations Of Science And The Concepts Of Psychology And Psychoanalysis*. Minneapolis Univ Of Minn Pr 1956.

FEIGL, Herbert (ed) and Scriven, Michael (ed) and Maxwell, Grover (ed). *Concepts, Theories, And The Mind-body Problem*. Minneapolis MN Univ Of Minn Pr 1958.

FEIGL, Herbert. *The Mental And The Physical: The Essay And A Postscript*. Minneapolis 1967.

FEIGL, Herbert. A Note On Justification And Reconstruction. *Phil Stud* 9,70-72 1958.

This article considers the "vindication" of principles of justification in ethics and in empirical science and the basis for the reconstruction of knowledge which would follow from these principles. He suggests the most illuminating reconstruction of the justifying arguments in either domain consists in first delimiting the domain of discourse by a statement of its defining criteria, and then exploring by the method of entailed consequences.

FEIGL, Herbert and Maxwell, Grover. Why Ordinary Language Needs Reforming. *J Phil* 58,488-497 Ag 61.

The authors contend that ordinary language needs reforming for three reasons: (1) there is the need to abstract and systematize, (2) mere examination of ordinary use will not reveal rules of analysis, and (3) implicit rules that are present in ordinary language may indirectly reflect beliefs which are false. They claim that ordinary language is often the first word in any philosophical investigation, but that the philosopher will then begin to reform ordinary language.

FEINBERG, Gerald. Physics And The Thales Problem. *J Phil* 63,5-16 Ja 66.

It is argued in this paper that the problem of the structure and composition of bulk matter, probably the central problem in physics throughout its history, has now been solved. The solution lies in the description of matter as being composed of nuclei and electrons, and the understanding that these objects follow the laws of quantum mechanics. Several historical stages in the development of this solution are traced. The properties of the elementary particles which are being intensively studied by contemporary physicists are shown to be mainly irrelevant to the understanding of the structure of bulk matter. Finally it is suggested that a problem that may become a central problem for future physics is that of the effect of the universe at large on objects inside the laboratory.

FEINBERG, Joel. *Social Philosophy*. Englewood Cliffs NJ Prentice-Hall 1973.

This book is an introduction to social philosophy in the Prentice-Hall "Foundations of Philosophy" series. It deals with conceptual and normative issues, but not with questions of methodology in the social sciences. Its chapters could be grouped under three main headings: Liberty ("The Concept of Freedom," "Grounds for Coercion," "Hard Cases for the Harm Principle"), Rights ("Legal Rights," "Conflicts of Legal Rights," "Human Rights") and Justice ("Social Justice"). The primary normative questions investigated under these headings are those whose answers take the form of "liberty-limiting principles" (especially that of J S Mill), lists of human rights (particularly the United Nations "Declaration") and material principles of economic justice (including those associated with Hobhouse, Proudhon, and Rawls).

FEINBERG, Joel. "Causing Voluntary Actions" in *Metaphysics And Explanation*, W H Capitan And D D Merrill (eds), 29-47. Pittsburgh Pittsburgh Univ Pr 1966.

The purpose of this paper is to argue, in opposition to Hart and Honoré, that there is no conceptual barrier imposed by common sense to our speaking of the causes of voluntary actions. It argues by means of hypothetical examples and counterexamples that the "voluntary intervention principle" for tracing causal consequences of actions, while adequate in many cases, fails in others, and that the principle that repeats its successes and avoids its failures is that the more expectable is human behavior, whether voluntary or not, the less likely it is "to negative causal connection" between another's act and a given result, and that when the stakes are high, consequences will be traced right back through a voluntary act, provided only in retrospect it seems not highly extraordinary that it intervened.

FEINBERG, Joel. "Justice And Personal Desert" in *Nomos VI: Justice*, C J Friedrich And J W Chapman (eds), 69-97. NY Atherton Pr 1963.

This analysis of what it is to deserve something concludes that desert is a "natural" moral notion, not logically tied to institutions and rules, and that it represents only a part of the domain of justice. Throughout the essay "desert-bases" are contrasted with "qualification-conditions." Among the deserved modes of treatment considered are awards of prizes, grades, rewards, punishments, praise, blame, and compensation. The final section rejects the view that social utility could ever be a

plausible basis for desert, and discusses some of the unfortunate consequences of treating personal desert as a kind of "moral entitlement."

FEINBERG, Joel. "On Justifying Legal Punishment" in *Nomos III: Responsibility*, C J Friedrich (ed), 152-167. NY Liberal Arts Pr 1960.

This article was the author's contribution to a symposium on the topic "Is Punishment Obsolete?" It proposes a definition of legal punishment in which the notion of a "requisite" has a central place. Then it describes principles of a combined utilitarian—equalitarian kind for evaluating political and social institutions. Finally, it applies these principles to legal punishment and its main alternatives to demonstrate the superiority of the former. It concludes by rebutting the argument that punishment is incompatible with determinism, by claiming that determinism rules out only "self-righteous anger," and by contrasting the latter with genuine moral indignation.

FEINBERG, Joel. Comments On Richard Wasserstrom's "Rights, Human Rights And Racial Discrimination". *J Phil* 61,641-644 O 64.

This essay consists of critical comments on Richard Wasserstrom's "Rights, Human Rights, and Racial Discrimination" presented in a symposium on "Human Rights" at the 1964 meeting of the Eastern Division of the American Philosophical Association. These comments are presented from a position of basic agreement with Wasserstrom's central thesis that there are fatal moral flaws in the substitution of a blend of noblesse oblige and benevolence for the acknowledgement of human rights. The essay rejects, however, Wasserstrom's account of what it is to have a right, the relation between having a right and acting rightly, and various other details in his argument to an "importantly correct" conclusion.

FEINBERG, Joel. Duties, Rights, And Claims. *Amer Phil Quart* 3,137-144 Ap 66.

The first part of this paper examines ten kinds of duties with the aim of distinguishing those that are clearly correlated with other people's rights from those that apparently are not. In the former class are placed duties of indebtedness, commitment, reparation, need-fulfillment, reciprocity, respect, and community membership. In the latter class are duties of status, obedience, and "compelling appropriateness." The second part of the paper shifts the focus to rights and argues that there is at least one kind of talk about rights—as-claims that is neither reducible to, nor in any clear logical relation with talk about duties. The paper concludes that the idea of a claim is essential both to the understanding and to the just appreciation of rights.

FEINBERG, Joel. On Being "Morally Speaking A Murderer". *J Phil* 61,158-170 F 64.

This article is a reply to a charge in G E M Anscombe's "Two Kinds of Error in Action" that my contention that "murder is a legal concept" has morally unappealing consequences. I maintain that 'murder', like other "legal-like" concepts, has legitimate non-legal uses the understanding of which requires reference to a basic analogy to a legal model and the differentiating contrast signalled by the word 'moral'. (Compare 'moral partnership', 'moral right', etc). I then suggest that Miss Anscombe may have committed "the legalistic mistake" made by one who, in posing a moral question using a legal-like term, uncritically imports the precision of that term in its strict legal sense, while excluding appeal to the kinds of criteria that alone can decide its use.

FEINBERG, Joel. Problematic Responsibility In Law And Morals. *Phil Rev* 71,340-351 Jl 62.

This paper argues that efforts to analyze "moral responsibility for results" by restricting its application to an inner world must fail. Problematic cases directly analogous to those that sometimes confront law courts investigating liability for harm can arise for the "court of conscience" too, even though it has access to all the facts. And since the inner court, on this conception, is forever barred from appealing to policy, convenience, and the like, questions of moral responsibility can be altogether ineluctable. Moreover, the incurrance of or escape from moral responsibility, on this conception, can be as much a matter of luck as in law.

FEINBERG, Joel. Supererogation And Rules. *Ethics* 71,276-288 Jl 61.

It is argued in this paper that jural laws and institutional "house rules" are poor models for understanding all counsels of wisdom (which use the word 'ought') and all forms of human worth. In particular it is misleading to interpret all acts that go "beyond duty" on the model of certain familiar institutional oversubscriptions. An analysis of supererogation as "meritorious, abnormally risky non-duty" is then proposed. Finally, the distinction between the institutional and non-institutional complexes of concepts is clarified, and the question which of the two is "distinctively moral" is dismissed as resting on an ambiguity.

FEINBERG, Joel. The Expressive Function Of Punishment. *Monist* 49,397-423 Jl 65.

This article is an essay on the problem of defining "punishment" that begins by asking what it is that distinguishes "punishment in a strict and narrow sense" from other types of penalties. It concludes that the distinguishing element is the reprobative symbolism of punishment. The paper discusses the theory of punishment as condemnation, some derivative symbolic functions of punishment (authoritative disavowal, symbolic non-acquiescence, vindication of the law, absolution of others), the constitutional distinction between regulative and punitive sanctions, strict criminal liability, and the shortcomings of certain forms of the retributive theory of the justification of punishment.

FELL JOSEPH P. *Emotion In The Thought Of Sartre*. NY Columbia Univ Pr 1965.

This is a careful, critical, scholarly treatment of the development of Sartre's phenomenology of the emotions. Part I traces the 1939 *Esquisse* and the 1940 *L'Imaginaire* in which Husserlian influence is marked while Part II is a full analysis of emotion in the 1943 *L'Être et le néant*. The author points out that since Sartre's phenomenological description resorts to causal and genetic explanations of the irreducibly motivational character of human behavior, the limits of the applicability of phenomenological method are shown. Part III, A Critical Examination of Sartre's Theory, confronts the results with current philosophical, psychological and psychoanalytic theories—with particular reference to Whitehead, James and Dewey. Fell's principal conclusion is that "Sartre is only able to see emotion as fictive idealism because he has identified emotion with thought. The entire burden of our critique has been to show that emotion is not an act of consciousness," and he attributes Sartre's mistake to the false separation of human from inhuman behavior.

FENDRICH, Joseph Lowrey. *Science Discovers God*. NY Dodd Mead 1949.

FÈNG, Yu-lan. *A Short History Of Chinese Philosophy*, Derk Bodde (ed). NY Macmillan 1948.

This book represents a brief and systematic account of Chinese philosophy from beginnings to the present day. After introductory chapters on the spirit and background of Chinese philosophy, Dr Fung treats in succession of the origin of the schools, Confucius, Mo Tzu and the Mohists, Taoism and Yang Chu, Mencius and idealistic Confucianism, the school of Names, and later schools of Taoism including Lao Tzu and Chuang Tzu. Then follow chapters on the Later Mohists, the Ying-Yang Interactionists, the Realistic Confucianism of Hsun Tzu, the Legalists and Confucianist Metaphysics. The next chapter, World Politics and World Philosophy, treats mainly of Chinese Eclecticism, and is followed by chapters on Tung Chung-Shu, the ascendancy of Confucianism and the revival of Taoism, Neo-Taoism, Chinese Buddhism, Ch'anism, Neo-Confucianism, and the introduction of Western philosophy. In a final chapter, Dr Fung discusses Chinese philosophy in the modern world and its contribution to a future world philosophy.

FENN, William Wallace. *Theism: The Implication Of Experience* (ed By Dan Huntington Fenn). Peterborough NH Noone House 1969.

This volume is a compilation of notes collected from Professor Fenn's lectures. Fenn rejected the normative supernaturalisms that came to New England from the Puritan Calvinistic traditions; on the other he attempted to adapt his belief in the moral nature of reality to the evolutionists, materialists, skeptics, pantheists, and even the process philosophies.

FERGUSON, Arthur B. Renaissance Realism In The "Commonwealth" Literature Of Early Tudor England. *J Hist Ideas* 16,287-305 Je 55.

FERGUSON, Donald N. *Music As Metaphor: The Elements Of Expression*. Minneapolis 1960.

This book tries to account for the expressive properties of music. It asks how expression in music is realized and how it creates valuable experience, i.e., makes experience significant. Music is metaphoric in that it exhibits the significance of experience through an aural medium. Expression is defined as "the intelligible utterance and communication of a mental state." After a statement of how traditional criticism has dealt with music, the book moves on to discuss beauty, form and content, and expression in music. It is clearly pointed out that form and content must be considered individually if the peculiar value of music is to be understood. But

the affective substance of music can be realized both as a fact of expression and as a fact of form. How the elements—tone stress, and ideal motion—of music function is examined in two chapters. The book concludes with a second discussion of criticism, now with the benefits of the author's arguments in mind, and with a brief statement about recent trends in composition including the twelve-tone system.

FERRARI, Leo. "Abstractio Totius" And "Abstractio Totalis". *Thomist* 24,72-89 Ja 61.

This article deals with the scholastic notion of abstraction proper to the philosophy of nature. The question of whether Aquinas' *abstractio totius* was to be identified with Cajetan's *abstractio totalis* (as the latter claimed) became a source of controversy in the scholastic tradition. Some (including Maritain) supported Cajetan's claim. A detailed examination of the characteristics of both manners of abstraction produces at least nine definite characteristics which militate against the claimed identity.

FERRATER MORA, José. *Philosophy Today: Conflicting Tendencies In Contemporary Thought*. NY Columbia Univ Pr 1960.

FERRATER MORA, José. *The Idea Of Man: An Outline Of Philosophical Anthropology*. Lawrence Univ Of Kansas 1961.

The "outline" takes the form of an inquiry terminating in a tentative definition of man. Altering a traditional formula, the author proposes to define man as "an individual substance of a historical character."

FERRATER MORA, José and Harris, Errol E and Prior, A N. *The University Of Kansas Lectures: "The Idea Of Man," "Analysis And Insight," And "Changes In Events And Changes In Things"*. Lawrence Univ Of Kansas 1961.

Ferrater Mora's paper is devoted to the thesis that man makes his own life—a person constituting himself historically. Harris's lecture is a two-pronged attack on contemporary analytic philosophy. One part of the argument attempts to show that the enterprise is self-refuting, based on an epistemology of naive positivistic empiricism which most of its present proponents have themselves rejected. The other part of the argument is ad hominem, showing the urgent necessity for a synthetic and constructive philosophy which will be able to develop a way of life and system of values capable of stemming the drift toward nuclear self-annihilation. Prior, starting with the MacTaggart-Broad time puzzle and digressing backward through St Augustine, offers an adverbial analysis of time and tenses, based on the theory that there are only things, not events, and that things are present tense, when they are.

FERRÉ, Frederick. *Language, Logic And God*. NY Harper 1961.

An attempt to fill the "need for an introduction to contemporary linguistic philosophy as it bears on theological discourse." The rise of linguistic philosophy and one of its two major movements—"verificational analysis"—is briefly set forth. While value is seen in this movement's analysis of theological discourse, its claim to have eliminated it is rejected. The limitations of this movement are described, and a "more flexible analytical approach" is found in the second movement, "functional analysis." Theological views of the language of theism representing three major logical traditions are then examined for strengths and weaknesses. Functional analyses claiming to show the "improper," the "familiar," and the "unique" functions of theological discourse are then examined. A concluding chapter offers the author's sketch of how theological discourse might better be appreciated if viewed within "a wider understanding of linguistic signification."

FERRÉ, Frederick and Bendall, Kent. *Exploring The Logic Of Faith, A Dialogue On The Relation Of Modern Philosophy To Christian Faith*. NY Association Pr 1962.

Writing successive sections in response to each others' contentions two philosophers concern themselves with exploring the conditions under which theological claims (and, in particular, Christian claims), to knowledge would have cognitive value. The knowledge—value of the language of faith, the nature of religious language, and the claims of genuine philosophical inquiry are analyzed with a view to discovering an interplay that would be fair to each in the quest for truth.

FERRÉ, N F S And Others (eds.). *Paul Tillich: Retrospect And Future*. NY Abingdon Pr 1966.

In this collection, a professor of philosophy and four theologians appraise Tillich's main ideas.

FERRÉ, Nels F S. *The Finality Of Faith And Christianity Among The World Religions*. NY Harper & Row 1963.

This book is divided into two parts. These are entitled: "The finality of Faith" and "Christianity Among the World Religions." Faith, the author finds, must be final because answers to ultimate questions are beyond the reach of man's intellectual powers. Part Two of the text is a collection of four essays, two of which discuss Christianity as a world-faith, and the remaining ones give the author's reactions to the doctrinal basis of the World Council of Churches and to Christian Missions.

FERRÉ, Nels Frederick Solomon. *Christianity And Society*. NY Harper 1950.

FERRÉ, Nels Frederick Solomon. *Faith And Reason*. NY Harper 1946.

FERRÉ, Nels. *Evil And The Christian Faith*. NY Harper 1947.

FERRÉ, Nels. *Reason In Religion*. NY Nelson 1963.

"Reason" means identifying, discriminating, evaluating, interpreting, testing, and ordering experience. "Religion" means the conviction that there are powers beyond ordinary experience that can help or harm man. Religious faith as trust "engenders the creative use of reason, whereas faith as choice and commitment calls forth the descriptive and the critical powers of reason."

FERREE, George. *Beliefs And Words*. *Educ Theor* 17,325–328 O 67.

FERREE, George. *The Development And Substance Of John Dewey's Religious Thought*. *Educ Theor* 10,50–56 Ja 60.

FESTUGIÈRE, André-Jean. *Personal Religion Among The Greeks*. Berkeley Univ Of Calif Pr 1954.

Making ample use of a distinction between popular piety and reflective piety, he examines successively such matters as the simple intimacy between Hippolytus and Artemis, the Greek conception of union with the Divine Principle, the significance of retirement and isolation for the achieving of personal insight, private religious experience in Apuleius and Aelius Aristides, the Stoic account of man's relation to the Cosmos, and, finally, the Platonic and Neo-Platonic ascents to the supreme vision of God.

FETZER, James H. *Philosophy Of Science Versus Psychology Of Science*. *American Psychologist* 27,662–665 Jl 72.

This commentary is directed to the issue of whether or not and, if so, in what sense the philosophy of science may appropriately be displaced by the psychology of science. The author seeks to clarify the role of the philosophy of science as involving, in part, a search for an ideal standard against which to measure the adequacy of any purported explanation (of human behavior or otherwise), independently of consideration for either (a) whether those explanations happen to be believed by anyone or not, or (b) whether or not they conform to the criteria employed by the professional psychological community. These reflections support the conclusion that philosophical investigations of and psychological research into the character of science are distinctive theoretically and methodologically.

FEUER, L S. *Indeterminacy And Economic Development*. *Phil Sci* 15,225–241 Jl 48.

FEUER, Lewis S. *The Scientific Intellectual: The Psychological And Sociological Origins Of Modern Science*. NY Basic Books 1963.

This book is an account of the rise of the scientific intellectual, the "new philosophy" that inspired him, and the underlying emotions that created him. Challenging the Weber-Merton thesis that the scientific intellectual is an offspring of Protestant asceticism, the author argues that a "hedonistlibertarian" psychological revolution was the necessary condition of his appearance.

FEUER, Lewis S. *A Neo-Marxist Conception Of Social Science*. *Ethics* 70,237–240 Ap 60.

FEUER, Lewis Samuel. *Psychoanalysis And Ethics*. Springfield IL Thomas 1955.

The author undertakes to determine whether "the values of liberal civilization are strengthened or undermined by the methods of psychoanalysis," arguing that the contents of the unconscious provide the means for deciding whether values are expressive or repressive, authentic or inauthentic. Part Two attacks Freud's philosophy of civilization, maintaining that the sense of guilt is not primordial but socially conditioned.

FEUER, Lewis S. *Causality In The Social Sciences*. *J Phil* 51,681–694 N 54.

FEUER, Lewis S. *Political Myths And Metaphysics*. *Phil Phenomenol Res* 15,332–350 Mr 55.

FEUER, Lewis S. *Rejoinder On The Principle Of Simplicity*. *Phil Sci* 26,43–45 Ja 59.

FEUER, Lewis S. *Sociological Aspects Of The Relation Between Language And Philosophy*. *Phil Sci* 20,85–100 Ap 53.

FEUER, Lewis S. *The Bearing Of Psychoanalysis Upon Philosophy*. *Phil Phenomenol Res* 19,323–340 Mr 59.

Psychoanalysis tends to dissolve "principled philosophies." Principles have been regarded as self-evident by their defenders; however, it is argued here that this self-evidence is psychological, not a logical kind. The author concludes that psychoanalysis teaches us to see every philosophy as one which could express our own selves under certain conditions and moods. No philosophy is so strange, so outlandish, but that we might have held it.

FEUER, Lewis S. *What Is Philosophy Of History?* *J Phil* 49,329–339 My 52.

FEUER, Samuel Lewis. *Spinoza And The Rise Of Liberalism*. Boston Beacon Pr 1958.

Spinoza's role in 17th century revolutionary movements is presented in this book. It presents "three stages of Spinoza's political development... youthful Utopian religious communist... mature Republican partism... chastened political scientist." The author has "tried to understand the various components of Spinoza's thought as the outcome of underlying emotional responses to the social conflicts of his time, and to portray his philosophy as a human document, a landmark in man's efforts to solve the problem of human freedom." Spinoza's influence on European political philosophy, his effort to relate his political philosophy to his metaphysics, and difficulties and inconsistencies in his thought are presented.

FEY, William R. *Philosophy And Theology In Cardinal Newman*. *Laurentianum* 1,60–81 1976.

John Henry Newman's nineteenth century defense of objective/certain truth in philosophy and theology throws light on the twentieth century discussion of philosophical and theological method. This article aims to clarify his argument against resting theology and philosophy on subjective commitments to particular world-views, reducing all truth to opinion, theory and probable conjecture. Newman's own writings are used to show how his notion of philosophy and theology derive from his understanding of reason and faith respectively. It is argued that revelation, like cognitive experience, is recalcitrant, providing a measure of truth.

FEYERABEND, P K. *A Note On The Paradox Of Analysis*. *Phil Stud* 7,92–96 1956.

FEYERABEND, P K. *Metascience*. *Phil Rev* 70,396–405 Jl 61.

Feyerabend reviews Mario Bunge's *Causality and Metascientific Queries*. The first book he praises for its discussion of the role of causality in the sciences. He criticizes *Metascientific Queries*, a book on the principles of scientific method, for its lack of coherence and its failure to offer arguments for the points of view presented.

FEYERABEND, P K. *Patterns Of Discovery*. *Phil Rev* 69,247–252 Ap 60.

FEYERABEND, Paul K (ed) and Maxwell, Grover (ed). *Mind, Matter, And Method*. Minneapolis 1966.

This *festschrift* for Herbert Feigl contains essays by philosophers, psychologists, psychoanalysts, and physicists. The first ten essays concern philosophy of mind, with special emphasis on the mind-body problem. The second group of eleven essays deal with philosophical method, with special emphasis on introduction and confirmation. The third group of five essays concerns the philosophy of the physical sciences.

FEYERABEND, Paul K. *A Note On The Problem Of Induction*. *J Phil* 61,349–352 Je 64.

FEYERABEND, Paul K. *On The "Meaning" Of Scientific Terms*. *J Phil* 62,266–273 My 65.

In previous writings the author has attacked the principle of meaning invariance according to which the progress of science leave(s) untouched the meanings of at least some descriptive terms and he has argued that total upheaval is preferable to piecemeal reconstruction. He has also tried to develop a methodology in which theories, and not only experimental results, are used for the criticism of accepted points of view. This dual enterprise was attacked on the grounds that theories could not compete unless they had some meanings in common. The present paper tries to show that this is not so and why it is not so; and it also uses a concrete example to elucidate the general argument.

FEYERABEND, Paul. *Against Method: Outline Of An Anarchistic Theory Of Knowledge*. Atlantic Highlands NJ Humanities Pr 1974.

FEYERABEND, Paul. *Materialism And The Mind-Body Problem*. *Rev Metaph* 17,49–66 S 63.

Maintaining that the proper task of philosophy is to encourage the invention and refinement of new theories, the author defends materialism against three popular arguments. The first holds that materialism is inconsistent with ordinary usage and so cannot meaningfully be applied to human beings; the second argues from observation that thoughts are not material processes; the third asserts that people are directly acquainted with their own mental experiences. The author examines the logic and motivation of these arguments and concludes there is no reason to abandon the attempt to give a purely psychological account of human beings.

FEYERABEND, Paul. *Mental Events And The Brain*. *J Phil* 60,295–296 My 63.

FEYERABEND, Paul. *Reichenbach's Interpretation Of Quantum-Mechanics*. *Phil Stud* 9,49–59 1958.

The author gives seven arguments against the Reichenbach-Putnam attempt to

interpret quantum mechanics on the basis of a three-valued logic. Concerning Putnam's suggestion that the application of three-valued logic to quantum mechanics will lead to fruitful new theories (as was the case when non-Euclidean geometry was applied to physics), the author argues that, on the contrary, important problems (how to relativize elementary quantum mechanics) are covered up, objectionable theories (elementary quantum mechanics) are preserved, and fruitful lines of research (attempts to find a general relativistic theory of micro-objects) are blocked.

FEYERABEND, Paul. Wittgenstein's *Philosophical Investigations*. *Phil Rev* 64,449-483 JI 55.

FEYS, Robert M. *Modal Logics*, Joseph Dopp (ed). NY Humanities Pr 1965.

This book was edited by J Dopp from a nearly completed manuscript of Feys, and Dopp has added a bibliography and interstitial material where required. Feys has tried to survey the whole range of modal logic with the exception of topological and algebraic interpretations of modal structures and operators.

FIERING, Norman S. President Samuel Johnson And The Circle Of Knowledge. *William And Mary Quarterly* 28,199-236 Ap 71.

Samuel Johnson of Stratford, Conn, was one of a handful of early American philosophers. All of his life he was concerned with the problem of how the disciplines are related to each other and how they may be logically ordered. The article traces Johnson's efforts with this problem from student days at Yale (1710-1714), when he was subservient to Ramist systems, to a schema that he drew up in 1771, shortly before he died. The most notable characteristic of these various "circles of knowledge" is the increasingly important place that moral philosophy assumed in them. In the end, Johnson considered even logic a branch of moral philosophy. The influence of Bacon, Locke, and others is treated, as is the broader cultural significance of what Johnson's philosophizing reveals.

FINDLAY, J N. *Hegel: A Re-examination*. NY Macmillan 1958.

This work is an interpretative study of the whole range of Hegel's thought, relating this to many contemporary trends. After three general chapters, of which the second deals with the notion of Spirit and the third with the Dialectical Method, there are two chapters dealing systematically with the Phenomenology of Spirit, three with the Logic, one with the Philosophy of Nature, and two with the Philosophies of Subjective and Objective Spirit respectively. A final chapter deals with the Philosophy of Absolute Spirit and assesses the system generally.

FINDLAY, J N. *Plato: The Written And Unwritten Doctrines*. NY Humanities Pr 1974.

FINDLAY, J N. *The Transcendence Of The Cave*. NY Humanities Pr 1967.

These lectures continue the philosophical problematic of *The Discipline of the Cave*, exploring in particular the perplexities which surround the abstract concepts, the impersonal values and the religious objects which form the 'higher furnishings' of the Cave. At this point an ascent is made, beginning at the chapter entitled "Otherworldly Geography," to the conception of a spectrum of states in which sensuousness, individual exclusiveness, spatio-temporality and personal opacity are gradually overcome, until a point of central simplicity is reached, which, however, has 'life-lines' extending to all Cave-phenomena, and in its own manner comprehends them all.

FINDLAY, J N. *Towards A Neo-neo-Platonism*. NY Quadrangle Books 1970.

This article emphasizes the great inversion involved in Platonism. Instead of making Forms parasitic upon instances, it made instances parasitic upon Forms. It did not erect the Forms into an order of things alongside of their instances, but made them be the realities of which their instances were only outflows. The causality of the Ideas is central to Platonism. The article studies the development of a dynamic Idea-theory in Neoplatonism and later in Hegelianism. But Hegel went astray in confining the operation of the Idea to this world and its history, and not recognizing the spectrum of disembodied, otherworldly states posited in Platonism.

FINDLAY, J N. "The Rationality Of Mysticism" in *Contemporary Studies In Philosophical Idealism*, 133-148. Cape Cod MA Stark 1975.

This article attempts a characterization of mysticism and the mystical, and finds this in the conception of a profound unity which underlies all differences and all oppositions and of which everything must be predicated *qua* this or *qua* that. But all intelligibility

in the world approaches this sort of mystical unity in varying degrees, and never realizes the diversity, contingency and independence posited in formal logic. The mystical is merely the ultimate, limiting form of the rational.

FINDLAY, J N. Essential Probabilities. *Phenomenology In America* Volume Unknown 1967.

This article contends that, just as there are (following Husserl) in every eidetic region, intuitable necessities which are not merely analytic, but which limit the facts in that region, so there also are, in each such region, many *a priori* probabilities which make such facts likely or unlikely. This is generally the case in the realm of the mind. There is, e.g., an *a priori* probability that one will try to do what one believes will lead to what one wants.

FINDLAY, J N. Hegel's Use Of Teleology. *Monist* 48,1-17 Ja 64.

The author examines and raises questions with regard to that aspect of Hegel's thought which enables us to understand him better than any other—his thoroughgoing teleology.

FINDLAY, J N. Metaphysics And Affinity. *Monist* 47,159 Ff 1963.

This article regards Metaphysics as a conceptual activity in which what appears, on a superficial view, to be possible or contingent, shows itself, on a deeper consideration, to be impossible or necessary, or to have, at least, only very unlikely instances or exceptions. It starts from a logic in which contingent independence is maximal, and progresses to one in which it has been rendered minimal, though never wholly eliminated. Such a method involves both boldness and caution in the predication of essential connections.

FINDLAY, J N. Recommendations Regarding The Language Of Introspection. *Phil Phenomenol Res* 9,212-236 D 48.

This article, after distinguishing sense-giving procedures from procedures which merely validate, attempts to sketch methods by which sense may be given to inner-life terms. Such methods must rest on a spontaneous use of analogy with what is publicly ostensible, such analogies being found acceptable by other introspecting subjects, e.g., the shifting focus of attention, the slow, dead heave of the will, etc. It then recommends that introspective talk should not be conducted in terms of a metaphorical central agent which does or undergoes things, nor in terms of a flux of thing-like elements, but rather in terms of "appearances," in which things display themselves in varying ways, often before no one in particular.

FINDLAY, J N. The Methodology Of Normative Ethics. *J Phil* 58,757-764 N 61.

The typical arguments of Ethics are not trivially deductive, but involve a stretching of attitudes to cover new cases. They argue from "This F is good" to "Any F is good," and hence, to "Being F is good," or from "I like X" to "I like my liking of X" and to "I like any liking of X." From an interest in concrete sorts of objects, we progress logically to an interest in an interest in such objects, and hence, to an interest in interestingness as such, and in whatever interests anyone, and in anyone who is interested in whatever interests anyone. The higher interests in universal happiness, power, freedom, fairness, virtue, aesthetic and scientific satisfaction can all be derived step by step, in some such manner.

FINDLAY, John N. *Psyche And Cerebrum*. Milwaukee Marquette Univ Pr 1972.

This article distinguishes three dimensions of intelligent, conscious being—in the world: the behavioural, the phenomenological and the cortical. It regards attempts to reduce the two former to the last as involving a logical confusion: because for every performance some robot could be programmed to perform it, it does not follow that there could be some robot programmed to perform any and every performance. Remote intentionality and indefinitely variable universality of response or approach indicate a use of the cortex that always goes beyond it. This use may be limited by its instrument, and the thought of separated substances may be less fragmentedly cerebral.

FINDLAY, John N. The Diremptive Tendencies Of Western Philosophy. *Phil East West* 14,167-178 JI 64.

The article stresses the extent to which fragmenters rather than unifiers have abounded in the West. Even Hegel hates abstract, undifferentiated unity, and the thought of Wittgenstein makes everything independent and piecemeal. The author, if he has to be "ultimate," favours a flight from fragmentation, not to unitive absorption, but to a mystical interpenetration in which differences will be retained.

FINE, Arthur I. Explaining The Behavior Of Entities. *Phil Rev* 75,496-509 O 66.

Fine attacks the thesis that any scientific theory explains the behavior of the entities coming under that theory on the basis of a distinction between natural behavior, which does not require explanation, and deviant behavior, which does require explanation. He finds the thesis logically not required, historically inaccurate, and methodologically dangerous.

FINE, Arthur. Physical Geometry And Physical Laws. *Phil Sci* 31,156-162 Ap 64.

FINE, N J and Harrop, R. Uniformization Of Linear Arrays. *J Sym Log* 22,130-140 Je 57.

FINE, N J. Proof Of A Conjecture Of Goodman. *J Sym Log* 19,41-44 Mr 54.

FINGARETTE, Herbert. *Confucius: The Secular As Sacred*. NY Harper & Row 1972.

The book includes a new series of interpretations of key ideas in Confucius' analects.

FINGARETTE, Herbert. *On Responsibility*. NY Basic Books 1967.

There are two essential dimensions of responsibility. The first is that of acceptance, commitment, care, and concern, and of the attendant elements of choice and the creativity in choice. We fully understand acceptance of responsibility only if we also understand its necessary expression in responsible care. And we understand responsible care not as whim, taste, liking, affection, but as an aspect of the acceptance of responsibility. 'Acceptance', 'care', and 'responsibility' are part of a family of terms which form a quasi-autonomous "language"; it is in the context of this language and its use that the terms take on the distinctive significance in question. The other dimension is that of the "forms of life," initially socially realized, which

constitute the form and content of responsibility. The emphasis is on the power of ceremony. The ceremonial act is the primary, irreducible event; language cannot be understood in isolation from the conventional practice in which it is rooted; conventional practice cannot be understood in isolation from the language which defines and is part of it.

FINGARETTE, Herbert. *The Meaning Of Criminal Insanity.* Berkeley Univ Of Calif Pr 1972.

This book is a fundamental study of the concept of criminal insanity, its meaning, its justification, its legal and psychological significance. History and current concepts are discussed critically, and a new, valid concept is explained and justified.

FINGARETTE, Herbert. *The Self In Transformation: Psychoanalysis, Philosophy, And The Life Of The Spirit.* NY Basic Books 1963.

This is a study of the inner psychic and spiritual process of maturation of the individual and the movement toward spiritual liberation. Within a basic psychoanalytic framework, the process of self-transformation is outlined through crucial stages, and is systematically related to themes and texts in Western Philosophy, and in Existential Theology, as well as in Asian Taoism and Buddhism.

FINGARETTE, Herbert. "Unconscious Behavior" And Allied Concepts: A New Approach To Their Empirical Interpretation. *J Phil* 47,509-519 Ag 50.

A new approach to the interpretation of some of the fundamental concepts involved in the theory of dynamic psychologies is examined. The author presents and examines the following ideas: (1) "Empirical" or "Operational" interpretations of psychoanalytic concepts have been misinterpretations. (2) Psychoanalytic usage is continuous with sensible English. (3) Psychoanalytic usage can be interpreted literally. (4) Psychoanalytic usage is in principle compatible with an operationalist and/or empirically oriented introspectionist approach to psychology.

FINGARETTE, Herbert. Addiction And Criminal Responsibility. *Yale Law Journal* 84,413-444 1975.

This book is a systematic study of current US legal doctrine on addiction as it affects criminal responsibility, and of the current medical-scientific state of knowledge in this area. The legal analysis shows that all current legal reasoning designed to hold addicts non-responsible assumes, at bottom, that addictive conduct is not voluntary. The scientific evidence at present does not support such an assumption in law, and in fact suggests the contrary to be a preferable assumption.

FINGARETTE, Herbert. Diminished Mental Capacity As A Criminal Law Defence. *Modern Law Review* 37,264-280 My 74.

This article deals with a unified theory of defence, for English criminal law, where mental disability of any origin or duration affects criminal responsibility.

FINGARETTE, Herbert. Disabilities Of Mind And Criminal Responsibility—A Unitary Doctrine. *Columbia Law Review* 76,236-266 1976.

This article represents a unified doctrine to cover all forms of mental disability, chronic or temporary, of whatever origin, that can affect criminal responsibility. The discussion is in the context of US Criminal Law.

FINGARETTE, Herbert. Eros And Utopia. *Rev Metaph* 10,660-665 Je 57.

FINGARETTE, Herbert. Freud And The Standard World. *Rev Metaph* 10,258-272 D 56.

FINGARETTE, Herbert. How Normativeness Can Be Cognitive But Not Descriptive In Dewey's Theory Of Valuation. *J Phil* 48,625-635 O 51.

A critique of the criticisms presented by Charles Stevenson, and Cavell and Sesonke on Dewey's theory of valuation is given by the author. He states that critics hold the following mistaken view; when Dewey speaks of the strictly cognitive content of evaluation he means to imply that the content is strictly descriptive. The correct view is expressed as being contingent upon understanding that evaluations are not descriptive in content; they are regulative, normative.

FINGARETTE, Herbert. Human Community As Holy Rite: An Interpretation Of Confucius' Analects. *Harvard Theological Review* 59,53-67 1966.

This article is a new interpretation of the significance of Confucius' concept of Rite. It is shown to bring out a distinctive feature of what it is to be fully human; and holiness is then seen in man and community rather than as transcendent.

FINGARETTE, Herbert. Psychoanalytic Perspectives On Moral Guilt And Responsibility: A Re-evaluation. *Phil Phenomenol Res* 16,18-36 S 55.

FINGARETTE, Herbert. Real Guilt And Neurotic Guilt. *J Existent* 3,145-158 Fall 62.

FINGARETTE, Herbert. The Perils Of Powell: In Search Of A Factual Foundation For The "Disease Concept Of Alcoholism". *Harvard Law Review* 83,793-812 1970.

This article is an analysis of the current legal reasoning and law as to the criminal responsibility of alcoholics, and an analysis of the medical and factual background. The legal arguments to absolve the alcoholic of responsibility for criminal acts while drunk are shown to rest on unsatisfactory argument and fundamentally false factual assumptions.

FINLEY JR, John H. *Four Stages Of Greek Thought.* Stanford CA Stanford Univ Pr 1966.

In the four chapters of the book the author outlines what he has found to be the major features of the development of Greek thought from the age of myth to the times of philosophy and conceptual thinking. They are the "heroic mind" with Homer as its main representative, the "visionary mind" expressed by Aeschylus, Sophocles, and in certain ways Pindar, the "theoretical mind" whose spokesmen are Euripides and Thucydides, and finally the "rational mind" embodied primarily in the writings of the philosophers Plato and Aristotle. The treatment of the story of Greek genius is presented not as one of steady progression but of distinct phases of equally significant modes of expression.

FINNEY, Gretchen L. Ecstasy And Music In Seventeenth-Century England. *J Hist Ideas* 8,153-186 Ap 47.

FINOCCHIARO, Maurice A. *History Of Science As Explanation.* Detroit 1973.

This is a contribution to the philosophy of the history of science, which studies (1) the aims, methods, presuppositions, and epistemological structure of the historiography of science, and (2) the legitimacy of a philosophy of scientific evolution and the interrelationship among the latter, the history of science, and the philosophy of science. The book discusses the views of such scholars as Hempel, Scriven, Croce, Kuhn, Agassi, Koyré, Guerlac, Popper, and Feyerabend. Specific topics included are whether (1) the historical explanation of scientific discoveries is vacuously potentially predictive, (2) philosophy-of-science principles are the covering laws of history-of-science explanations, (3) Croce's philosophy of history can be usefully applied to the historiography of science, (4) Scriven's concept of explanation as understanding throws any light on history-of-science explanation, and (5) the gap between external and internal factors can be bridged.

FINOCCHIARO, Maurice A. Newton's Third Rule Of Philosophizing: A Role For Logic In Historiography. *Isis* 65,66-73 1974.

In an attempt to gain and provide a critical understanding of Newton's Third Rule of Philosophizing, a number of problems are formulated concerning its intellectual content. In solving these problems, an ambiguity is shown to exist in Newton's explanatory remarks which requires distinguishing two different rules. Since the English statement of the rule contains no ambiguity, the adequacy of the translation is questioned; an examination of the original Latin reveals that Newton's language does indeed contain an ambiguity sufficiently subtle to make comprehensible the ensuing equivocation in his explanatory remarks. The investigation illustrates and justifies the usefulness of logical analysis in historiography of science.

FIGORE, Robert L. *Drama And Ethos: Natural-Law Ethics In Spanish Golden Age Theater.* Lexington 1975.

This study is an attempt to show that knowledge of natural-law ethics, is essential to the understanding of the dramatic works of the Golden Age in seventeenth century Spain. Of the five dramatic works examined by Fiore, the three by Calderon represent the *auto sacramental*, or dramatic decadent of the medieval morality plays, that were presented in conjunction with elaborate *Corpus Christi* processions honoring the Eucharist.

FIREBAUGH, Joseph J. The Relativism Of Henry James. *J Aes Art Crit* 12,237-242 D 53.

FIREMAN, Peter. *Justice In Plato's Republic.* NY Philosophical Lib 1957.

FIREMAN, Peter. *Perceptualistic Theory Of Knowledge.* NY Philosophical Lib 1954.

This sketch of a theory of knowledge is developed around the concepts of perception, thinking, and experience. The author is concerned to attack as inadequate to the facts the sense datum theory, Russell's logical theories, and recent interpretations of such scientific concepts such as "cause," "conservation of mass," and "conservation of energy."

FIRTH, Roderick. Austin And The Argument From Illusion. *Phil Rev* 73,372-382 Jl 64.

Firth argues that Austin's criticisms of the argument from illusion do not destroy the argument. We can reformulate it in two ways so that it succeeds as a method of ostensibly defining terms denoting the sensory constituent of perceptual experience. One way maintains the act-object distinction of the Cartesian tradition and the other uses the language of "looks."

FIRTH, Roderick. Chisholm And The Ethics Of Belief. *Phil Rev* 68,493-506 O 59.

- FIRTH, Roderick.** Coherence, Certainty, And Epistemic Priority. *J Phil* 61,545-556 O 64.
- Lewis believed that his own theory of knowledge, in its broad outlines, represents the only alternative to a coherence theory of justification. The issue can be defined by construing the two alternatives as answers to the question: What properties of statements are warrant-increasing properties? According to the coherence theory all such properties are "ultimately inferential." Lewis's doctrine of certainty can be interpreted in various ways, but in any case he maintains that there is one warrant-increasing property that is not ultimately inferential and thus accepts the "thesis of epistemic priority." This purely logical objection can be met by distinguishing two classes of inferentially-warranted statements: a class of "basic" warrant-conferring statements and a class of statements that are "derivatively warranted"; and the issue between Lewis and the coherence theory can only be settled, therefore, by methods that are ultimately empirical.

- FISH, Alphoretta** and Goldmark, Bernice. Inquiry Method: Three Interpretations. *Science Teacher* 33 F 66.
- This article is a philosophic analysis of three methods of inquiry in Science Education. The methods are compared according to their directing questions and their means-methods-ends. Two theories are designed for the expansion and reconstruction of theories and methods in the subject matter (Suchman) and in teaching and learning (Strasser). The third (Fish) is designed for the expansion and reconstruction not only of substantive theories and methods but also of the methods of making judgments about theories and methods.
- FISHBURN, Peter C.** *Decision And Value Theory*. NY Wiley 1964.
- The author says, "this book is not primarily a book about ethics... we are concerned with the efficient pursuit of objectives and with methods of analysis which might be useful in doing this." His concern takes the form of presenting methods of value measurement and of constructing a mathematical model for decision making. Ordinal, metric, and bounded interval measures are presented, and an expected-value decision model is constructed. Problems of probability and of independence of variables are discussed with reference to the model. Indices are included with the book.

- FISHER, John.** Plato On Writing And Doing Philosophy. *J Hist Ideas* 27,163-172 Ap-Je 66.
- The author believes that Plato's view of the nature of philosophical activity can be seen in Plato's paradoxical attitude toward the relationship between the written and spoken word. The *Phaedrus* is examined from this perspective, and the author concludes that the varied wing symbols used by Plato here indicate that although written words "have no wings," the words of philosophy do. Written words have some effectiveness for persuasion, but a philosopher needs more spirited interaction than this; only the spoken word can supply this.

- FISHER, Mark.** Category-Absurdities. *Phil Phenomenol Res* 24,260-267 D 63.
- It is maintained that to show a statement to be absurd, one shows that it can't be true, that it is necessarily false, for a particular kind of reason. Sometimes category-absurdities arise because linguistic rules are broken. The author holds that one can solve the problem of what makes category-mistakes mistakes without mentioning meaning at all. Then one can go on to discuss the different kind of error that arises when meaning rules are ignored.

- FISHER, Mitchell Salem.** *Robert Boyle, Devout Naturalist: A Study In Science And Religion In The Seventeenth Century*. Philadelphia Oshiver Studio Pr 1945.
- Boyle's youthful dream was the pious aspiration that in the physico-chemical laboratory he could find the evidences for the natural reasonableness of Christianity. Mr Fisher's historical study explains why Boyle, who did so much to advance experimental science and method, balked at the extension of that method to "higher" things. Boyle's belief in the immutability and simplicity of the ultimate elements and laws of nature runs over into his rational theology. Mr Fisher's solid study of the mind of Robert Boyle throws a great deal of light on the multiplicity of socio-historical and methodological considerations that enter into the perennial problem of adjusting established beliefs with the results and methods of experimental inquiry.

- FISK, M.** *A Modern Formal Logic*. Englewood Cliffs NJ Prentice-Hall 1964.
- This book is one of five short texts in the publisher's "Foundations of Logic Series." Fisk presents a sentential calculus and extensions to uniform and full first-order quantification in terms of natural-deduction principles. The principles laid down are continually justified by reference to our instinctive use of language.
- FISK, Milton.** *Nature And Necessity: An Essay In Physical Ontology*. Bloomington Indiana Univ Pr 1973.
- FISK, Milton.** A Paradox In Frege's Semantics. *Phil Stud* 14,56-62 1963.
- In his "On Concept and Language" Frege holds "The concept horse is not a concept." He argues that expressions like "the concept F" are proper names and have as their reference a definite object, but not a concept. Fisk argues that the principles which constrain Frege to deny that the concept horse is a concept lead to a contradiction. He concludes that this contradiction indicates the impossibility of drawing a distinction between the reference of a proper name and that of a predicate in terms of Frege's object-concept duality.
- FISK, Milton.** Analyticity And Conceptual Revision. *J Phil* 63,627-636 O 66.
- What rules are such that propositions can be true in virtue of them? Not grammatical rules, not rules of polite speech, and not liturgical rules of use. Rules which generate truth are distinguished by their purpose, which is to limit the sources of disconfirmation of all propositions through the sanction of linguistic impropriety. Such rules can be said to generate truth since by claiming that a proposition violating them is true one places oneself in opposition to the purpose of the rule. This would not be the case if the rules were of a different kind.
- FISK, Milton.** Causation And Action. *Rev Metaph* 19,235-247 D 65.
- There is a tradition according to which causation cannot be understood apart from a notion of causal action irreducible to that of necessary sequence. The author's purpose is not to refute the sequentist position but to elaborate the causal action view. After comparing the two positions, he introduces the concept of "bare identicals" which can support incompatible properties in different contexts, and he examines the complex temporal structure of causation. Finally, the author argues that

to study one kind of causation, such as causal action, can indeed contribute to an understanding of the nature of causation in general.

FITCH, F B. *A System Of Combinatory Logic: Technical Report Number 9.* New Haven Yale Univ Pr 1960.

After a brief introductory section explaining functional notation and the class of Q-functions, rules for the introduction and elimination of negation, conjunction, and the other Boolean operators are presented, followed by rules governing the identity, including the Zeta rule of cancellation. The standard combinatory operators are introduced in Chapter 3. Chapter 4 takes up the natural numbers, some laws being shown to hold for all Q-functions, others only for the integers. Some of the rules involve infinite sets of premisses. Next universal and existential quantifiers are introduced, and finally relations corresponding to *less than*.

FITCH, Frederic B. Natural Deduction Rules For Obligation. *Amer Phil Quart* 3,27-38 Ja 66.

Utilizing the close analogy between the concept of necessity in alethic modal logic and the concept of obligation in deontic modal logic, natural deduction rules for obligation are formulated so as to be very much like the rules for necessity in the author's book *Symbolic Logic*. The general technique of natural deduction in propositional calculus and in alethic modal logic is presented in summary form, and then this technique is extended to deontic logic. The concept of "subordinate proof" is generalized to that of "subordinate column" in such a way that columns are allowed to serve as hypotheses of other columns. Special rules of column-introduction and column-elimination are presented. The main systems of alethic modal logic are briefly described, and the corresponding deontic correlates of these systems are described and discussed. A doctrine of "deontic incorrigibility" is proposed, according to which, in the case of successive applications of two or more deontic operators to a proposition, the applications beyond the first are viewed as vacuous.

While agreeing with Quine that existence is not an attribute and that the realm of non-existent possible entities must be rejected as a confusion and a delusion, the author takes issue with Quine's dictum that to be is to be a value of a variable. The problem with Quine's view is that it cannot be used to make sense of statements that deny existence. The author first proposes that the concept of existence applies

properly to attributes, so that any statement to the effect that an individual of such-and-such a kind exists is to be understood as a statement to the effect that such-and-such a kind is a kind which is non-empty. He later revises this view, using the notions of existential and unitation, to avoid contradiction by way of Russell's paradox.

FITCH, Frederic B. Universal Metalanguages For Philosophy. *Rev Metaph* 17,396-402 Mr 64.

Tarski's conclusion that the concept of truth relative to a formal language cannot be defined in that language itself has contributed to a general pessimism regarding attempts to formalize philosophical concepts. The author demonstrates that by liberalizing Tarski's restrictive criterion for truth provision can be made for languages lacking excluded middle which can possess a definition of their own truth. Thus, he argues, the groundwork is laid for an ultimate formal system which can adequately deal with its own concept of truth and within which other philosophical concepts can also presumably be formalized.

FITCH, Frederick B. The Perfection Of Perfection. *Monist* 47,466-471 Spr 63.

Hartshorne argues that if it is possible that something is perfect, then it is necessary that something is perfect. Fitch argues here that if it is possible that something is perfect, then the attribute perfection itself is perfect.

FLATHMAN, Richard E. *The Public Interest: An Essay Concerning The Normative Discourse Of Politics.* NY Wiley 1966.

The author states that he has drawn upon the Oxford school of ordinary language philosophy for his orientation, his theoretical constructs, and a theory of value. His objective is to arrive at conclusions in ethics or metaethics (as Hare distinguishes this area from those of moral questions and of descriptive ethics). He proceeds by examining the actual usages of the term "public interest" and the relevance of those usages to politics in Part One, and philosophic questions of the relations of morals to politics in Part Two. Part Three is a brief summary bringing together the results of the first two parts. He concludes: "Insofar as we have focused upon 'public interest', our concern has been the logical possibility of a reasoned exercise of state power and reasoned evaluation of the uses to which that power is put. If the foregoing arguments are tenable, there are specifiable and defensible procedures and criteria that can be employed for these purposes."

FLATHMAN, Richard Earl. *Political Obligation*. NY Atheneum 1972.

The present work is volume II of the author's Gifford Lectures. MacMurray sustains and enriches the point of view that he presented in *The Self as Agent*, developing at length the implications of his insistence that the self must be understood primarily as an agent. The apprehension of the Other, the modes of morality, the nature of society and community, and the role of religion are examined.

FLATHMAN, Richard E. Forms And Limits Of Utilitarianism. *Ethics* 76,309-317 JI 66.

This critical review of David Lyons' *Forms and Limits of Utilitarianism* rejects Lyons' claim to have shown that there is no reason to prefer either rule- or act-utilitarianism one to the other. Lyons' own evidence, the author holds, shows act-utilitarianism theoretically and practically superior. In addition, he argues, Lyons does not make a convincing case that utilitarianism is inadequate. Lyons' claims that considerations of motive are necessary to arrive at criteria of fairness and that utilitarianism must ignore motivation fail because the moral standing of motives cannot be understood without recourse to utilitarianism.

FLEISHER, Martin. Trust And Deceit In Machiavelli's Comedies. *J Hist Ideas* 27,365-380 JI-S 66.

Machiavelli, according to this article, does not esteem the classical virtue of steadfastness in the face of changing fortune, but believes that people must alter their attitudes as their lives change. The author believes that Machiavelli's writings on the nature of private, family life are often thought to reveal a dichotomy between public and private morality. Machiavelli's plays, all comedies, are analyzed to see their messages about public and private morality. The conclusion reached is that these plays fail to disclose a principle for separating public and private morality, though such a distinction is acknowledged in them. Trust is found to be prudent only when constancy in circumstances is present; it cannot provide an adequate basis for all public or private actions.

FLEMING, Brice Noel. On Avowals. *Phil Rev* 64,614-625 O 55.

FLEMING, Brice Noel. On Intention. *Phil Rev* 73,301-320 JI 64.

Fleming discusses some shortcomings of Anscombe's treatment of statements of intentions, analyzes knowing and doing in relation to intentions, and offers his own analysis of doing something intentionally: "To do x intentionally is to do x knowing you are doing it, wanting to do it, and doing it because you want to do it."

FLEMING, Brice Noel. The Nature Of Perception. *Rev Metaph* 16,259-295 D 62.

FLEMING, John J. Sub-Quantum Entities. *Phil Sci* 31,271-274 JI 64.

FLEMING, Noel and Wolterstorff, Nicholas. On 'There Is'. *Phil Stud* 11,41-48 1960.

The authors attempt to show that 'there is' and 'exists' are not univocal terms, and that 'there is' does not always mean the same as 'exists'. They give examples of three different uses of 'there is': (1) one in which it is synonymous with 'exists', (2) one in which it is not the same as 'exists', (3) one which is ambiguous. Evidence that they are not the same can be found, according to the authors, in the fact that it is true that there are things that don't exist, such as unicorns.

FLETCHER, F T H. *Pascal And The Mystical Tradition*. NY Philosophical Lib 1954.

FLETCHER, Joseph F. *Situation Ethics: The New Morality*. Philadelphia Westminster 1966.

FLETCHER, Joseph Francis. *Moral Responsibility; Situation Ethics At Work*. Philadelphia Westminster 1967.

This is a collection of papers, all by Fletcher, presenting "situation ethics at work." Some have appeared between 1959 and 1966, but not always in easily available publications. The collection provides a survey of Fletcher's situation ethics as it deals with several prominent contemporary problems which have been the focus of considerable debate among theological ethicists. Included here are sexual relations, birth control, medical ethics, and business ethics. Those of Fletcher's papers which have been the subject of extensive discussion in recent theological ethics are included in the volume.

FLETCHER, Joseph Francis. *Morals And Medicine: The Patient's Right To Know The Truth, Contraception, Artificial Insemination, Sterilization, Euthanasia*. Boston Beacon Pr 1960.

FLEW, A G N. *Evolutionary Ethics*. NY St Martin's Pr 1967.

The author while accepting the naturalist background in general suggested by the theory of evolution, and while not, like Moore, accepting "nonnaturalist" properties, contends that attempts to derive the fundamental ethical criteria from

factual evolutionary development involve a form of what Moore called the naturalist fallacy and are really fallacious. A bibliography is appended.

FLEW, Antony G N. *Hume's Philosophy Of Belief: A Study Of His First Inquiry*. NY Humanities Pr 1961.

This is a detailed commentary on Hume's first *Inquiry*. Flew argues, rightly, that it should not be treated simply as a weakened abridgement of part of the *Treatise*. He gives a great deal of the historical context in an interesting and helpful way, but he is primarily concerned to lay out and to assess Hume's arguments. Inevitably much of the book covers quite familiar ground, but in discussing Hume's arguments on miracles and on religion generally, Flew has a number of new and suggestive points to make.

FLEW, Antony. 'The Soul' Of Mr A M Quinton. *J Phil* 60,337-343 Je 63.

A M Quinton (*Journal of Philosophy*, Volume 59, 1962) explores the possibility of constructing an empirical concept of the soul along Lockean lines (a series of mental states distinct from the body). The main object in this note is to show that Quinton is no more successful than Locke in developing a mental criterion of identity. The primary objection is that since Quinton's criterion relies upon memory in a way that presupposes personal identity, it is out of the question to analyze the latter in terms of the former. The note also corrects some misrepresentations of Plato, one of which leads to a distorted view of Descartes.

FLEW, Antony. Did Hume Ever Read Berkeley? *J Phil* 58,50-51 Ja 61.

FLEW, Antony. Tolstoi And The Meaning Of Life. *Ethics* 73,110-118 Ja 63.

Tolstoi's *The Confession* is used here as the object of a case study in order to examine the meaning of the question: "What is the meaning of life?" Although Tolstoi writes of the change from a sense of the meaningfulness of life in the face of suffering and death to a sense of meaningfulness as though some knowledge, e.g., of something mystical, were responsible, in fact the original state and its cure are not dependent on knowledge of truths and thus not on knowledge of mystical truths. Facts of suffering and death do not entail conclusions about the pointlessness of life.

- In the main, this is a careful study of the origin, nature, and function of the assets and liabilities of the super-ego. In this connection it is interesting that he attempts to bring together for his own purposes such diverse points of view as those of Freud, McDougall, Baldwin, and many later writers. On the whole, however, his method of analyzing moral problems is to show how various forms of aggression, sadomasochism, taboo, the need for punishment, vicarious suffering, etc., result from harsh, constrictive, and rigid aspects of the super-ego. Adequate adjustment, on the other hand, requires a proper balance between super-ego restrictions and id capacities. In many respects this is a valuable restatement of the interaction of super-ego and id.

- FODOR, J A and Chihara, C S.** Operationalism And Ordinary Language: A Critique Of Wittgenstein. *Amer Phil Quart* 2,281–295 O 65.
- This paper explores some lines of argument in Wittgenstein's post *Tractatus* writings in order to indicate the relations between Wittgenstein's philosophical psychology, on the one hand, and his philosophy of language, his epistemology, and his doctrines about the nature of philosophical analysis on the other. The authors maintain that the later writings of Wittgenstein express a coherent doctrine in which an operationalistic analysis of confirmation and language supports a philosophical psychology of a type the authors call "logical behaviorism." They also maintain that there are good grounds for rejecting the philosophical theory implicit in Wittgenstein's later works. In particular, they first argue that Wittgenstein's position leads to some implausible conclusions concerning the nature of language and psychology; second, they maintain that the arguments Wittgenstein provides are inconclusive; and third, they sketch an alternative position which they believe avoids many of the difficulties implicit in Wittgenstein's philosophy.
- FODOR, J A.** Could There Be A Theory Of Perception? *J Phil* 63,369–380 Je 66.
- Fodor reviews some central arguments for the claim that the traditional goals of psychological investigation are conceptually incoherent. He does so with special reference to Gilbert Ryle's discussion of perception. He concludes that the results of philosophical discussions of psychology which attempt to show that the whole enterprise (and not just some theory or other) is radically unsound have been sufficiently unsatisfactory to suggest that some more modest approach be considered.
- FODOR, Jerry A.** *Psychological Explanation: An Introduction To The Philosophy Of Psychology*. NY Random House 1968.
- FODOR, Jerry A.** "What Do You Mean"? *J Phil* 57,499–506 Jl 60.
- According to the replacement theory of meaning, every speech act is consequent upon an internal, mental act of meaning or intending. The question "What do you mean by the sentence" is thus always a reasonable question and is always distinguishable from the question "What does the sentence mean?" The author argues that the replacement theory is misleading in its implications as to the function of such questions as "What do you mean" and that if what it implies about them

were true, it would follow that it must be appropriate to ask strictly unanswerable questions.

FODOR, Jerry A and Katz, Jerrold J. The Availability Of What We Say. *Phil Rev* 72,57-71 Ja 63.

Fodor and Katz criticize Cavell's position on the relation between ordinary language philosophy and empirical investigations of ordinary language, in "Must We Mean What We Say?" *Inquiry*, Volume 1, Pages 172-212, and "The Availability of Wittgenstein's Later Philosophy," *Philosophical Review*, Volume 71, Pages 67-93. Cavell holds that disagreements between ordinary language philosophers over grammar and semantics are in no sense empirical. Fodor and Katz show that ordinary language philosophers are engaged in empirical investigation.

FODOR, Jerry A. On Knowing What We Would Say. *Phil Rev* 73,198-212 Ap 64.

In trying to distinguish between the defining characteristics of X's and those features which X's are found to have with complete empirical reliability, philosophers often ask what we would say if something seemed to be an X only it lacked a certain feature F. Fodor argues that there is no reason to suppose that in such cases these questions are answerable on the basis of our knowledge of our language; because they are tantamount to asking what beliefs we would adopt should our current beliefs prove false, and this question is not answerable on the basis of our current linguistic intuitions.

FOLEY, Vernard. *The Social Physics Of Adam Smith.* West Lafayette IN Purdue Univ Pr 1976.

The argument of this book is that Adam Smith held a comprehensive theory of nature and society which he derived in large measure from the ancient Greeks. The author contends that Smith's economic theory might be significantly reinterpreted in light of his "social physics," although the author leaves that reinterpretation to other scholars.

FONTAINE, Raymond G. *Subsistent Accident In The Philosophy Of Saint Thomas And His Predecessors.* Washington DC 1950.

The author sketches the history of subsistent accident prior to St Thomas, then sets the metaphysical background for the problem, discusses the relation between substance and accident, and then devotes a major effort on the principal problem concerning the accident's subsistence without substance and the character of St Thomas' teaching on subsistent accident. He seeks to provide an answer to "whether his doctrine can explain the being's unity and, at the same time, the Eucharistic appearances, or whether his system collapses before one or the other; and, finally, whether or not we must look for a more satisfactory answer to these problems in the Suarezian or Dynamistic philosophies."

FORD, Gervais W (ed) and Pugno, Lawrence (ed). *The Structure Of Knowledge And The Curriculum.* Chicago Rand McNally 1964.

FORD, John C and Kelley, Gerald. *Contemporary Moral Theology.* Westminster MD Newman Pr 1958.

FORD, John C and Kelly, Gerald. *Contemporary Moral Theology, Volume I: Questions In Fundamental Moral Theology.* Westminster MD Newman Pr 1958.

This is the first in a projected series of works on moral theology. The authors have selected for it those questions that are fundamental in moral theology. These are discussed partly in terms of surveys of contemporary thought and partly in terms of the authors' own judgments. The authors take account of the "new approaches to moral theology," especially as they are related to "situations ethics" and "subjective imputability." On the theoretical side they include the problems of unconscious motivation and freedom; on the practical side, criminal responsibility, alcoholism, and the relation of psychiatric diagnosis to moral theology.

FORD, Lewis (ed). *Two Process Philosophers: Hartshorne's Encounter With Whitehead.* Tallahassee FL Amer Acad Of Relig 1973.

Five essays contrasting Hartshorne's philosophy with Whitehead's to which Hartshorne has appended a summary listing of the ideas and theses of process philosophers. William Lad Sessions explores the philosophy of Hartshorne's 1923 dissertation, before it was significantly influenced by Whitehead, to show the ways in which Hartshorne is not Whitehead's disciple. David Griffin catalogues seven differences he finds in the Hartshornean corpus that Hartshorne explicitly recognizes between his philosophy and Whitehead's. Lewis S Ford comments on these differences from the perspective of Whitehead, and proposes four additional differences. William M O'Meara defends Hartshorne's conception of metaphysics as the study of non-restrictive, existential affirmations, seeing it to be a valid extension and clarification of Whitehead's methodology. Frederic F Fast explores Hartshorne's initial disagreement, and subsequent agreement with Whitehead concerning the causal independence of contemporaries, and shows the unresolved or partially resolved tensions this subsequent agreement has generated for Hartshorne.

FORD, Lewis S. Divine Persuasion And The Triumph Of Good. *Christian Scholar* 50,235-250 Fall 67.

In part this essay responds to the critique made by Edward H Madden and Peter H Hare in *Evil and the Concept of God* that while classical omnipotence makes God responsible for the evil in the world, Whitehead makes God too weak to guarantee the ultimate triumph of good or even growth of value. I argue there is no philosophical guarantee of the ultimate triumph of good, in order to make room for faith. Nevertheless there is a final redemption from evil which takes place in God's receptive experience to which we contribute, if not in this temporal world.

FORD, Lewis S. God And The Ontic Order. *Phil Forum (Pacific)* 5,69-79 S 66.

FORD, Lewis S. Is Process Theism Compatible With Relativity Theory? *Journal Of Religion* 48,124-135 Ap 68.

Hartshorne's conception of God as a temporal series of occasions experiencing all space in a single moment appears to specify a privileged meaning to simultaneity contravening Einstein's special theory of relativity. Whitehead's notion of a single everlasting becoming for God, in contrast, allows God to experience each finite occasion in terms of its own spatiotemporal standpoint, and is thus free from this difficulty.

FORD, Lewis S. Process Trinitarianism. *J Amer Acad Relig* 43,199-213 Je 75.

Classical theism has used the doctrine of the Trinity to express God's simultaneous transcendence of, and immanence within, the world, but here a twofold distinction, such as that proposed by Richardson or Hartshorne, will do: God as Absolute and God as Related. Whitehead has seen a double problem, for the world also transcends, and is immanent within, the world. For this double problem a threefold distinction is necessary: the primordial envisagement, that divine instantiation of creativity which utterly transcends the world, the primordial nature or Logos, part of which is individually immanent within each creature as its initial aim, and the consequent nature, which is the way each creature, transcendent to God in its becoming, is ultimately included within the ongoing temporal experience of God.

FORD, Lewis S. The Appropriation Of Dynamics And Form For Tillich's God. *Harvard Theological Review* 68,35-51 1975.

In the official formulation of Tillich's theology, the ontological polarity of dynamics and form, together with the other polarities, provides the basic symbolic material for the description of the divine life. In that life dynamics and form are to be perfectly balanced, with the tensions and disruptions characteristic of finite life wholly overcome. Although he does not identify dynamics with the power of being, their common character makes this non-identification problematic. I contend that the internal logic of Tillich's position demands this identification. This, in turn, entails that God is an instance of the power of being pervasively inherent in all beings, and thus a being rather than, as Tillich claims, being-itself beyond all beings.

FORD, Lewis S. The Controversy Between Schelling And Jacobi. *J Hist Phil* 3,75-90 Ap 65.

In this re-examination of the sources Arthur O Lovejoy drew upon in reconstructing this controversy in the final chapter of *The Great Chain Of Being*, I argue that Jacobi's book was not intended as an attack on Schelling, still less as a criticism of his emerging theory of evolutionary theism; that Schelling's violent response simply reflected a position he had already been developing privately prior to the imagined provocation from Jacobi, and that Schelling never espoused a purely evolutionary doctrine with respect to God. These three theses contravene Lovejoy's position and his estimate of the importance of this controversy in Schelling's development.

FORD, Lewis S. The Eternity Of God And The Temporality Of The World. *Encounter* 36,115-122 Spr 75.

Hugo Meynell, in "The Theology of Hartshorne," criticizes Hartshorne's thoroughly temporalistic understanding of God's knowing and willing. I show that Meynell's objections, based upon classical theism's proper concern for the unalterability of divine will can be met by Whitehead's integration of divine temporal experience within the nontemporality of God's primordial envisagement.

FORD, Lewis S. The Three Strands Of Tillich's Theory Of Religious Symbols. *Journal Of Religion* 46,104-130 Ja 66.

By concentrating upon Paul Tillich's actual usage, rather than his explicit theorizing, three kinds of symbolic predication are discerned: (1) the most important, whereby a particular concept such as life or freedom is affirmed of God, yet simultaneously negated insofar as this concept refers to a being (in contrast to God who is not a being but being-itself); (2) the way in which a symbolic medium is transparent (better, translucent) to its source; and (3) the way in which a symbol participates in the reality symbolized. Tillich responds to this analysis in the same issue.

FORD, Lewis S. Tillich And Thomas: The Analogy Of Being. *Journal Of Religion* 46,229-245 Ap 66.

Tillich introduces religious symbolism for the same reason that Thomas Aquinas uses analogies: to speak meaningfully and adequately about God in terms drawn from our experience of the finite world. Yet there are four significant contrasts in their use of the analogy of being: (1) Thomas uses it as the basis for a natural theology, while Tillich rejects the possibility of any natural theology; (2) Thomistic analogy is rooted in the analogous nature of being, but Tillich's theory of symbols is not; (3) Thomistic metaphysics depends upon the analogy of being, while Tillich's ontology of finite being is quite independent; (4) Thomistic analogy provides a continuity between finite and infinite being which Tillich cannot accept. Thomas' act of being can be compared with Tillich's power of being, but the success of any non-univocal predication of attributes depends upon a minimum of continuity between God and finite beings which Thomas' theory may be able to supply, but Tillich's cannot.

FORD, Lewis S. Tillich's One Non-Symbolic Statement: A Propos Of A Recent Study By William Rowe. *J Amer Acad Relig* 38,176-182 Je 70.

In *Religious Symbols and God*, William L Rowe analyzes Tillich's concept of God as that which ultimately concerns us in three chapters, followed by four which probe his account of religious symbols. But these two studies are not integrated by the claim that Tillich's insistence that God is not a being necessitates that all language, which is indelibly about beings, must be symbolic when applied to God. Perhaps he thinks Tillich changed his mind in the preface to volume two of the *Systematic Theology*, but the one non-symbolic statement which requires all other statements about God to be symbolic (volume two) is simply the earlier claim that "God is being-itself" (and hence not a being).

FORD, Lewis S. Whitehead's Appropriation Of The Teachings Of The Buddha. *Religion In Life* 45,184-190 Sum 76.

Whitehead's scattered statements about Buddhism are collected and discussed, and the final chapter of *Adventures of Ideas* on "Peace" is interpreted in terms of the Buddhist experience of satori.

FORELL, George W. *Ethics Of Decision: An Introduction To Christian Ethics*. Philadelphia Muhlenberg Pr 1955.

The author offers a Christian ethics in which man's acceptance of and obedience to God are considered the cornerstones of morality, decision being forced upon him by the human situation and moral laws being "a part of the structure of the world." Right is pictured as obedience to divine commands; yet such obedience is impossible, since man in his sinfulness must rebel. The divine moral laws serve to point up man's imperfection and to keep some modicum of order in the world "until history has reached its end." The author suggests an ethics for today based upon nine of the ten commandments.

FORTIN, Ernest L. *Political Idealism And Christianity In The Thought Of St Augustine*. Villanova PA Villanova Univ 1972.

FOSS, Martin. *Death, Sacrifice, And Tragedy*. Lincoln 1966.

In opposition to Heidegger's insistence on Being-Towards-Death, Foss argues that "it is life in its widened form of communion, not death, toward which man lives."

FOSS, Martin. *Logic And Existence*. NY Philosophical Lib 1962.

This essay develops the theme that, although thought and reality are ultimately distinct, both are elements of one and the same reality—"a communion of living and interacting forces." The presentation recognizes a dialectical character to reality, in the form of opposing thrusts and tendencies, and a plurality of foci of demands to be met, all operating through and partially constituting history.

FOSS, Martin. *Symbol And Metaphor In Human Experience*. Princeton NJ Princeton Univ Pr 1949.

Contrary to what the title suggests, this book is not designed to offer a technical discussion of symbolic and metaphorical forms. Its author neither employs nor argues the many distinctions elaborated by investigators of signs and symbols since the turn of the century. Peirce receives one footnote, Cassirer two; no others are mentioned. According to Foss it is only about symbols that one can be definite, while the "metaphorical process" (like being, existence, and life) is all movement, transcendence, and tension, and as such resists adequate description.

FOSS, Martin. *The Idea Of Perfection In The Western World*. Princeton NJ Princeton Univ Pr 1946.

Various philosophic concepts of perfection are here introduced and criticized. This book concludes with a chapter on esthetics and ethics in which the author takes his stand with what he believes is the particular Christian conception of perfection.

FRAME, Donald M. *Montaigne's Discovery Of Man, The Humanization Of A Humanist*. NY Columbia Univ Pr 1955.

Montaigne's changing philosophy is presented against the background of the main experiences of his life in such a manner as to bring out the "organic quality" of his

intellectual development and to show how it arose out of those experiences. The author sees Montaigne's development as "a progressive liberation from apprehension and tutelage" in which an "early stoical humanism" gives way, after a skeptical crisis, to a mature philosophy of self-observation and eventually, through this, to the "discovery of others." Montaigne's final view is held to be "a relaxed and contented confidence in human nature," which the author believes to have represented a vast extension and democratization of the concepts of humanism.

FRANK, Jerome. *Courts On Trial: Myth And Reality In American Justice*. Princeton NJ Princeton Univ Pr 1949.

Recent studies of social trends in America, the influence of evolutionism and the growth of Pragmatism have all found a study of legal realism to be of importance to a proper understanding of the problems considered, particularly in the impetus given in the thoughts of the late Justice Holmes. This trend continues vitally and vibrantly in the works of such writers as the author under review.

FRANK, Jerome. *Fate And Freedom: A Philosophy For Free Americans*. NY Simon & Schuster 1945.

The central thesis is this: we have been flooded with fatalism since the 1880s when our history professors stormed back with their German PhD's and the determinisms of German philosophy. The author argues soundly that all of this is wholly alien to our fundamental American creed, a viewpoint which we should not forget in the face of problems of tomorrow.

FRANK, Philipp. *Foundations Of Physics*. Chicago Univ Of Chicago Pr 1946.

FRANK, Philipp. *Modern Science And Its Philosophy*. Cambridge Harvard Univ Pr 1949.

The author here brings together several journal contributions, a number of which appeared in his earlier *Physics and Philosophy*. He discusses logical positivism as an appropriate basic philosophy for science. There is also much of interest regarding the historical background of logical positivism and the influence upon the movement of such philosophers as Kant, Mach, Poincaré, Hilbert and others.

FRANK, Philipp. *Philosophy Of Science: The Link Between Science And Philosophy*. Englewood Cliffs NJ Prentice-Hall 1957.

The author defends an operationalist account and criticizes diverse idealistic and metaphysical views of the nature and role of science and scientific theories. Such concepts as causality and induction are discussed in the light of his general principles and are applied to a host of scientific hypotheses. Euclidean geometry, Newtonian mechanics, and the special theory of relativity are analyzed at length. The mathematical tools necessary for understanding these theories are introduced and explained.

FRANK, Philipp. *Relativity, A Richer Truth*. Boston Beacon Pr 1950.

This book is a collection of the author's papers in which he attempts to interpret the "real spirit of science" and to show that "relativism" has nothing to do with either skepticism or agnosticism and is in no way "hostile to the belief in ethical or democratic values."

FRANKEL, Charles. *The Faith Of Reason; The Idea Of Progress In The French Enlightenment*. NY King's Crown Pr 1948.

The Enlightenment could be interpreted from a number of other points of view, but

this monograph makes out a convincing case for a possible Deweyan "open-ended" conception of science as its major "moral" as against the many varieties of scientism. Everything depends upon "the scope and character of what the imagination will entertain" and then proceed to test. All those who have not lost heart in the age-old struggle toward the rational, but not mechanical, control of human affairs will find sober encouragement in Professor Frankel's contribution toward the rallying of the forces of liberalism.

FRANKENA, William K (ed). *Philosophy Of Education*. NY Macmillan 1965.

In an introductory essay, the author argues that a philosophy of education consists of two parts. These and other points concerning a philosophy of education, the author finds, in the selections chosen to make up the body of the book; selections from the writings of Dewey, Whitehead, Martain and Peters.

FRANKENA, William K. *Ethics*. Englewood Cliffs NJ Prentice Hall 1963.

In this relatively brief text, the author presents some of the standard materials of ethics and also develops his own views. The general aim is to stimulate the reader and help him to think more adequately about ethical questions. Most of the book is devoted to normative ethics, construed primarily as the development of a set of acceptable judgments of moral obligation and of moral value, and secondarily of nonmoral value. Attention is given to egoistic and deontological theories, to utilitarianism and justice, to moral value and responsibility, and to intrinsic value and the good life. The final chapter concerns metaethics, construed as the development of a theory of the meaning and justification of judgments of moral obligation, of moral value, and of nonmoral value. The last sentence of the book reads "Morality is made for man, not man for morality."

FRANKENA, William K. *Three Historical Philosophies Of Education: Aristotle, Kant, Dewey*. Chicago Scott Foresman 1965.

The author provides the student or reader with background knowledge in some depth, and some experience in thinking about these historically important educational philosophies. It is his hope that thereby one might become something of a philosopher of education, even as far as working out a normative philosophy of education of his own. Three questions for any normative philosophy of education are set forth: (1) What dispositions (or excellences) are to be cultivated in education? (2) Why are they to be regarded as excellences and cultivated? And (3) How are they to be cultivated? The author gives the answers to these questions found in these three philosophies of education, frequently making comparisons between them, and summarizes the comparisons in a chapter at the end.

FRANKENA, William K. *Arguments For Non-Naturalism About Intrinsic Value*. *Phil Stud* 1,56-60 Je 50.

FRANKENA, William K. *C I Lewis On The Ground And Nature Of The Right*. *J Phil* 61,489-496 S 64.

The author maintains (1) that, while Lewis is not a deontologist of the usual kinds, he does take as the major premiss of all ethical reasoning a formal principle variously known as the Golden Rule, the Categorical Imperative, or the Principle of Generalization, (2) that he seems to put forward two different views about the way in which this principle functions in determining what is right in a particular case, and (3) that he believes this principle to be or rest on an imperative which is *pragmatically a priori*, and hence he is a non-cognitivist of a very special sort.

FRANKENA, William K. *Comments On Charles Baylis's "C I Lewis's Theory Of Value And Ethics"*. *J Phil* 61,567-570 O 64.

FRANKENA, William K. *Ewing's Case Against Naturalistic Theories Of Value*. *Phil Rev* 57,481-492 S 48.

FRANKENA, William K. *G H Von Wright On The Theory Of Morals, Legislation, And Value*. *Ethics* 76,131-136 Ja 66.

In *The Logic of Preference* G H von Wright develops a formal logic of preference and upon it builds a definition of hedonic goodness (betterness, badness, etc.). The theory of preference, perhaps unwarrantedly, allows that preferences are transitive and the theory of value slight the difference between (in Dewey's words) prizing and appraising. In *Norm and Action*, von Wright provides the fundamentals of a logic of norms (deontic logic), of action, and of change. His deontic logic is misnamed since it covers only prescriptions. It suffers somewhat because of von Wright's confusion about the properties belonging to prescriptions as statements and as acts of will.

FRANKENA, William K. *Is The Philosophy Of Education Intellectually Respectable?* *Proc Phil Educ* 17,36-45 Mr 61.

FRANKENA, William K. *J D Wild On Responsibility*. *Phil Phenomenal Res* 27,90-96 S 66.

Wild argues that responsibility is identified with a certain type of causation, internal causation, and that to be responsible for something is to be its cause. Frankena thinks this is only partially true, and that it is only assumed that X's causing Y is a necessary condition of X's being held to be responsible for Y, but not a sufficient condition. Moreover, he thinks Wild mistaken in believing that everyone identifies responsibility with causation. Frankena agrees with Wild, that no attributions of responsibility can be translated into mere assertions or denials of causal connections; nevertheless, he does not think it has really been established.

FRANKENA, William K. Lewis' Imperatives Of Right. *Phil Stud* 14,25-27 1963.

The article goes into the question of how "a priori" should be understood in Lewis' *The Ground and Nature of the Right*. The author makes a distinction between what Lewis calls the basic imperative of right and statements making use of this principle. He concludes that Lewis, regarding the basic principle of morality, is some kind of non-cognitivist, that his basic principle is valid a priori, resting on the fact of human rationality.

FRANKENA, William K. Reply To Professor Wild's "Reply To Professor Frankena". *Phil Phenomenol Res* 27,103 S 66.

FRANKENA, William K. The Concept Of Morality. *J Phil* 63,688-696 N 66.

The author distinguishes the "descriptive" question "How do we actually use the term 'moral'?" from the "normative" question "How should we use the term 'moral'?" While basically concerned with the normative question, the author suggests that a correct answer to the descriptive question would provide a good reason for giving an analogous answer to the normative question. The discussion centers on two views concerning the normative question: one held by Hare, Ladd, Falk, existentialists, many religious thinkers and at least some Aristotelians, the other held by Toulmin, Baier, Singer, Strawson, and Kemp.

FRANKFORT, Henri. *The Intellectual Adventure Of Ancient Man; An Essay On Speculative Thought In The Ancient Near East*. Chicago Univ Of Chicago Pr 1946.

FRANKFURT, Harry G. *Demons, Dreamers, And Madmen*. Indianapolis Bobbs-Merrill 1970.

Professor Frankfurt's interpretation of the *Meditations*, which enables him to defend Descartes against various charges of circularity and inconsistency, is based upon an explication of Descartes' "analytic method." Descartes, he says, proceeds from a naive, commonsense viewpoint to his sophisticated philosophical position, admitting no philosophical principles into his argument which have not been established by previous analysis. The First Meditation, intended to show the unreliability of the senses is supposed to lay the groundwork for and parallel Descartes' subsequent attempt to validate reason. The book is in the form of a running commentary. Part One is devoted primarily to the First Meditation, and Part Two, to Descartes's validation of reason.

FRANKFURT, Harry G. Descartes' Validation Of Reason. *Amer Phil Quart* 2,149-156 Ap 65.

Descartes is contending with a scepticism which maintains that reliance on reason defeats itself by leading to reasons for mistrusting the reliability of reason. In proving the existence of a veracious deity, Descartes' aim is to show that the sceptic's *reductio* cannot be generated—that reason does not lead to a conclusion, such as that there is a demon, which provides a reason for doubting the reliability of reason. What is essential to his argument is not so much that God exists as that reason leads to the conclusion that He does. His procedure does not suffer from the circularity with which it is often charged. Metaphysical doubt concerning the truth of what is clearly and distinctly perceived is shown to be unreasonable by showing that a certain demonstration (of God's existence) has been accomplished. This does not require the assumption that what is clearly and distinctly perceived is true.

FRANKFURT, Harry G. Descartes' Discussion Of His Existence In The Second Meditation. *Phil Rev* 75,329-356 Jl 66.

Close analysis of the relevant texts shows that the intent of Descartes' discussion is not to prove that sum is true but to show that it is in a certain sense indubitable. Hintikka's claim that the *cogito* is best understood as performative is inconsistent with what Descartes actually says and involves the use of a defective logical apparatus. The objection that Descartes' argument for his existence is a *petitio principii* is averted by the interpretation offered.

FRANKFURT, Harry G. Memory And The Cartesian Circle. *Phil Rev* 71,504-511 O 62.

In "The Cartesian Circle" (*Journal of the History of Ideas*, Volume 16, Pages 324-338), Willis Doney argued that Descartes' "metaphysical doubt" was about memory and not about reason, and so Descartes was not attempting the impossible task of justifying reason by appealing to a veracious God, but was justifying memory. Frankfurt attacks this interpretation, arguing that it is inconsistent with what Descartes said, and that it does Descartes little service anyway.

FRANKFURT, Harry Gordon. The Dependence Of Mind. *Phil Phenomenol Res* 19,16-26 S 58.

The author discusses an elementary situation of awareness, and calls attention to the following: (1) that mind is dependent on reality other than itself, (2) that the mind's awareness of reality is objective, (3) that our knowledge of the occurrence of mind and of objective awareness, and possibly of other things, is synthetic, necessary and innate. He concludes that it may be possible on the basis of the above facts to do meaningful and constructive work in ontology.

FRANKFURT, Harry G. Peirce's Notion Of Abduction. *J Phil* 55,593-596 Jl 58.

FRANKFURT, Harry G. Philosophical Certainty. *Phil Rev* 71,303-327 Jl 62.

One argument used to show that no empirical statement is completely certain has been dubbed by its critic Norman Malcolm "the Verification Argument." It goes like this: an empirical statement is tested by checking predictions derived from it. But

since these predictions are infinite in number, we will never be sure that unchecked predictions confirm, rather than disconfirm, an empirical statement. Frankfurt agrees with Malcolm that this argument is unsound, but he argues that Malcolm's objections to it are mistaken. Frankfurt's own analysis of certainty in terms of risk taking is offered.

FRANKFURT, Harry G. Science And Philosophy: A Reply To Mr Pasch. *Phil Stud* 9,85-87 1958.

The author takes issue with one of Mr Pasch's arguments concerning the philosophic relevance of scientific evidence and theories about perception. Alan Pasch argues that epistemology is contaminated by circularity if it allows itself to be dependent upon science; for science assumes the validity of induction, and the justification of induction is itself an epistemological problem. The author contends that Pasch is guilty of an *ad hominem* argument in that nothing he says even touches upon the question of the validity of the argument, but rather he tries to show that those who insist that science has no place in the epistemological study of perception, and then use the method of induction, are hypocrites.

FREED, Lewis. *T S Eliot: Aesthetics And History*. La Salle IL Open Court 1962.

This book is best read as an introduction to the philosophic background of Eliot's criticism, written for non-philosophers. The chapters on Aristotle, Bradley, and Scholasticism cover familiar ground with diffidence and some naïveté; the non-philosophers may find them difficult. The most immediate influence is seen to be

- that of Bradley. Freed's central chapter is a gloss on Eliot's critical essays (chiefly "Tradition and the Individual Talent" and "The Function of Criticism") in the light of these influences. The final chapter, the title of which is the sub-title of the book, is a defense of scholarship and humanism, and a vindication of their interdependence.

- FRIED, Charles.** *An Anatomy Of Values: Problems Of Personal And Social Choice.* Cambridge Harvard Univ Pr 1970.
- The most general principle of morality covers all ends and actions significantly affecting other persons. All agents morally should act and be treated equally and impartially. Preference for family is for the family as such. The ends of justice, fairness, love, friendship, etc., involve order in the intrinsic values expressed within the shaping of the life-plan. Through society expressive (intrinsic) ends are realized. Law, marriage, especially privacy, reflect ends, not just means. Even death and its risks, plus change and uncertainty, take many forms in ordering rational choices. The principle of morality limits imposing risks on others, intrusions upon the liberty of others in general. Obligations further limit and structure rational choices. Just distribution involves what can and should be distributed.
- FRIED, Charles.** Natural Law And The Concept Of Justice. *Ethics* 74,237-254 Jl 64.
- This essay explores a concept of justice involving certain notions of equality and liberty and the tension between it and other moral concepts, particularly the relation between justice and the natural-law conception of moral philosophy. Natural-law theorists have feared that a concept of justice which permits each person to pursue his own interests as he sees fit requires forsaking the idea that there are fixed rational ends for human beings. But a natural-law position requires the concept of justice and is not incompatible with it.

- FRIEDMAN, M S (ed)** and Schilpp, Paul Arthur (ed). *The Philosophy Of Martin Buber.* La Salle IL Open Court 1967.
- Certainly it would have been ironic if Martin Buber, the "Apostle of dialogue", had missed his chance to join the dialogue sponsored by the *Library of Living Philosophers*. The essays, by such contemporary thinkers as Van Balthasar, Brunner, Hartshorne, Kuhn, Levinas, Marcel, Taubes and Wahl, touch every subject which Buber touched, except perhaps his social thought. All the essays are not equally valuable: some encounter Buber directly, others meet Buber only obliquely. The work presents many reflections on Buber's contribution to twentieth century thinking, and affords him the opportunity to justify his particular approach to philosophy, theology, ethics and Hasidism, and to clarify such key notions as "I and Thou", "Relationship" and "The Between."
- FRIEDMAN, Maurice S.** *Martin Buber: The Life Of Dialogue.* NY Harper 1960.
- A penetrating and comprehensive analysis of Buber's thought. The author has the gift of clarifying the direction and significance of Buber's ideas and of exhibiting their life for the reader. There is an examination of Buber's early thought, his interest in mysticism, hasidism, and concern with the problem of evil; this serves as the basis for understanding his mature philosophy of "I-thou." Friedman not only indicates the essential unity and continuity of Buber's thought, but he also shows its significance for education, psychology, ethics, and social philosophy.
- FRIEDMAN, Maurice S.** Martin Buber's Philosophy Of Education. *Educ Theor* 6,95-104 Ap 56.

FRIEDRICH, C J. Karl Llewellyn's Legal Realism In Retrospect. *Ethics* 74,201–207 Ap 64.

The essays collected in Llewellyn's *Jurisprudence: Realism in Theory and Practice* illustrate the development of American legal realism. Of particular interest are the discussions of justice and natural law, especially what Llewellyn calls the "lawyer's natural law," which, he says, provides a concrete guide for making positive law. Also of importance is Llewellyn's discussion of the nature of legal realism and its analyses of rules and rights.

FRIEDRICH, Carl J (ed). *Nomos IV: Liberty*. NY Atherton Pr 1962.

The volume contains twenty-four essays, most of which refer specifically to Mill's *On Liberty* in commemoration of the centennial of its publication. However, some of the papers investigate the concept of liberty in various historical contexts: and some papers attempt systematic interpretations of the concept.

FRIEDRICH, Carl J (ed). *Nomos V, The Public Interest*. NY Atherton Pr 1962.

"The viewpoints expressed in the various papers vary widely in outlook and methodology, ranging from a reasoned conviction that the public interest is a central concern of political and legal philosophy to the pointedly argued rejection of it as merely a facade for special interest and partisan position in the political battle."

FRIEDRICH, Carl J (ed). *Nomos VIII: Revolution*. NY Atherton Pr 1966.

Eleven essays on revolution by philosophers and political scientists have been arranged under three subject headings: General Theories of Revolution; Revolution, Ideology and International Order; and Marxist Revolution: its Moral Dimension. Part I concerns itself primarily with problems of definition, the evolution and history of the word *revolution*, and the exposition of types of revolution. Special aspects of the topic are the subject of entire essays. Part II is concerned with modern trends in revolution; it relates revolution to ideology and the International Order. Part III examines Marx's contributions to revolution. r C Tucker in a long essay defines Marxism as a "theory and program of revolution," while D Braybrooke questions the "empirical case for the proletarian revolution."

FRIEDRICH, Carl J (ed). *The Public Interest*. NY Atherton Pr 1962.

FRIEDRICH, Carl Joachim. *An Introduction To Political Theory*. NY Harper & Row 1967.

FRIEDRICH, Carl Joachim. *Constitutional Reason Of State; The Survival Of The Constitutional Order*. Providence RI Brown Univ Pr 1957.

The author traces the history of the doctrine of "reason of state." Among the views discussed, particularly in their bearing on the question of interval subversion, are those of Machiavelli, Harrington, Spinoza, Montesquieu, Calvin, Althusius, Milton, Locke, Kant and Hegel.

FRIEDRICH, Carl Joachim. *Inevitable Peace*. Cambridge Harvard Univ Pr 1948.

Professor Friedrich's book is an aggressive exposition of Kant's theory of world government and peace set in relation to Kant's moral philosophy and his philosophy of history on the one hand and to alternative philosophies of peace on the other. A new and highly readable translation of Kant's essay "Eternal Peace" is included in the Appendix. Within the limits of the space provided, Professor Friedrich has given a clear statement of Kant's political ideas.

FRIEDRICH, Carl J. Style As The Principle Of Historical Interpretation. *J Aes Art Crit* 14,143–151 D 55.

FRIEDRICH, Carl-Joachim. *The Philosophy Of Law In Historical Perspective*. Chicago Univ Of Chicago Pr 1958.

This is an English version, with variations and additions, of *Die Philosophie des Rechts in Historischer Perspektive*, which appeared in the "Enzyklopädie der Rechts- und Staatswissenschaft" (editor, Wolfgang Kundel, München). Professor Friedrich argues that legal questions involve a philosophy of law, and that every philosophy of law is part of some particular general philosophy. Contemporary problems are given an historical setting through a compact account of western philosophy of law, from the Old Testament period to the present. The author holds a philosophy of experience which attempts to make "all of human experience... fruitful for the progressive understanding" of law. He finds the source and objectivity of justice in the process of democratic political action.

FRIEDRICH, L W (ed). *The Nature Of Physical Knowledge*. Bloomington Indiana Univ Pr 1960.

This book shows how difficult it is for philosophers and scientists to find a common ground for discussion.

FRINGS, Manfred S (ed). *Heidegger And The Quest For Truth*. Chichago Quadrangle Books 1968.

FRINGS, Manfred S. *Max Scheler: A Concise Introduction Into The World Of A Great Thinker*. Pittsburgh Duquesne Univ Pr 1965.

Frings gives an expository presentation of Scheler's major ideas "in a concise and a condensed form." Chapters are devoted to Scheler's conception of the "bio-Psychic World," the "emotional Spheres," his idea of love and of "ressentiment," the "non-Formal Ethics of Values," and his philosophy of person, religious experience, knowledge, and the "Age of Adjustment." Man is seen as the "one subject in which ultimately all of Scheler's thoughts focus," and basic to Man is his placement of love as "the fundamental spiritual act." "Ressentiment" involves a weakness of the person which leads to a "damaged and poisoned *ordo amoris*." scheler's ethics is seen as an "emotional, transcendental objectivism." Frings holds that Scheler's Catholicism did not determine his philosophical evaluation of Christianity. Finally, Scheler's views on metaphysics are examined, with special attention given to the idea of "resistance" as the clue to the way in which reality is given. The book closes with a statement of the philosopher's view of the future of humanity in terms of the "world-openness of the sphere of the person."

FRISCH, Joseph C. Extension And Comprehension In Logic. NY Philosophical Lib 1969.

FRISCH, Morton J (ed) and Stevens, R G (ed). *American Political Thought: The Philosophic Dimension Of American Statesmanship*. NY Scribner 1971.

FRISCH, Morton J. Cooper's Notions Of The Americans: A Commentary On Democracy. *Ethics* 71,114–120 Ja 61.

FRISCH, Morton J. Democracy And The Class Struggle. *Ethics* 74,44–52 O 63.

Franklin Roosevelt's labor policies during the Great Depression did not intensify but tempered the class struggle. Roosevelt's labor policies, besides, were not nearly so radical as his critics have maintained. He believed that a democracy based on radical economic inequalities eventually ceases to be a democracy. His policies were in benign opposition to our basically Lockean tradition. Critics of the New Deal have wrongly promoted the idea that distributive justice is the preserve of Marxism.

FRISCH, Morton J. Franklin D Roosevelt And The Problem Of Democratic Liberty. *Ethics* 72,180–192 Ap 62.

FRITZ, Anita Dunlevy. Malebranche And The Immaterialism Of Berkeley. *Rev Metaph* 3,59–80 S 49.

FROESCHELS, Emil. *Philosophy In Wit*. NY Philosophical Lib 1948.

This book is a brief work presenting some psychoanalytic theories of wit and the conclusion is presented that only a philosophical theory of wit is tenable. "...nothing but the assumption of congenital knowledge of philosophy can explain the 'creation' of some kinds of wit and the understanding on the part of the one who laughs." The author premises that knowledge is congenital. Wit is explained in terms of this premise. It arises, says the author, from a disparity between what we congenitally know and the information conveyed in an example of wit.

FROMM, Erich (ed). *Socialist Humanism: An International Symposium*. Garden City NY Doubleday 1965.

This book focuses on socialist humanism, which is only one branch of humanism: the belief in a rational and abundant social and economic system, in which the full development of the individual is a condition for the full development of society and vice versa, and in which alienation is at a minimum. The articles in this volume deal chiefly with humanist socialism in its various theoretical and philosophical aspects, but there is also a critical attitude toward political realities and ideologies. The early humanistic papers of Marx on freedom and alienation are much discussed, but so is the plight of the individual in modern technological socialist societies.

FROMM, Erich. *Beyond The Chains Of Illusion, My Encounter With Marx And Freud*. NY Simon & Schuster 1962.

In this work Fromm traces the major influences in his own thinking: Marx and Freud. Throughout he finds similarities between them. Although Marx and Freud look to different solutions to the problem of alienation, both wish to destroy illusions and both refer to knowledge as a source of freedom. Fromm attempts to clarify the misconceptions and misinterpretations of historical materialism and sex and the unconscious, which are particularly due to the false clichés and ideologies which have developed since. For Fromm both Marx and Freud, when blended, can provide a significant basis for a humanistic philosophy.

FROMM, Erich. *Escape From Freedom*. NY Farrar & Rinehart 1941.

FROMM, Erich. *Man For Himself, An Inquiry Into The Psychology Of Ethics*. NY Rinehart 1947.

FROMM, Erich. *Psychoanalysis And Religion*. New Haven Yale Univ Pr 1950.

In this volume the author defines religion as any system of devotions which unites people in their thinking and action. He respects the traditional faiths for whatever they may have done and now do to promote justice, reason and brotherhood among men. He denies any monopoly claimed by a particular religion in superiority in ethical inspiration. He holds that the mission of the psychoanalyst is deeper than simply getting the deviant to behave like the normal individual.

FROMM, Erich. *The Heart Of Man: Its Genius For Good And Evil*. NY Harper & Row 1964.

FROMM, Erich. *The Sane Society*. NY Rinehart 1955.

Starting from the high incidence of suicide, homicide and alcoholism in the most prosperous and peaceful countries of Europe and America, he analyzes the objective needs of man and the failure of society to meet them. The drives are illustrated in matriarchal and patriarchal cultures in their negative and positive aspects, in patriotic nationalism, in idolatrous alienation under managerial capitalism, and in the contradictions of Marxist socialism leading to totalitarianism.

FROMM, Erich. A Global Philosophy Of Man. *Humanist* 26,117-122 Ag 66.

FROMM, Erich and De Martino, Richard and Suzuki, D T. *Zen Buddhism And Psychoanalysis*. NY Harper 1960.

Growing out of a workshop on Zen Buddhism and Psychoanalysis, sponsored by the Department of Psychoanalysis of the Medical School of the National University of Mexico in 1957, the book consists of three lectures which, according to Erich Fromm in the Foreword, "will be of particular value to psychiatrists and psychologists and to many other thoughtful people interested in the problem of man...." In the opening essay, "Lectures on Zen Buddhism," D T Suzuki discusses Zen Buddhism with special reference to its treatment of psychological problems, such as the unconscious and the self. In the second lecture Erich Fromm undertakes to show how the concepts of Zen Buddhism are relevant to, suggestive for and clarificatory of the theory and technique of psychoanalysis. In the concluding lecture, Richard De Martino provides "a general consideration of Zen Buddhism in its relation to the human situation."

FROMM, Erich. *Marx's Concept Of Man*. NY Ungar 1961.

This volume contains an English translation of Marx's main philosophical work, *Economics and Philosophical Manuscripts*, published for the first time in the United States, plus other pieces. Fromm provides an 83 page introduction, maintaining that Marx's philosophy, like much contemporary atheistic humanism and existentialism, provides a critique of alienation and dehumanization. For Marx the key issue is the individual man, even though in a social context, and how human personality needs to liberate and realize its capacities—ideals consonant with the Western Tradition of faith in man's possibilities. This humanism Fromm finds in both the early and later Marx. Fromm analyzes the reason behind the widespread misinterpretation of Marx, both in the West and the Communist countries. He concludes with quotations about Marx the man, from those who knew him directly, in order to dispel the misinformation about him and to reappraise his personality more positively.

FRONDIZI, Risieri. *The Nature Of The Self, A Functional Interpretation*. New Haven Yale Univ Pr 1953.

The first part is devoted to a critical analysis of the interpretation of the self presented by Descartes, Locke, Berkeley and Hume to show that they have led to a false dilemma, namely, either a substantial self (Descartes) or no self at all (Hume). The second part presents the author's own interpretation based on the notions of function and Gestalt. Function is a substitute for the traditional idea of substance, and Gestalt for the atomistic Humean interpretation. A chapter (V) is devoted to the problem of the existence of the self.

FRYE, Marilyn P. Inscriptions And Indirect Discourse. *J Phil* 61,767-772 D 64.

This paper examines an explanation offered by Penelhum: "Memory is a criterion of identity if (a) from the fact that someone remembers something it follows deductively that he did or witnessed it; and (b) one can establish that someone remembers an event without first establishing independently that he was (bodily) involved in it." Although this explanation seems plausible, it proves to be inadequate and incoherent. The phrase "the fact someone remembers" contains a crippling ambiguity about whether bodily identity is presupposed: if not there is no criterion, but if so (a) conflicts with (b). Other difficulties are that criteria do not serve as the basis for deductive inferences, that they need not be "established," and that a criterion of identity considers memory claims collectively rather than distributively.

FRYE, Northrop. *Anatomy Of Criticism*. Princeton NJ Princeton Univ Pr 1957.

This book consists of four essays, each dealing with a type of literary criticism, and of a critical introduction on the problem of distinguishing systematic and responsible literary criticism from mere history of taste. The first essay develops a theory of historical criticism in terms of fictional modes such as romance, tragedy, comedy, etc. The second essay is concerned with the construction of a theory of symbols, including archetypal symbols, i.e., those peculiarly effective in the expression of cultural values. The third essay explores archetypal symbols as they appear in myths; and the fourth develops a theory of literary genres. A glossary of terms and index are appended.

FUCHS, Alan E. Further Steps Toward A General Theory Of Freedom Of Expression. *William And Mary Law Review* 18,347-377 Wint 76.

In his recent books, Thomas Emerson presents a stimulating and influential theory that articulates and defends the right of free expression. The theory rests upon a distinction between a class of fully-protected "expressions" and a realm of regulable and therefore suppressible "actions." I argue that Emerson's manner of dividing all speech-acts and similar activities into "expressions" and "actions" is functionally equivalent to the traditional and generally discredited "clear and present danger" test. Both theories are criticized for their excessive vagueness. I briefly propose a revision of the clear and present danger theory that remedies this defect.

FULLER, Edmund (ed). *The Christian Idea Of Education*, 2 Vols. New Haven Yale Univ Pr 1962.

FULLER, Lon L. *The Morality Of Law*. New Haven Yale Univ Pr 1964.

This book furnishes an original conception of natural law. After distinguishing in Chapter I the morality of duty and the morality of aspiration, Fuller proceeds to examine and elucidate law in moral terms. Defining law roughly as "the enterprise of subjecting human conduct to the governance of rules," Fuller discerns that law has an internal morality, which he calls "a procedural version of natural law." In Chapter II Fuller presents the eight principles of the internal morality of law. Law is internally moral so far as it conforms to these rules. In addition to the internal morality of the law, however, there is what Fuller calls the external morality—i.e., the substantive aims of law. Although the inner morality of law may neutrally subserve different and even opposite aims, in Chapter IV Fuller explores the interaction of the internal and external moralities of law. He concludes that there is a substantive natural law and that its minimal content consists in "the objective of maintaining communication with our fellows."

FULLER, Lon L. Human Purpose And Natural Law. *J Phil* 53,697-704 O 56.

FULTON, James Street. *Science And Man's Hope*. NY Bookman 1954.

This critical examination of the meaning, status, and ethical value of science in the present world political and cultural crisis, holds that sciences, utilizable for good or evil, cannot affirm its own worth, yet embodies value insofar as it exemplifies

openness of spirit and creative decision. Thus, "while science itself cannot define man's hope, it can and does partly reveal it, because it constitutes a part of its fulfillment." In general terms, man's hope is that life as such is good, that "eliciting aliveness in events will convert... individual misfortune into a constituent of a more embracing good."

FULTON, James Street. Computing Machines And Minds. *Phil Today* 1,207-213 Fall 57.

FULTON, R B. *Adam Smith Speaks To Our Times; A Study Of His Ethical Ideas.* Boston Christopher 1963.

Smith's life, times, system of thought, and views on Christianity are briefly sketched. Then the relevance of Smith's thought to certain ethical issues is treated.

FULTON, Robert B. *Original Marxism: Estranged Offspring.* Boston Christopher 1960. The thought of the young Marx is here exhibited as an "estranged offspring" of the Judeo-Christian tradition. With the tradition, Marx believed in dependable order in nature, the value of man, and progress in history; but under the influence of Feuerbach, Strauss and Bauer, he rejected supernaturalism as false in fact and a hindrance to social reform. Fulton pleads for a more widespread recognition of similarities as well as differences between the rival faiths of Christianity and Communism.

FURFEY, Paul Hanly. *The Scope And Method Of Sociology: A Metasociological Treatise.* NY Harper 1953.

FURFEY, Paul Hanly. Sociology And Its Philosophical Aspects. *Mod Sch* 21,153-161 Mr 44.

FURLEY, David J. *Two Studies In The Greek Atomists.* Princeton NJ Princeton Univ Pr 1967.

The author sees the exponents of the theories of nature in the fourth century as forming two opposite theoretical camps: Atomists and Aristotelians. The former subscribed to an "atomic theory of matter, mechanical causation, the infinity of the universe, the plurality of worlds, and the transience of our world." In opposition, the Aristotelians emphasized "the continuous theory of matter, the supremacy of final causes, the finite universe, and the uniqueness and eternity of our world." The two studies which comprise this book are on (I) the Epicurean doctrine of indivisible magnitudes as minimal parts of atoms as stated in Epicurus' *Letter to Herodotus*, and (II) Aristotle's and Epicurus' theories on voluntary action. Both essays are written in the light of what the author believes to have been a controversy between Aristotle and the Atomists on the one hand, and the attempts of Epicurus and his followers to counteract the refutation of the Atomist theories on the other.

FUSS, Peter. *The Moral Philosophy Of Josiah Royce.* Cambridge Harvard Univ Pr 1965.

A clear and thorough exposition which makes Royce's subtle moral philosophy accessible to contemporary ethical theorists understandably put off by his style. Fuss convincingly presents Royce's moral philosophy as independent of his much ridiculed metaphysical absolutism and argues that his ethical theory is instead dependent on his surprisingly elaborate and sophisticated social psychology. Much of this psychology is to be found in unpublished writings of which Fuss makes extensive use, but he also performs a service by intelligently piecing together remarks scattered in the published works. Significant unpublished meta-ethical remarks are also discussed. Included is a treatment of his intricate and apparently unique argument for the principle of harmony as a second-order procedural moral principle. His famous insights into the relations between the individual and society are also painstakingly analyzed.

FUSS, Peter. Conscience. *Ethics* 74,111-120 Ja 64.

This essay denies that conscience is a faculty or source of moral knowledge, critically examines the views of Bishop Butler, J S Mill, and C D Broad on conscience, and offers a theory of conscience. The author maintains that conscience "... establishes in the moral agent a felt need or disposition to act in accordance with his knowledge or belief, giving him a sense of personal integrity when he does so as best he can, and a corresponding sense of inner failure, frustration or guilt when... he fails." Conscience thus is concerned with integrity. It does not inform us of the right and can be overwhelmed by desire. This theory of conscience can help us explain the conduct of an Eichmann who by no means was "conscience-less."

GABRIEL, Ralph H. *The Course Of American Democratic Thought: An Intellectual History Since 1815.* NY Ronald Pr 1940.

The author is a known historian who has produced various volumes on American political history. This time he attempts to give a history of the "American democratic thought" from 1815 to more recent times. What he actually presents is not only a history of American democratic thought, but a story of social and political philosophy in the United States of the respective period. Some sections of the work are very moving, especially those covering the period succeeding the Civil War. On the other side the author has been somewhat superficial when dealing with various intellectual movements prior to the War, which, in the reviewer's opinion, show an enormous wealth of variety and expression. Professor Gabriel, in the selection and distribution of material, has then almost forgotten a number of intellectual trends in American political life and has paid little attention to more recent times. With these reservations, one could warmly recommend the book to those interested in the history of political philosophy.

GAHRINGER, Robert E. A Note On Approving. *J Phil* 58,45-49 Ja 61.

The author argues that approval is more than liking or judging right; it involves a sense of obligation. This "ought," however, is not in the judgment itself. Judgments of approval, he asserts, are made in a context in which the principle of respect for persons is assumed. The obligation of which we are aware in approving or disapproving is introduced through an inference under the general principle of respect.

GAHRINGER, Robert E. Analytic Propositions And Philosophical Truths. *J Phil* 60,481-501 Ag 63.

The paper calls attention to two foundations of the confusion surrounding the analytic-synthetic distinction: One source is the common confusion of this distinction with other distinctions (for example, that between essential and accidental predication), and the second is the ambiguity at the basis of judgments of analyticity, which makes it possible for the analytic relation of meanings to be realized in two ways, through two different but not independent aspects of meaning. The paper then considers the prime example of synthetic propositions *a priori*: the propositions of philosophy.

GÁL, Gedeon. "Petrus De Trabibus On The Absolute And Ordained Power Of God" in *Studies Honoring Ignatius Charles Brady*, 283-292. St Bonaventure NY 1976.

The distinction, commonly employed by the schoolmen, between God's ordained and absolute power has frequently been misunderstood and misinterpreted. In the question *Utrum Deus possit plura facere*, Petrus de Trabibus treats the problem with such clarity that it can hardly be misunderstood: 'Ordained power' is the exercise of divine power according to God's foreknowledge and eternal preordination. 'Absolute power' is divine power considered absolutely or in the abstract, divorced—as it were—from all God's other attributes. It is obvious that God does nothing whatever by his 'absolute' power since it is impossible that He should act without foreknowledge, goodness, etc.

GALE, George. Phlogiston Revisited—Explanatory Models And Conceptual Change. *Chemistry* 41,16-20 Ap 68.

An examination is made of the history of phlogiston theory and oxygen theory, in order to show the types and uses of some of chemistry's explanatory models. The triumph of oxygen theory over phlogiston theory is seen to herald the emergence of quantitative over qualitative scientific description. It is concluded that scientists feel free to modify explanatory concepts when new observations of phenomena require a revised explanation; but given alternatives, the most realistic model is chosen. Progress in chemistry is obtained by modifying the explanatory hypotheses which reflect assumed principles.

GALE, George. Two Concepts Of Matter. *Chemistry* 46,13-16 N 73.

This article contends that Leibniz' anti-atomistic conception of matter is reaching its full development in the field concepts proposed in contemporary physics. The historical rise of atomism/corpuscularism is traced through its climax with Newtonian mechanics to its breakdown, occasioned by twentieth-century research into the subatomic world. The alternative force-field concept is treated more extensively; the discussion ranges from an explanation of Leibniz' original theories, through the conceptual development formulated by Bosovich and later by Faraday, to the concept's ultimate statement in the field theory of Maxwell and its contemporary applications.

GALE, Richard M (ed). *The Philosophy Of Time: A Collection Of Essays.* Garden City NY Doubleday 1967.

GALE, Richard M. "Can A Prediction 'Become True'?" *Phil Stud* 13,43-45 1962.

GALE, Richard M. "Endorsing Predictions". *Phil Rev* 70,376-385 JI 61.

GALE, Richard M. "Mysticism And Philosophy". *J Phil* 57,471-480 JI 60.

The author uses Walter Stace's *Time and Eternity* as a springboard for his own analysis of the key problems which mysticism poses for philosophy. These problems are the alleged ineffability of mystical experience, the relation between the so-called eternal and temporal orders of being, and the objectivity of mystical experiences. The author concludes that there is no way of getting rid of the contradiction between the claims of the mystic and those of the naturalist.

GALE, Richard M. A Reply On The Alleged Futurity Of Yesterday. *Phil Phenomenol Res* 24,421-422 Mr 64.

GALE, Richard M and Mc Gee, C Douglas and Tillman, Frank A. Ryle On "Use," "Usage," And "Utility". *Phil Stud* 15,57-59 1964.

The article examines Ryle's analysis of "Use," "Usage," and "Utility," charging that Ryle obscures rather than illuminates the distinctions between these concepts. The authors point out that central to Ryle's discussion is an analogy between words and tools, arguing that the analogy fails when Ryle attempts to make a distinction between use and usage. They argue that this failure can be seen in a disanalogy between words and tools in that words, unlike tools, are characteristically used in communication. To use a word correctly, they point out, the speaker must use it in conformity with linguistic custom; the use of a tool requires no such consonance with the customary usage of a group.

GALE, Richard M and Thalberg, Irving. The Generality Of Predictions. *J Phil* 62,195-210 Ap 65.

The contention of this paper is that any statement whose logical subject refers to a future individual, i.e., one that does not yet exist, must be general, while statements whose logical subjects refer to a past individual, i.e., one that no longer exists, may be singular. The reason for this asymmetry between prediction and retrodiction is that future individuals, unlike bygone things, cannot now be identified. There are two relevant senses in which individuals are identified: (1) by means of a demonstrative, and (2) by the use of a proper name. Future individuals are not identifiable in either sense, but past individuals may be singled out in sense (2). Why not name future individuals now? This suggestion misses the important difference between giving a name to an individual and making up a name for an individual. Future individuals may be referred to by the use of definite descriptions, but this is not identifying. A woman may describe her assailant but be unable to identify him.

GALE, Richard M. Dewey And The Problem Of The Alleged Futurity Of Yesterday. *Phil Phenomenol Res* 22,501-511 Je 62.

GALE, Richard M. Existence, Tense, And Presupposition. *Monist* 50,98-108 Ja 66.

An argument is presented to show that "exists" and "is present," along with their corresponding tenses, are not logical predicates of things and events, respectively. The premise of this argument is that Strawson's account of referring is correct. His account is amplified to show that a tensed subject-predicate statement presupposes an existential statement having the same tense. "S is (was, will be) P" presupposes "There now exists (existed, will exist) an s." When we apply this rule to statements of the form "S exists (existed, will exist)" it is found that they presuppose themselves: "There now exists (existed, will exist) an S." This entails that no utterance of "S exists (etc.);" could make a false statement, which is absurd. Similar considerations hold for statements having an event-expression for their subject and "is present (past, future)" for their predicate.

GALE, Richard M. McTaggart's Analysis Of Time. *Amer Phil Quart* 3,145-152 Ap 66.

McTaggart's claim that the B-Series is reducible to the A-Series is ambiguous in his writings. If the A-Series is a "pure" A-Series, i.e., one determined by past, present, and future unqualified, this claim is false; for it can be shown that "earlier than" cannot be analyzed in terms of past, present, and future, taken collectively. But if the A-Series is an "impure" A-Series, i.e., one determined by more past and more future as well as past, present, and future unqualified, then it is possible to reduce the B-Series to the A-Series by giving the following analysis of "earlier than" in terms of these five A-determinations taken collectively: in which "P" and "Q" are event-expressions. This shows that our concept of time involves not only the three concepts of past, present, and future unqualified, but also the notion of a structural order, and it was because of the latter that we had to introduce the concept of "more past (future) than."

GALE, Richard M. Natural Law And Human Rights. *Phil Phenomenol Res* 20,521-531 Je 60.

A distinction is drawn between the purpose of natural law, which is that of supporting a set of human rights that are politically basic, and, natural law as the metaphysical or meta-ethical ground for this normative belief in human rights. The article attempts to show that the meta-ethical concept of natural law is most unfortunate and should be dispensed with. In rejecting natural law one is not discarding everything, because human rights as a piece of normative ethics can be supported by other meta-ethical

positions. In conclusion, there are other ways of defending human rights than by telling myths or fairy tales, as do the defenders of natural law.

GALE, Richard M. Russell's Drill Sergeant And Bricklayer And Dewey's Logic. *J Phil* 56,401-405 Ap 59.

GALE, Richard M. Some Metaphysical Statements About Time. *J Phil* 60,225-236 Ap 63.

This paper explores the logical status of three metaphysical statements about time: the first infers the unreality of time in a world devoid of consciousness, the second, the unreality of time in a rigidly deterministic world, and the third, the unreality of time if history is cyclical. The general thesis concerning these statements is that they give revelation through paradox. It is argued that the three statements are really disguised verbal recommendations for the use of temporal language made in opposition to the rules of ordinary language. Through the dramatic technique of paradox they shock us into seeing the world in a new light, and in this way they give revelation.

GALE, Richard M. The Egocentric Particular And Token-Reflexive Analyses Of Tense. *Phil Rev* 73,213-228 Ap 64.

Gale attacks Russell's and Reichenbach's arguments that there is something subjective about the temporal perspectives of past, present and future. Their arguments go wrong in holding that the demonstrative "this" is temporally selective—that we can pick out our own "now" with a temporal "this" in the way that we can pick out our own "here" with a spatial "this." Gale also argues that no word or sentence is token-reflexive in the sense that it picks out itself.

GALE, Richard M. Why A Cause Cannot Be Later Than Its Effect. *Rev Metaph* 19,209-234 D 65.

That a cause cannot be later than its effect is an analytic truth. The author's purpose is to show why there cannot be any counter-stipulation—example to this truth, that is, any description of a constant conjunction between events which would justify our giving it up. He offers a preliminary analysis of causation before formulating and examining the necessary conditions for such a counter-stipulation—example. Then, having devised an example satisfying those conditions, he demonstrates that allowing a cause to follow its effect leads to absurdities in related concepts such as memory, intention, responsibility, and punishment.

GALLIE, W B. *Philosophy And The Historical Understanding.* NY Schocken Books 1964.

Professor Gallie concentrates mainly on two questions. (1) what history does, (2) how it is relevant to human institutions and practices, and in particular to the practice of philosophy? He emphasizes the difference between history and any science that is either deductive or causal. Turning to philosophy he seeks to illuminate philosophical controversy by the notion of "essentially contested concepts" in order to combine a maintenance of its value with a non-dogmatic attitude towards rival philosophies. He then attacks the notion of a unitary ethics and discusses sympathetically Collingwood's view of metaphysics as concerned not with criticizing or justifying principles but with showing what principles are the ultimate presuppositions in a given period.

GALSTON, William A. *Kant And The Problem Of History*. Chicago Univ Of Chicago Pr 1975.

As the author states: "This study was evoked by the contemporary crisis of liberal democracy." This concern is explored through an examination of Kant. It is the author's contention that Kant's thought on history is not peripheral to his philosophy but at its very center, for it is his effort to converge the dualism of morality and natural science. Both the presuppositions, especially the dualism of freedom and nature in Rousseau, and implications, especially as they emerged in what Hegel "borrowed" of Kant's position, are presented, a position in which is to be found the "first recognizable modern expression" of the concept of "history" with its problems of epistemology, expectation, transformation, and morality.

GARAN, D G. *The Paradox Of Pleasure And Relativity; The Psychological Causal Law*. NY Philosophical Lib 1963.

The "laws of psychological causation" are held to be based on the idea that "any motivation as satisfaction can be created only by creation of an equal opposite need, and any feeling of value can arise only from an equal opposite feeling of what we shall call disvalue. In other words, all psychological reactions have their causal source in their opposites." This idea is discussed in the light of abnormal behavior, psychoanalytic theory, values, epistemology, disease and history.

GARLAN, Edwin N. *Legal Realism And Justice*. NY Columbia Univ Pr 1941.

This volume focuses on the storm center of American politics, the judiciary, and seeks to deal with the two problems of what judges do and what they ought to do. Those who insist that the first problem is not dependent upon the second have been dubbed "legal realists," and it is of them that Mr Garlan writes.

GARNER, Harry H and Jeans, Robert F. Confrontation Technique In Psychotherapy: Some Existential Implications. *J Existent* 2,393-408 Spr 62.

GARNETT JR, Christopher Browne. *Taste: An Essay In Critical Imagination*. Jericho NY Exposition Pr 1968.

GARNETT JR, Christopher Browne. *The World Of Silence: A New Venture In Philosophy*. NY Greenwich Book 1967.

GARNETT, A Campbell. *A Realistic Philosophy Of Religion*. Chicago Willett Clark 1942.

The conflict between egoistic and altruistic tendencies of human nature is said to be the basis, the immediate datum, of religious experience. God is that within us which reaches out in the seeking of the good of others. God is immanent yet transcendental. God is personal because the pattern of the human will is fundamental in moral religious experience. We have reasons to suppose this will to be ontologically grounded. Before our wills there was the larger environment of will. Our knowledge of God although greatly limited is real.

GARNETT, A Campbell. *Can Ideals And Norms Be Justified?* Stockton CA Col Of The Pacific 1955.

In these four Tully Cleon Knowles Lectures in Philosophy for 1955, Professor Garnett discusses the Apollonian, Dionysian, and Christian ideals, concluding that "the basic moral principles of the Hebrew-Christian tradition can be supported by the methods of naturalistic ethical inquiry."

GARNETT, A Campbell. *Contemporary Thought And The Return To Religion*. Lexington KY Col Of The Bible 1960.

This is an analysis of some of the practical and especially the theoretical aspects of the "religious revival in America today." Garnett argues that the religious revival is due to the social gospel of a generation ago. Then he examines neo-Thomism, Existentialism, and "Realism" as the intellectual positions which have been most prominent in this religious revival. The first two are found inadequate in certain respects and Garnett opts for a "personalistic theism" expressed in "naturalistic" language where the ultimate categories are event, quality, and relation. The final chapter discusses the problem of authority and suggests that the locus of authority is the church. The problem then reduces to the general problem of the authority of an institution over its members.

GARNETT, A Campbell. *Religion And The Moral Life*. NY Ronald Pr 1955.

The author defends the thesis that ethics is necessarily dependent upon religion, since the latter must furnish the needed "object of devotion beyond human society" which can give meaning to ethics. In turn, it is through an ethical concept, that of the "critical conscience," that we are led beyond reason and mystical experience in a "leap in faith" to accept theism. Secularism, typified by John Dewey, and humanism, represented by Erich Fromm, are rejected as inadequate bases for ethical systems because they provide no object for devotion. The author's "simple theism," in which faith perceives an immanent, personal God best exemplified in Christ, holds that "love" is the fundamental ethical relationship, and several examples of its operation in contemporary situations are supplied.

GARNETT, A Campbell. *The Perceptual Process*. Madison 1965.

This is a discussion of the problems of perception and mental activity from a point of view not often taken. Garnett combines use of the methods of linguistic analysis with the approach of those who are concerned with the realism-dualism conflicts in American Philosophy. He argues that neither the linguistic analysis standpoint nor the traditional realism-dualism views are satisfactory in and of themselves. An interesting approach to the perceptual process, this discussion's most distinguishing and significant aspect is its well-developed interlocking consideration of views which are seldom so well compared.

GARNETT, A Campbell. A Naturalistic Interpretation Of Mind. *J Phil* 45,589-602 O 48.

GARNETT, A Campbell. A New Look At The Categorical Imperative. *Ethics* 74,295-299 Jl 64.

This discussion of Marcus G Singer's generalization principle in *Generalization in Ethics* argues that Singer succeeds in validating the negative but not the affirmative use of the categorical imperative. That is, universalizability is a necessary but not sufficient condition of the validity of an ethical claim. Nevertheless the categorical imperative can be used to establish positive duties, e.g., to establish Kant's kingdom of ends. But it cannot solve all ethical problems and cannot be regarded as the sole moral principle.

While remaining in essential agreement with much of Marcus Singer's analysis in *Generalization in Ethics*, the author sets out to criticize one particular thesis of Singer's in an attempt to argue that the same good reasons can be given to show why we ought to obey certain rules of conduct, or moral rules, as can be given to show why we ought to cultivate the higher virtues (e.g. benevolence, generosity, courage) that go beyond rules.

- GARNETT, Arthur Campbell.** *The Moral Nature Of Man; A Critical Evaluation Of Ethical Principles.* NY Ronald Pr 1952.
In essence, this book is a brief but systematic exposition of the major problems of ethics, e.g., the meaning of ethical terms, basis of moral obligation, grounds of ethical judgment, relation of ethical ends and particular principles of justice, freedom, and responsibility, the relation of ethics and religion. The book argues that the history of the growth of ethical ideals and of ethical criticism requires a reinterpretation of current naturalistic theories of the nature of man, to do greater justice to his spiritual life. The book attempts to disclose a basis for a universalistic, teleological ethics by means of a fresh analysis of the moral consciousness of man carried through with the aid of contemporary psychology and the history of moral ideas from the primitive to modern.

- GARVER, Newton.** Criterion Of Personal Identity. *J Phil* 61,779-783 D 64.
Graver seeks to illustrate the elusiveness of the philosophical use of the term "criterion" and "the pitfalls of pat explications" by examining in detail a simple attempt at elucidation offered by Terence Penelhum in his "Personal Identity, Memory and Survival"—which is directed at Sydney Shoemaker's paper "Personal Identity and Memory." Garver concludes that Penelhum's failure to give a coherent statement of certain features of criteria suggests that perhaps the concept "criterion" is itself not coherent.
- GARVER, Newton.** Varieties Of Use And Mention. *Phil Phenomenol Res* 26,230-238 D 65.
Some ways of stating the useful distinction between use and mention make it seem (1) that there are cases of "pure mention" and (2) that the distinction in its simple form exhausts the possible modes of occurrence of words. The Postulate of Pure Mention rests on an interesting confusion of an index with a function, and hence lacks plausibility. The Postulate of Comprehensiveness leads to an impoverished logical vocabulary that has been the source of several fallacious arguments, including Russell's famous argument against Frege in "On Denoting." To preserve the distinction from abuse, it must be recognized that these two postulates are false and that there are varieties of both use and mention.
- GARVER, Newton.** Wittgenstein On Private Language. *Phil Phenomenol Res* 20,389-396 Mr 60.
Could we imagine a language in which a person could express his inner sensations or experiences for his private use? The author expatiates Wittgenstein's views, giving one, an expose of certain considerations which lend plausibility to the notion of a private language, and two, a reduction *ad absurdum* of the notion of a private language or private understanding. The utility of a sign and its intelligibility in the common language go hand in hand; a sign which is supposed to be simply "associated" with a sensation cannot have a use. Hence, any sign which has a use cannot be simply associated with a sensation.

The authors present a careful review of the problems of psycho-surgery. In addition to reviewing significant prior practices, problems of consent and issues of social policy, the essays that make up the text are offered as a "prototype" of the problems of bio-ethics now before us and fated to grow in the future. Clearly and simple written, the text is available to a non-technical audience.
- GEACH, P T** and Anscombe, G E M. *Three Philosophers: Aristotle, Aquinas, Frege.* Ithaca NY Cornell Univ Pr 1961.
- GEACH, P T.** Ascriptivism. *Phil Rev* 69,221-225 Ap 60.
- GEACH, P T.** Assertion. *Phil Rev* 74,449-465 O 65.
A proposition's meaning and truth-value are not affected by its being or not being an asserted proposition; mistakes about this Fregean thesis have been widespread and serious. Negation is part of a proposition, asserted or unasserted, not a polar opposite to assertion. No part of a proposition—e.g., the copula, the predicate, the verb 'exists'—can rightly be regarded as the bearer of assertive force; for any such part occurs in unasserted propositions, in the same use. Philosophical theories that maintain assertory sentences are not descriptive break down because their authors have overlooked the related non-assertory uses of the same sentences. Neglect of the Fregean point about assertion is usually a symptom of a generally low regard for formal logic as an instrument in philosophy.

GEACH, P T. On Complex Terms. *J Phil* 62,5-7 Ja 65.

At least some complex terms forming a common noun and a defining relative clause cannot be treated as genuine logical units, fulfilling the same logical role as the syntactically simple terms that could grammatically take their place. This comes out especially when the complex term is embedded in a context containing a dangling pronoun that looks back to *part* of the complex term: e.g., "One woman whom every tribesman admires is his wife." or "Almost every person who borrowed a book from Snead eventually returned it." These examples are urged in favor of the author's view that such logical terms are *never* genuine logical units.

GEACH, P T. Plato's *Euthyphro*: An Analysis And Commentary. *Monist* 50,369-382 Jl 66.

This paper emphasizes various elements in the *Euthyphro* that tie up with important contemporary discussions, such as: (1) the demand that terms be defined; (2) the alleged distinction between *decidable* factual disputes and *undecidable* moral disputes; (3) arguments that terms must "mean different things" (in what sense?) because putting one for the other alters the truth-value of a proposition; (4) the special sense of "because" in which we say that a thing is approved "because" of its being X.

GEACH, P T. The Third Man Again. *Phil Rev* 65,72-82 Ja 56.

GEACH, Peter Thomas. *God And The Soul*. NY Schocken Books 1969.

GEACH, Peter Thomas. *Reference And Generality: An Examination Of Some Medieval And Modern Theories*. Ithaca NY Cornell Univ Pr 1962.

The book has interest for several usually divergent groups: to those interested in a systematic analysis of ordinary language, to formal logicians interested in the rationale for translating some logical words of ordinary language into the quantifiers and bound variables of modern symbolism, to the historian of logic for a discussion not only of thirteenth and fourteenth century logic but also of Frege and Russell, and to the philosopher of logic.

GEACH, Peter Thomas. Quine On Classes And Properties. *Phil Rev* 62,409-412 Jl 53.

GEACH, Peter. *Mental Acts, Their Content And Their Objects*. NY Humanities Pr 1957.

This book is an effective demonstration that the techniques of Oxford analysis can be put to constructive as well as to critical philosophic use. Mr Geach considers a number of connected topics—among them the nature and formation of concepts, judgment, and sensation—advancing positive theses while rejecting views he holds to be false. He is particularly opposed to the "abstractionist" doctrine of concept formation. Concepts, he holds, are not capacities for recognizing recurrent features in experience, but "mental abilities, exercised in acts of judgment, and expressed in the intelligent use of words," though not, he adds, "exclusively in such use."

GEACH, Peter. Class And Concept. *Phil Rev* 64,561-570 O 55.

GEAN, W D. Reasons And Causes. *Rev Metaph* 19,667-688 Je 66.

A number of contemporary philosophers have contended that when we explain action or behavior by giving the agent's reason for it, we are not providing a causal explanation. To the contrary, the author argues here that reason-explanations can plausibly be viewed as a type of causal explanation. In support of his position he criticizes arguments offered by A I Melden, M F Cohen, and others, and points out certain features which reason-explanations have in common with ordinary causal explanations.

GEISLER, Norman L. *Christian Apologetics*. Grand Rapids MI Baker Book House 1976. The first two-thirds of this work is a philosophical defense of a theistic world-view. Part one is an examination of the various tests for truth, including agnosticism, rationalism, fideism, experientialism, pragmatism, combinationalism and undeniability. Only the latter is found to be an adequate test for the truth of a world-view. Part two applies the test of undeniability (called self-stultification by

others) to deism, pantheism, panentheism, atheism and theism. Only the last is found not self-defeating and, therefore, true. Part three answers in the affirmative the Question as to whether within a theistic world miracles are possible, history is knowable or Christianity is credible.

GEISLER, Norman L. *Ethics: Alternatives And Issues*. Grand Rapids MI Zondervan 1971.

N Geisler presents six alternative ethical positions: antinomianism, generalism, situationalism, non-conflicting absolutism, and hierarchicalism. For each position, he describes several leading proponents and provides an evaluation, arguing for the view that there are hierarchically ordered universal norms. The second section is a discussion of pertinent ethical issues from a Christian point of view: self-love, war, social responsibility, sex, birth control, abortion, mercy killing, suicide, capital punishment, and ecology.

GEISLER, Norman L. *Philosophy Of Religion*. Grand Rapids MI Zondervan 1974.

Seeking to provide a basic text on philosophy of religion, Dr Geisler presents sections on religious experience, theistic proofs, religious language, and theodicy. Part One analyzes religious experience, and calls for critical testing. Part Two describes and evaluates traditional proofs and offers an extended version of the cosmological argument. Part Three evaluates negative, positive, and model religious language, and argues for analogical predication. Part Four provides Christian solutions to the metaphysical, moral, and physical problem of evil, based on human will.

GEISLER, Norman. "Process Theology" in *Tensions In Contemporary Theology*, Stanley N Gundry And Alan F Johnson (eds). Chicago Moody Pr 1976.

Dr Geisler provides a succinct presentation and evaluation of process theology. He expounds the contributions of Whitehead, Hartshorne, Cobb, Pike, Odgen, and Pittenger. In the critical section, he credits process theology with reminding Christians of the reality of God's relationship with the world, the inadequacy of static Greek categories, and the need to account for natural revelation, creativity, and all Biblical data. He refutes process criticism of traditional theism with Thomistic arguments, and points out problems in process metaphysics, theodicy, Christology, and hermeneutics.

GEISLER, Norman. Philosophy: Roots Of Vain Deceit. *Christianity Today* 21,8-12 20 My 77.

The problem in the discussion over Biblical inerrancy is epistemological, being based in the Kantian bifurcation of appearance and reality. This led to Kierkegaard's understanding of revelation as personal and thus not truly descriptive and errorless, and to Wittgenstein's linguistic analysis. Both are "acognitive," holding that one cannot speak meaningfully and non-contradictorily about God. Such a position is dangerous for evangelicals. Dr Geisler calls for awareness of philosophy in order to beware of it, and for good philosophy to counteract the trend.

GELLHORN, Walter. *Individual Freedom And Governmental Restraints*. Baton Rouge 1956.

Professor Gellhorn of the Columbia University Law School traces three recent developments that encroach upon the freedom of the individual: (1) the growth of the power of administrative agencies, (2) varied restraints upon book reading, and (3) limitations upon "the right to make a living." He concludes that "to remain muscularly free, we must see to it that freedom receives constant exercise... so that the blessings of liberty hard won in the past should not be softly lost in the present through slothfulness, inattention, or doubt."

GELLNER, Ernest A. *Words And Things: A Critical Account Of Linguistic Philosophy And A Study In Ideology*. Boston Beacon Pr 1959.

This book professes to be a "critical account of Linguistic Philosophy and a study of Ideology." It is clearly written and abounds with entertaining aphorisms. Philosophically important objections against the Oxford School are developed in the first hundred pages.

GELVEN, Michael. *A Commentary On Heidegger's Being And Time*. NY Harper & Row 1970.

This section by section interpretation of the by now classic volume [1927] of modern Existentialism attempts to clarify, explain, or often restate in more familiar language, the intricacies of Heidegger's philosophy. The commentator follows closely the English version of *Being and Time*, always emphasizing the connections between traditional philosophy and the Heideggerian insights which were cast in new and most challenging terms. After a brief introduction of Kant's transcendental perspective from which the mind observes and describes its own functions, each section is presented in its own ground and as interconnected with the whole treatment of human existence in all its perspectives and modes.

- GENDIN, Sidney.** The Artist's Intentions. *J Aes Art Crit* 23,193-196 Wint 64.
- GENDLIN, Eugene T.** *Experiencing And The Creation Of Meaning: A Philosophical And Psychological Approach To The Subjective.* NY Free Pr 1962.
- Dr Gendlin's approach to questions of meaning mixes philosophical and psychological modes in a way supposed to provide mutual illumination. 'Felt' and 'experienced meaning' are related to 'concepts' and to cognition. The subject is rich and deserves exploration, but the key terms of this discussion lack something in clarity, and the effect of the whole is one of obscure suggestiveness.

- GENDLIN, Eugene.** What Are The Grounds Of Explication: A Basic Problem In Linguistic Analysis And In Phenomenology. *Monist* 49,137-164 Ja 65.
- Separate analyses of Austin's method, and Sartre's, yield 14 propositions equally applicable to both. Both feature *explication* (newly discriminated situational aspects for when to use a word; phenomenological descriptions). Explications state what is already in common "knowledge" or "experience," but only *implicitly* in them, not contained as given units or schemes ("no handy denotations"; "no thematized contents"). Therefore, explication can't be a "reading off." The criterion isn't correspondence. Experience isn't a static, copyable order. It is activity, using, experiencing. In both methods all models, constructs, external or logical criteria are questionable unless based on explication.

- GENTZEN, Gerhard.** Investigations Into Logical Deduction. *Amer Phil Quart* 1,288-306 O 64.
- In order to minimize the discrepancy between deductive procedures of proof in practical mathematics and, as he mentions, the deductive formalisms of Frege, Russell and Hilbert, Gentzen developed a calculus of natural deduction, both intuitionistically and classically, and first published it in his "Investigations" in 1934. A closer study of the specific properties of this calculus led Gentzen to the discovery of a general theorem, the *Hauptsatz*. It says that every purely logical proof can be reduced to a determinate, though not unique, normal form. For the purpose of enunciating and proving the *Hauptsatz* in a convenient form, Gentzen introduced another calculus which he then showed to be equivalent to his earlier calculus. The usefulness of the *Hauptsatz* is illustrated by the development of a decision procedure for intuitionist propositional logic and the presentation of a new proof of the consistency of classical arithmetic without complete induction.

- GERBER, Rudolph J.** Marcel's Phenomenology Of The Human Body. *Int Phil Quart* 4,443-463 S 64.
- Like Fichte, Marcel philosophizes on the "body" theme from a need for salvation, a basic desire to recall philosophy from idealism, Manicheism, and the Cartesian-Kantian dualism of subject-object epistemology to an existential realism wherein "my body" constitutes not only the indubitable assurance of personal existence but also the inescapable introduction to participation in the mystery of being itself. Thus for Marcel, man's incarnate status refutes idealism, undermines psychophysical parallelism, underscores the unity of man, and becomes the unbracketed starting-point for metaphysics. Gerber concludes by noting that Marcel's doctrine on the body yields healthy applications in psychology and theology, as well as reinforcing the philosophical views of John Dewey and Teilhard de Chardin that man, not useless passion, finds the world a vale of soul-making and the body his necessary means for achieving unified personal development in his worldly existence.
- GERBER, William.** *American Liberalism: Laudable End, Controversial Means.* Boston Twayne 1975.
- Gerber seeks to provide both a philosophical critique of American Liberalism and an historical perspective on the competing appeal of liberalism and non-liberalism in the turbulent arena of American politics, economics and society. The frequent funeral dispatches stating or predicting liberalism's death or crisis have flowed from "here and now observations" throughout this century. Gerber examines such pronouncements, the evidence of statistical trends, conceptual development, and the fundamental conflict of liberalism versus non-liberalism. After defining the liberal hypothesis in the first three chapters, he turns in the remaining 9 chapters to three questions: (1) Who are the American Liberals?, (2) What has been the historical strength of American Liberalism? and (3) What are the specific issues central to the movement and its future?
- GERBER, William.** *The Domain Of Reality.* NY King's Crown Pr 1946.
- Asking the question, "What is it to be real?" the writer seeks to discover and mark off the boundaries of reality in such a way as to provide an objective test of whether or not anything is real, to keep in consonance with common ways of speaking, and to be neutral as between opposing doctrines of the nature of reality.

- GERHART, Eugene C.** *American Liberty And "Natural Law".* Boston Beacon Pr 1953.
- The reason why Mr Gerhart, who is an editor of the *American Bar Association Journal*, places "natural law" in quotation marks is because he wishes to contrast its use by ecclesiastical authoritarianism with its place in the theory of American democracy. "The issue is: Who will expound the natural law?" The author agrees with Justices Holmes and Vinson that doubt is primary, that there are no absolutes, and that the task of democracy is unceasing rational inquiry.

GERSHENSON, Daniel E and Greenberg, Daniel A. *Anaxagoras And The Birth Of Physics*. NY Blaisdell 1964.

This study of Anaxagoras, who is identified as being "the first thinker of repute who was a scientist in the sense in which we use the term today," includes, in Part I, "all that we know with reasonable surety about Anaxagoras and his scientific doctrines," in Part II, "every reference to Anaxagoras by name in ancient literature (and) in full"; and in Part III, "various aspects of the traditions, ancient and modern, about Anaxagoras" are considered, "the relationship between Anaxagoras and other thinkers (being) explicitly excluded." Part III, includes chapters "On the Reliability of the Sources," on "Ancient Traditions about Anaxagoras," on "The So-Called Fragments" in which the work of Hermann Diels is subject to exacting criticism, and "A Survey of Modern Interpretations of Anaxagoras's Work."

GERSHENSON, Daniel E and Greenberg, Daniel A. *The Natural Philosopher*, VI. NY Blaisdell 1963.

A series of volumes containing papers devoted to the history of physics and the influence of physics on human thought and affairs. Among the selections printed in these first three volumes are a new translation of the First Chapter of Aristotle's *Metaphysica*, an article on the physics of the Eleatic school, and articles on Lavoisier, Einstein, Faraday, Planck, Rutherford, and others.

GERT, Bernard. *The Moral Rules: A New Rational Foundation For Morality*. NY Harper & Row 1970.

GERT, Bernard. Imagination And Verifiability. *Phil Stud* 16,44-48 1965.

The article goes into certain disagreements that arise in discussing the sense or nonsense of propositions. According to the author such disagreements do not usually hinge on accepting or rejecting the verifiability principle, but on whether or not the statement in question can really be verified. He suggests that many statements rejected as senseless because they can not be verified do, in fact, make sense; not, however, in spite of their unverifiability, but because they can be verified. He takes up Wittgenstein's claim that the assumption that different sections of mankind have different sensations of red is unverifiable and hence meaningless, arguing that our private visual sensations are not what is important, but that the important thing is to correctly identify colors, with all the practical advantages that follow from this.

GEWIRTH, Alan. The Generalization Principle. *Phil Rev* 73,229-242 Ap 64.

Gewirth criticizes Marcus Singer's treatment of the generalization principle (What is right for one person must be right for any similar person in similar circumstances) in his book *Generalization in Ethics* on several grounds. Singer's claim that the generalization principle (GP) is a condition exclusively of morally right acts or judgments is open to counterexamples. His use of the GP makes it a useless tautology if he insists that there can be no moral reasons apart from the GP. The GP does not justify egalitarianism as Singer claims. And Singer needs to establish criteria for "relevant similarities" and "undesirable consequences."

GILBERT, Margaret. "On Being Categorized In The Speech Of Others" in *Life Sentences*, R Harré (ed), 10-20. NY Wiley 1976.

Some psychologists argue that in general we self-ascribe characteristics according to others' perceived reactions to us. In illustration Michael Argyle cites a case involving the self-ascription of popularity. But popularity is what I here call a 'reaction-determined characteristic, that is, a characteristic such that certain others' reacting to someone in a certain way is logically sufficient for his having it. The general import of cases involving such characteristics needs careful examination and I argue that in fact Argyle's case does not support the general thesis in question. I conclude that 'ordinary language' analysis is important for the evaluation of psychological data.

- GILES, H Harry.** *Education And Human Motivation.* NY Philosophical Lib 1957.
- The six papers presented here are intended to suggest an integrative theory of human behavior built around the concept of motivation. The author examines the meaning and uses of "growth" in the biological and psychological sciences and attempts to draw the implications for social control and the educational process. Though written from within the tradition of John Dewey's educational philosophy, the book tries to extend that philosophy in the light of recent developments.
- GILL, Jerry H.** *The Possibility Of Religious Knowledge.* Grand Rapids MI Eerdmans 1971.
- GILL, Jerry H.** Wittgenstein's Concept Of Truth. *Int Phil Quart* 6,71-80 Mr 66.
- The main concern is the examination of the much neglected passages in the *Investigations* that deal with the concept of truth. Truth, according to Wittgenstein, is a function of particular, but over-lapping, language-games. However, this does not result in a relativistic theory of knowledge, since these language-games arise out of common "forms of life" which are neither arbitrary nor inflexible. Truth, then, is a contextual concept in Wittgenstein's view. Moreover, he seems to make room for a form of "tacit knowledge" in his discussion of "imponderable evidence." Finally, there exist certain contrasts and correlations between Wittgenstein's view and those of Rationalism and Empiricism, and Pragmatism, respectively.

- GILLESPIE, Norman C.** The Business Of Ethics. *Michigan Business Review* 27,1-4 1975.
- Some standard arguments, advanced by business executives to justify their behavior, are (1) that what they are doing is generally done, so that their conduct is not unusual, but expected, (2) that if they do not do it, someone else will, and (3) that in business it is financially necessary to compete on the same level as everyone else. In this paper, I examine the moral merits of each of these claims, question how much they justify, and show that while each is relevant in morally assessing business decisions, none are sufficient to exempt business practices from moral review. I argue that moral rules do apply, and explain how they apply, to business decisions.

- GILSON, Étienne.** *Elements Of Christian Philosophy.* Garden City NY Doubleday 1960.
- This book is intended as a sort of guide to the Christian philosophy of St Thomas Aquinas, by showing that "the only true gateway" to the proper understanding of Thomism involves a certain metaphysical notion of being tied up with a certain notion of the Christian God. As a theologian, St Thomas felt free to draw arguments from many diverse philosophies; in addition, his writings presuppose an elementary knowledge of Aristotle; hence many students find difficulty in grasping the nature of Thomism. This book is intended to set forth those key notions and doctrinal positions, not always explicitly stated, which are essential for a complete understanding of St Thomas, in particular the way the theologian uses philosophy, the Thomistic notion of being, and the impact of this same notion on the many philosophical problems in whose data it is included. There are extensive notes following the text, a bibliography, and indices of names and subject matter.
- GILSON, Etienne.** *God And Philosophy.* New Haven Yale Univ Pr 1941.
- Professor Gilson tells us that the problem with which his lectures are concerned is the metaphysical problem of God. In particular he examines the relation which obtains between our notion of God and the demonstration of his existence.

- GILSON, Etienne.** *History Of Philosophy And Philosophical Education.* Milwaukee Marquette Univ Pr 1948.
- GILSON, Etienne.** *Painting And Reality, The A W Mellon Lectures In The Fine Arts, 1955.* NY Pantheon Books 1957.
- This book begins with the question, "What can a philosopher learn from painting?" The answers are formulated in terms of a set of problems. The first is to determine the status of the painting as a physical existence; the second to determine the nature of individuality and originality in painting; the third to inquire into the temporal duration of painting. Solutions to these problems are followed by a discussion of traditional aesthetic issues. The book concludes with a discussion of modern painting as a special, revolutionary development which demands an interpretive explanation and can readily be justified.
- GILSON, Etienne.** *Reason And Revelation In The Middle Ages.* NY Scribner's 1948.

- GILSON, Étienne.** *The Spirit Of Thomism.* NY Kennedy 1964.
- Gilson's general theme is that on which he has written much lately: the nature and status of Christian philosophy within the context of the thought of Thomas Aquinas. He argues that Thomistic metaphysics and *sacra doctrina* both have God as object, that they are not two distinct "sciences" but differ as a science does from wisdom. In a key lecture on the text of Exodus 3:14, Gilson uses the famous "*Sum Qui Sum*" passage to expound the view that *esse* is not only the most distinctive name of God but is the very act of being. This is the central thesis of those who regard Thomism as a distinctive version of existentialism in metaphysics. In this sense, the present book develops the position taken in Gilson's *Elements Of Christian Philosophy*.

- GINSBURG, Mitchell.** *Mind And Belief: Psychological Ascription And The Concept Of Belief.* NY Humanities Pr 1972.
- This book briefly canvasses some previous accounts of the nature of belief and of what it is to ascribe a belief or psychological state to an individual and develops a theory in sixteen closely formulated propositions. It further considers what is involved in the self-ascription or belief, the issue of unconscious belief, the parenthetical verbs making belief claims, making distinctions between mind-like machines and mind possessors. The final part is a general consideration of problems of application and range for theories using mentalistic concepts.
- GINSBURG, Mitchell.** Katz On Semantic Theory And 'Good'. *J Phil* 63,517-520 S 66.
- This article presents several criticisms of theses presented by Jerrold J Katz in his article "Semantic Theory and the Meaning of 'Good'." I concentrate on the claims that Katz makes about the syncategorematicity of the word "good" and the model of language possession which he claims explains this syncategorematicity. I attack his central thesis that "good" is syncategorematic on three grounds. The first of these criticizes the "dictionary entries" which a native speaker of the language supposedly internalizes/has internalized in learning/knowing the language. The second questions the plausibility of the manner of language acquisition implicit in Katz's model. It suggests that certain words providing the speaker with "function concepts" present counter-examples to the model. The last presents several anomalous sentences which, being non-cross-subcategorical according to Katz's dictionary entries, call for extensive revision of these latter.

- There seem to exist special conditions unique to those scientific explanations which employ micro-parts under which alone such explanations are considered intellectually adequate. Two attempts to specify these conditions (the "Democritean" and the "Empedoclean") have been endorsed since antiquity, but serious counter-examples exist for each one. This paper contends that only in certain circumstances may each of the traditional criteria of adequacy be regarded as acceptable, identifies these circumstances, and examines the consequences of adopting such a dualistic or contextual solution to the problem of micro-explanation.

GIRVETZ, Harry And Others. *Science, Folklore, And Philosophy.* NY Harper & Row 1966.

GIRVETZ, Harry K. *Beyond Right And Wrong.* NY Free Pr 1973.

A wide range of sources of moral skepticism and the responses to skepticism by intuitionism, prescriptivism, and instrumentalism are examined here in the process of proposing an experiential science of ethics. This ethics is developed to produce objective judgments about the attitudes and actions of a self that is capable of being transcendent and autonomous, lives in a world of testable moral authorities, and can offer defensible personal reasons for moral values and behavior based on them. A view close to those of Kant and Dewey in spirit, but one rejecting Kant's metaphysics and Dewey's reductionism.

GLANVILLE, John J. The Confrontation Of Logics. *New Scholas* 28,187-198 Ap 54.

GLASER, Abram. *This World Of Ours.* NY Philosophical Lib 1955.

This book is a popular survey of human achievement in all fields, based upon a view combining metaphysical naturalism with ethical utilitarianism.

GLASS, Bentley (ed) and Temkin, Oswei (ed) and Straus Jr, William L (ed). *Forerunners Of Darwin, 1745-1859.* Baltimore Johns Hopkins Pr 1959.

These essays commemorate the centennial of the publication of Darwin's *Origin of Species* by scholarly demonstration of the thesis that Darwin's leading ideas were themselves descended from intellectual ancestors engaged in a long struggle for survival. Six of the fifteen essays are by Arthur O Lovejoy. Bentley Glass contributes three essays, one of which is a determined effort to rescue Maupertuis from oblivion and establish him as a pioneer of genetics and evolutionism. Five other contributors deal with such precursors of Darwin as Diderot, Lamarck and von Baer.

GLASS, Bentley. *Science And Ethical Values.* Chapel Hill Univ Of N Car Pr 1965.

The author, a distinguished biologist, contends that "science is far more than a new sense organ for comprehending the real relations of natural phenomena.... It is also man's means of adjustment to nature, man's instrument for the creation of an ideal environment." From this function of science, the author derives certain "oughts"; for example, "We ought to act in such a way that what is true can be verified to be so," and "Thou shalt defend the freedom of scientific investigation and the freedom of publication of scientific opinion with thy life, if need be."

GLASS, Carolyn A and Miller, Richard I. Humanities Courses In Secondary Schools. *Educ Theor* 17,227-235 Jl 67.

GLASSEN, Peter. Moore And The Indefinability Of Good. *J Phil* 55,430-434 My 58.

Much of the criticism and discussion of Moore is based on the assumption that Moore contended that 'good' is indefinable. On the contrary, Moore admitted that 'good' is definable, although he was not interested in its definition; he argued only that good is indefinable. Thus a great deal that has been written about Moore is beside the point. At the same time it is pointed out that one cannot properly contend that good is indefinable until the definition of 'good' has been determined.

GLASSEN, Peter. Reds, Greens, And The Synthetic A Priori. *Phil Stud* 9,33-37 1958. Hilary Putnam had proposed definitions of "red" and "green" such that on those definitions the proposition "Nothing is red and green all over at the same time" would turn out to be analytic. It is shown that these definitions are not acceptable and that therefore, the status of this proposition as possibly being a synthetic necessary proposition remains unimpaired.

GLASSEN, Peter. The Classes Of Moral Terms. *Methodos* 11,223-244 nd.

Discussions of moral discourse are often confused and nebulous because of the failure to realize that there are different classes of moral terms and, correspondingly, moral judgments. A systematic examination of moral discourse reveals that there are five classes of moral terms, and a name for each of these classes is proposed. These are: (1) deontological, (2) aetiological, (3) aretological, (4) axiological, (5) dikaiological. It is suggested that a study of the interrelationships of these five classes of terms and judgements will yield important results.

GLASSEN, Peter. The Senses Of "Ought". *Phil Stud* 11,10-15 1960.

In opposition to Jason Xenakis' contention that 'ought' is univocal, there being no distinct moral and non-moral senses of that word, it is argued (1) that Xenakis' reasons for his thesis are unsound and (2) that there is positive evidence to indicate that 'ought' has indeed several senses, two of them being different moral senses. A formula for defining the different senses of 'ought' is then explained.

GLEASON, R W. *The Search For God.* NY Sheed & Ward 1964.

The author finds the modern problem of God to be centered in man's loss of the sense of God. God is rejected because he sustains or permits, and is in that measure ineffective in the face of, evil. But their various forms of humanism, scientific or atheistic, that man has substituted in his independent attempt to eradicate evil fall short because they fail to meet the challenge of man's person for which sin is a psychological as well as a theological reality. In emphasizing the need to re-establish reason's right to investigate and pronounce on the existence of God, the author

evaluates and criticizes Existentialism and the "way of the heart" approaches of Pascal and Newman, and approvingly expounds Maréchal's approach to the existence of God through the finality expressed in man's dynamic, unrestricted desire to know, an attempt to do justice to both the ontological tradition and the Kantian critique.

GLOSSOP, Ronald J. A Dilemma For Stevenson's Ethical Theory. *J Phil* 59,459-463 Ag 62.

Stevenson indicates that it takes time for a word to acquire emotive meaning while a term has a descriptive meaning the first time it is used. Emotive meaning must consequently at first be dependent on descriptive meaning even if it later becomes independent. To be complete Stevenson's analysis of 'good' should indicate the descriptive meaning the term once had which gave rise to its emotive meaning. On the other hand, if 'good' has always meant merely 'I approve', then Stevenson should explain why 'I approve' has not acquired the same emotive meaning as 'good'.

GLOWIENKA, Emerine Frances. A Brighter Side Of The New Genetics. *BioScience* 25,94-101 F 75.

Philosophically and sociologically, it is possible to appraise genetic counseling, technology, and engineering with optimism. -Even genetic engineering, which would enable scientists to alter or eliminate selected physical parts of the human body, would not prevent or obstruct personization, that is, the development of one's person. The same can be said for cyborgs, which would be greatly enlarged human brains sustained by efficient machines, mostly computers. Cyborgs would also be persons. Such genetic engineering might verify that the philosophical definition of man is not that man is a rational animal but rather that man is an incarnate spirit.

GLOWIENKA, Emerine Frances. Social Philosophy As A Synthesis Of The Social Sciences Within The Philosophy Of Nature. *Amer Cath Social Rev* 24,202-210 Fall 63.

Analyzing the distinction between philosophical and scientific methodology; plus examining the meaning of synthesis, yields a conclusion that the social sciences can be synthesized on two different levels: that of science and that of philosophy. Scientific synthesis, confined to empirically verified data, yields social and/or sociological theory. Philosophic synthesis, especially, but not exclusively of empirical data, yields a new kind of social philosophy which is a synthesis of the social sciences, yet functions as part of the philosophy of man. This, in turn, is part of the philosophy of nature, but not stable enough for a social ethics.

GOBAR, Ash. The Phenomenology Of William James. *Proc Amer Phil Soc* 114,294-309 1970.

This essay, by re-interpreting the philosophy of William James, shows: (1) that the phenomenological trend had an indigenous origin in USA, and (2) that here science and philosophy are interrelated. The main phases of Jamesian thought—the prephilosophical (1870-1885), the scientific (1885-1897), the middle (1899-1908), and the late philosophical (1909-1910)—are traced with care and precision. William James, the first great American philosopher, appears to be more than a mere pragmatist.

- Although Justices Holmes, Brandeis, and Frankfurter all opposed formalism and notions of mechanical jurisprudence and although all characterized themselves as empiricists, important differences qualify their thinking. These differences derive from the fact that each justice diagnosed something different as the locus of a pragmatic merging of fact and value. Holmes appealed to an ultimate social unity behind conflicts and relied upon an intuitive grasp of ultimate values. Brandeis sought to adjudicate conflicts with an eye to the social good. Frankfurter's extreme individualism and nominalism admitted irreconcilable conflicts which the court must deal with within bounds of tradition and precedent.

- GOHEEN, John.** *The Problem Of Matter And Form In The 'De Ente Et Essentia' Of Thomas Aquinas*. Cambridge Harvard Univ Pr 1940.
- The first two chapters of this excellent book deal with the conceptions of matter and form that were held by Avicenna and Augustine, both of whom maintained the doctrine of universal matter and, hence, of a "spiritual" matter. This view was influential in later Franciscan thought. The third chapter contains the criticism of this view and an exposition of the solution proposed by Aquinas in *De Ente Et Essentia*. The distinction between essence and existence is offered as a substitute for the distinction between matter and form, so the author claims. The book does a great deal to clarify the condensed discussion of *De Ente*, and is itself admirably clear.

- GOLDING, M P.** Causation In The Law. *J Phil* 59,85-94 F 62.
- This is a review of *Causation in the Law*, by H L A Hart and A M Honoré. The book is said to be an important contribution to legal philosophy, which succeeds in unraveling many knotty issues surrounding the application of causal concepts and the use of causal language in the law. To find the principles that guide our use of causal language and our thoughts on causal questions is its first aim. Its second aim is to examine, and to some extent dispel, the view of many legal theorists that causation in the law is "less a concept to be analyzed than a ghost to be exorcised."
- GOLDING, M P.** Principled Judicial Decision-Making. *Ethics* 73,247-254 JI 63.
- A principled judicial decision is one based on a principle that is able to withstand a certain kind of criticism. This criticism involves demonstrating that a case falls under a given principle within an entire framework of principles. A principle of decision is

- unacceptable if it leads to treating a case in a way in which, according to this framework as well as less formal sets of social values and objectives, it ought not to be treated. These factors are in a sense "the given" of judicial decision making.
- GOLDING, Martin Philip.** *Philosophy Of Law*. Englewood Cliffs NJ Prentice-Hall 1975.
- Martin Golding's "Philosophy of Law," addresses four themes: (1) The Nature of Law, its problems and nine theories which offer insight into the theoretical underpinnings; (2) The limits of law—the legislating morality dilemma; (3) Punishment, with an examination of the deterrence and the retributivist approaches; (4) dispute—settling and justice.
- GOLDINGER, Milton.** Punishment, Justice, And The Separation Of Issues. *Monist* 49,458-474 JI 65.
- This paper is a discussion of several interrelated factors that have lead to confusion in recent discussions of the moral justification of punishment. Since it is argued that the answers to various questions concerning punishment are logically related, the claim that one question can be given a utilitarian answer while another is given a retributive one is rejected. The basis of the mistaken belief that these questions are logically separate is traced to the failure to understand properly the role of the concept of justice in various theories of punishment. It is shown that the opposing concepts of justice that underlie the retributive and utilitarian positions result in definite and conflicting answers.

- GOLDMARK, Bernice.** A Myth Is A Myth Is. *Educ Theor* 16,354-365 O 66.
- Based on a philosophical assumption that man can never "know reality" other than that which he creates with his systems, it is suggested that all systems are myths expanded from basic metaphors and analog models, and that we operate with them "as if...." Education is seen as an inquiry into alternative systems—an analysis, evaluation and reconstruction of metaphors, models and myths. The criteria for evaluating alternative myth-model-metaphor constructs come from Dewey's "growth principle." The ultimate selection of basic metaphor is value judgment and, because there is a qualitative response to metaphors, judgment is an affective as well as a cognitive process.
- GOLDMARK, Bernice** and Fish, Alphoretta. Inquiry Method: Three Interpretations. *Science Teacher* 33 F 66.
- This article is a philosophic analysis of three methods of inquiry in Science Education. The methods are compared according to their directing questions and their means—methods—ends. Two theories are designed for the expansion and reconstruction of theories and methods in the subject matter (Suchman) and in teaching and learning (Strasser). The third (Fish) is designed for the expansion and reconstruction not only of substantive theories and methods but also of the methods of making judgments about theories and methods.
- GOLDMARK, Bernice.** Another Look At Inquiry. *Social Education* 29,349-357 O 65.
- Value inquiry is of particular concern in Social Studies teaching in our modern rapid changing society that seems to need a "continuous reconstruction of belief in a systematic manner." Modern programs have lost the goal of "reconstruction of belief." It is assumed that education should teach methods of judgment making that are scientific (open to public inquiry and reconstruction) and that take questions to the value level. Questions need to be asked about means—methods—ends criteria, values and assumptions of alternatives. Teachers demonstrate their democratic values by promoting open inquiry and teaching methods of reconstructing values.
- GOLDMARK, Bernice.** Critical Thinking: Deliberate Method. *Social Education* 30,329-342 My 66.
- Critical thinking is a philosophic tool that has been misused in education. It is equated with logical analysis or "scientific method," or reduced to a destructive process. Critical thinking requires analysis, evaluation to do this children need to learn to locate means—ends—methods, criteria, values and assumptions of alternative positions, and to question these and pose new ones. Examples of systematic, responsible critical thinking are given.
- GOLDMARK, Bernice.** Educating For A Pluralistic Society. *Proc National Phil Educ Soc* Volume Unknown Mr 72.
- Based on the assumption that Education in a democracy should promote the values of pluralism and open inquiry, it is claimed that professors of Education who teach future teachers to develop their own philosophy and style are violating democratic values. To promote pluralism teachers should teach children according to a variety of philosophers and methods and teach children how to analyze, evaluate, and reconstruct these alternatives for themselves. The imposition of single systems or methods on children contradicts democratic education. Future teachers should be taught how to teach children in many ways and how to teach children to inquire, make decisions and create new alternatives.

- GOLOB, Eugene O.** *The "Isms": A History And Evaluation*. NY Harper 1954.
This book aims at a clarification of several important socio-economic theories: Capitalism, Mercantilism, Socialism, and Corporatism. They are "analyzed from three standpoints, as historical developments, as bodies of doctrine, and in terms of their significance for contemporary America." In contrast to these "isms," the author presents, and discusses at some length, his own personal "moderate conservatism" or "the middle way," as history, ideology, and recommended social program.
- GOMBRICH, E H** and Hochberg, Julian and Black, Max. *Art, Perception, And Reality*. Baltimore Johns Hopkins Pr 1972.
These essays are concerned with the nature of representation in art. On the other hand, Hochberg finds such an explanation unsatisfactory and offers as an alternative an explanation based upon a theory of perception which involves "skilled sequential purposive behavior." Related to this theory is the explanation of representation in the arts as concerning canonical forms of objects and encoded visual expectancies. Max Black's concern is with the linguistic analysis of representation or depiction in painting. His conclusion is that one cannot specify a necessary condition for this phenomenon because it is a cluster or range concept. This conclusion is drawn after an analysis of the appeal to causal history, resemblance, embodied "information," and the producer's intention as necessary conditions for representation.

- GÓMEZ, Luis Martínez.** From The Names Of God To The Name Of God: Nicholas Of Cusa. *Int Phil Quart* 5,80-102 F 65.
The problem of God for medieval thinkers was not whether God existed, but how to name Him adequately and relate Him correctly to the world. Nicholas was preoccupied to find names of God that brought out both His transcendence and His immanence. The ones that satisfied him most were: 1) *Maximum-minimum*, such that God transcends all series; 2) *Possest*: a synthesis of potentiality and actuality; God is all that can be; 3) *Non aliud*: God transcends all differences and oppositions; 4) *Posse ipsum*: God is pure concentrated active power, containing all the perfection of creation before it is unfolded in multiplicity. Nicholas is strongly inspired by the Neoplatonic tradition in all this. But in Renaissance fashion, the world is not for him a springboard from which to leap away to God, but a mirror in which to find Him expressed.

- GONDIN, William Richard.** *Prefaces To Inquiry*. NY King's Crown Pr 1941.
This work maintains that epistemology, in the sense of inquiry into the nature and the norms of the inquisitive activity, is a possible and an important enterprise. In Part II of the book, Mr Gondin documents his contentions through an examination of the epistemological writings of Bacon, Descartes, and Locke. Part III of the book, in one of its two chapters, sketches briefly the history of epistemology from the time of Locke to the present day, indicating the point at which propaedeutic claims have intruded. In the last chapter, the author presents the answers he proposes to the questions listed above, and formulates what he conceives both to be and not to be the "problem of knowledge."

- GOOD, I J.** *The Estimation Of Probabilities: An Essay On Modern Bayesian Methods*. Cambridge MA MIT Pr 1965.
This monograph shows how the philosophical views of the author can be applied to concrete statistical problems concerning especially multinomial distributions and contingency tables. It makes detailed use of the notion of hierarchies of probabilities that were previously proposed by the author in his article "Rational decisions." Isaac Levi recently said that God ascends the hierarchy "until he gets tired." The use of Bayesian methods of "Type II," in which "hyperparameters" in "priors" are estimated from the data, has since gradually become an accepted Bayesian technique.
- GOOD, I J.** "Kinds Of Probability" in *Readings In Applied Statistics*, William S Peters (ed), 28-37. Princeton NJ Prentice-Hall 1969.
It is argued that there are at least five kinds of probability but that they can be estimated or measured only in terms of subjectivistic probability.
- GOOD, I J.** "Measurements Of Decisions" in *New Perspectives In Organization Research*, 391-404. NY Wiley 1964.
A quantitative explication is given for decision making. It is argued that a definition of decision can be given only in terms simultaneously of subjective probability, logical probability, and physical probability.
- GOOD, I J.** "Rationality, Evidence, And Induction In Scientific Inference" in *Machine Intelligence*, E Elcock And D Michie (eds), 171-174. NY Halstead Pr 1977.
This discussion contains some comments on complexity. For example, "If we could entirely trust our judgment of the prior probability we could throw away the ladder of complexity that may have helped us to arrive at that judgment."
- GOOD, I J.** Could A Machine Make Probability Judgements? *Computers And Automation* 8,14-16, 24-26 1959.
This paper begins with an outline of the author's theory of partially ordered subjectivistic probability. It is then argued that a general purpose computer would soon be capable of making probability judgements in a reasonable but somewhat exiguous sense by determining numerical values of parameters as for example in the evaluation functions for automatic chess playing. It is speculated that a computer containing some partially random networks might be capable of making probability judgements in a more convincing sense, partly because it would have parallel as well as serial working.
- GOOD, I J.** The Function Of Speculation In Science Exemplified By The Subassembly Theory Of Mind. *Theoria To Theory* 1,28-43 1966.
Among other things this paper draws some strong analogies between (1) speculations, (2) philosophical statements, (3) theory unbacked by experimental check, and (4) non-rigorous arguments.

GOODENOUGH, Erwin R. *An Introduction To Philo Judaeus*. New Haven Yale Univ Pr 1940.

Professor Goodenough addresses himself here primarily to the general reader, for whose benefit he summarizes the results of his extensive works. Most valuable for this purpose are his introductory chapters on method and Philo's writings where the beginner is given some sound advice in regard to the reading of Philo's works. These chapters are followed by an illuminating analysis of Philo's political ideas, his Jewish biases and his metaphysical, ethical and mystic teachings.

GOODMAN, Lenn Evan. "Razi's Myth Of The Fall Of The Soul: Its Function In His Philosophy" in *Essays On Islamic Philosophy And Science*, G Hourani (ed), 25-40. NY SUNY Pr 1975.

The five causes in Razi's philosophy, time, space, matter, God and Soul, are all necessary beings, each of which must exist and without all of which it would be impossible to account for the existence and character of the world. Razi's mythical account of their interaction is presented by him as a demonstration of the possibility of a creationist cosmology (*formatio mundi*), without which eternalism, he asserts, would be established. The order of Razi's argumentation is examined in detail with particular attention to the (Epicurean) notion of a spontaneous motion of the part of the Soul.

GOODMAN, Lenn Evan. Equality And Human Rights: The Lockean And Judaic Views. *Judaism* 25,357-362 Jl 76.

For the Hebrew prophets equality of right is a consequence of absolute worth in the human individual. The Christian notion of the Fall makes human equality a negative matter, lack of desert before divine infinitude. Hobbes, following Thucydides and the Sophists, secularizes the pessimistic view. Locke, accepting Hobbes on human nature, derives equality of right from the supposed virtual equality of individuals as aggressors. Accordingly Locke argues for limiting state authority to restraint of aggression. The more positive view of human potential Maimonides and Spinoza develop from Biblical roots contains a far richer vision of public responsibility.

GOODMAN, Lenn Evan. Ghazali's Argument From Creation. *International J Midd East Stud* 2,67-85, 168-188 Ja-Apr 71.

Part I analyzes and criticizes arguments for God's existence in Ghazali (1058-1111), showing the subordination of other arguments to the creation argument and explaining the rejection of Avicenna's contingency argument. Part II discusses Ghazali's arguments against eternalism in the *Incoherence of the Philosophers* and compares his approach with contemporary concern over verification in theology.

GOODMAN, Lenn Evan. Ibn Khaldun And Thucydides. *J Amer Orient Soc* 92,250-270 1972.

Comparison of Thucydides' history with Ibn Khaldun's *Muqaddimah* reveals profound methodological and inferential similarities. Both are naturalists, empiricists, critical historians; neither is reductionist. Both discover a law of social behavior in history, which reveals a sort of lesson of history—a qualified relativism and a cautious but by no means pessimistic historical theodicy.

GOODMAN, Lenn Evan. Saadya Gaon On The Human Condition. *Jewish Quarterly Review* 67,23-29 Jl 76.

Saadya Gaon argues on the basis of the undeserved suffering of innocents in this world that the provision of an infinite reward in the hereafter is a (morally) necessary act of God. Given divine goodness it can be known that such a reward is forthcoming. Saadya's pessimistic evaluation of this life, which figures crucially in his argument is strikingly similar to the claims of Razi, his Muslim contemporary, that evils outnumber goods in the world. Like Razi, Saadya founds his pessimism regarding life on a variety of hedonism later rejected emphatically by Maimonides.

GOODMAN, Lenn Evan. The Epicurean Ethic Of Muhammad Ibz Fakariya Ar-Razi. *Studia Islamica* 5-26 1971.

The ethical system of Muhammad Ibz Zakariya ar-Razi has been described formerly as Platonic. But careful analysis of the *Spiritual Physic* and other writings collected by Kraus reveals that Razi's ethic does not depart from the ethical axioms of Epicureanism. The ascetic coloration Razi projects onto hedonism occasions reflections as to the transparency (or neutrality) of hedonism with respect to material

issues of morality and the natural dialectic by which hedonistic ethicists absorb the moral assumptions of their peers and rivals in order to demonstrate that hedonism is no less "moral" than conventional or institutional alternatives.

GOODMAN, Nelson. *Fact, Fiction, And Forecast*. Cambridge Harvard Univ Pr 1955.

The author suggests the subtitle *An Actualist Looks at Unreality* for this book of lectures dealing with the problems of possibility, dispositional properties, confirmation theory, the validity of induction, and the nature of scientific laws. The first chapter consists of the article "The Problem of Counterfactual Conditionals" from *The Journal of Philosophy*, which is "reprinted without major changes." The three remaining chapters are made up of Special Lectures in Philosophy at the University of London, now "somewhat revised." The whole "might be thought of as consisting of first thoughts toward a far-off sequel" to the author's earlier *The Structure of Appearance* (1951).

GOODMAN, Nelson. *Languages Of Art: An Approach To A Theory Of Symbols*. Indianapolis Bobbs-Merrill 1968.

Goodman gives an account of symbols and symbolic systems, illuminating the similarities and differences among language, dance, music, painting, sculpture, et alia. The first chapter is entitled "Reality Remade" and the theme of it is that any symbolic system depends on conventions that cannot be arrived at or justified just in terms of science or "objective" reality. Chapter II discusses various forms and aspects of expression. Chapter III presents an important and original contrast between autographic arts (where fakes and forgeries are possible) and autographic arts (where they are not). In Chapter IV Goodman articulates five syntactic and semantic requirements for notational systems, and various sorts of symbolic systems are then distinguished by which combination of these requirements they satisfy, verbal systems generally violating the semantic requirements. In the final chapter Goodman brings together the results of the earlier chapters to argue the difference between science and art.

GOODMAN, Nelson. *The Structure Of Appearance*. Cambridge Harvard Univ Pr 1951.

The author applies the standards of rigor and some of the techniques supplied by modern logic to such basic philosophical problems as the theory of systems, qualities and the concrete, and order, measure and time. He studies the nature and use of the "logico-analytical" method in application to non-mathematical problems.

GOODMAN, Nelson. An Improvement In The Theory Of Simplicity. *J Sym Log* 14,228-229 Ja 50.

GOODMAN, Nelson and Bochenski, I M and Church, Alonzo. *The Problem Of Universals: A Symposium*. Notre Dame IN Notre Dame Univ Pr 1956.

The three papers brought together here were presented at the Notre Dame Aquinas Symposium, March 9-10, 1956. Alonzo Church's paper is a brief, partly historical, study of various understandings of "Propositions and Sentences." Nelson Goodman gives a well-written exposition and defense of his version of nominalism in "A World of Individuals." Father Bochenski's title essay alone is concerned with "The Problem of Universals"; this he breaks up into several levels and attempts to restate in terms of symbolic logic and with reference to the ontological commitments implied in the various positions.

GOODMAN, Nelson. The Way The World Is. *Rev Metaph* 14,48-56 S 60.

While warning against mistaking features of discourse for features of the world, the author argues that the mystic's conclusion that the world cannot be expressed is unjustified. He contends that no sense can be made of the phrase "given as"; that the photographic view of the world cannot be taken as a standard of faithfulness; and

that even the truest description does not faithfully reproduce reality. These findings do not, however, ally him with mystical absolutism: his concern is with the many ways the world is, and his response is not to fall silent but to construct one or many descriptions.

GOODMAN, Russell B. "On Speech Act Theory And Mystical Discourse" in *From Meaning To Sound*, Hassan Sharifi (ed), 15–26. Lincoln Univ Of Nebraska 1975. Speech act theory is here applied to the writing of Chinese Taoists, Ch'an Buddhists, and Wittgenstein. *Illumination* is treated as an illocutionary act; a sample analysis, following Searle, is sketched. It is noted that the speech act of illumination often involves the use of *silence*, though this does not necessarily prevent a proposition from being expressed. Discussion of the special appropriateness of silence to mystical discourse follows. The paper concludes by questioning whether illumination is a perlocutionary rather than an illocutionary act. The cases of the Tractarian ladder which is thrown away, and the Buddhist master's blows are considered.

GORDIS, Robert. *The Root And The Branch: Judaism And The Free Society*. Chicago Univ Of Chicago Pr 1962.

This volume seeks to bring "one source of wisdom and experience, the oldest living component of Western culture, the Jewish tradition," to bear upon the following question: "How are the divergences of men—religious, racial, and national—to be utilized for the enhancement of life instead of for its destruction?" It analyzes the elements of the Jewish tradition and then discusses their application to two kinds of problem areas, those which involve religion directly and those which involve religion indirectly. In a summing up, the author rejects ethical relativism, supports natural law, and highlights the Hebraic element in the origin of natural law theory.

GORDON, Robert M. "The Abortion Issue" in *The Abdication Of Philosophy*, Eugene Freeman (ed). La Salle IL Open Court 1976.

This paper concerns the moral status of the human fetus vis-à-vis the *neonate* or *post-neonate* (a being it would be *wrong* to kill for reasons comparable to those often thought to justify abortion) and the *non-human fetus* (a being it would *not* be wrong to kill for such reasons). No attempt need be made to determine what relevant differences distinguish the human fetus from the neonate or post-neonate. For it is clear that, aside from potentiality, no morally relevant differences distinguish the human from the non-human fetus. And potentiality is relevant only on grounds of utility, as analysis of the frog-prince story suggests.

GORDON, Robert M. Socratic Definitions And "Moral Neutrality". *J Phil* 61,433–449 Ag 64.

With Socratic definitions used as a test case, it is argued that the requirement of "moral neutrality" in metaethical analyses is either arbitrary or vacuous, hence never of use in resolving disputes between competing analyses. Moreover, there is no general criterion for deciding whether a usage policy universally observed by the historical speakers of a language L reflects a rule of L or an extralinguistic consensus of the historical speakers of L. One learns which uniformities in usage are linguistically required and which reflect substantive agreement only if taught by enumeration by the speakers themselves. But the speakers themselves have not been taught which of their shared policies for using the word "right," for example, are linguistically necessary and which are linguistically contingent; nor have they any need to make such a decision. Metaethical determinations of meaning are therefore baseless.

GORMAN, Cassian Patrick. Freedom In The God Of Plotinus. *New Scholas* 14,379–405 O 40.

GORMAN, Margaret. *General Semantics And Contemporary Thomism*. Lincoln NE 1962.

This book, originally a Ph D thesis, is primarily a summary, with little detailed criticism, of the views of language and reality held by Korzybski and Aquinas. There is no discussion of Carnap or of any of the contemporary philosophical analysts who deal with semantical and syntactical problems. After a brief survey the author concludes that the major deficiency in the chief theories of semantics is the neglect of the Thomistic idea of substance "as a metaphysical principle of existence and of knowledge."

GORMAN, Margaret. *The Educational Implication Of The Theory Of Meaning And Symbolism In General Semantics*. Washington DC Cath Univ Of Am Pr 1958.

The author's critique is based on the claim that in its attack on Aristotelian philosophy the movement has misrepresented the latter to itself and, hence, not touched actual Aristotelian theories. In the educational field she suggests that the problems of meaning and abstraction which general semantics rightly urges were pointed out by Aquinas, and are capable of inconsistency-free, epistemologically grounded solutions on Thomistic principles.

GOROVITZ, Samuel. Causal Judgments And Causal Explanations. *J Phil* 62,695–710 D 65.

Mill claimed there is no sound philosophical basis for selecting one member of a set of antecedent "causal conditions" as the cause of an event. Ducasse and Collingwood attempted to show the selection principled. A plausible account of the basis for selection arises out of extending Hart and Honoré's view by considering the cause to be the factor that makes the difference between what happened and what is called a "standard of comparison for causal inquiry." This "differentiating factor analysis" provides an account of the way some contextual parameters function in explanatory contexts. It also supports a theory of causal explanation that reveals why causal notions play diminishing roles as scientific disciplines progress, why explanation in terms of reasons is a species of causal explanation, and why in some contexts explanation on the Hempelian model is inappropriate, while in others it is superior.

GOROVITZ, Samuel. Leaving The Past Alone. *Phil Rev* 73,360–371 JI 64.

Gorovitz attacks Dummett's essay "Bringing About the Past" (*Philosophical Review* Volume 73, Pages 338–359). His basic point is that the asymmetry of causal relations is tied to our concepts of time, memory, physical object, etc. Since this asymmetry is logically necessary and not, as Dummett claims, merely empirically contingent, we cannot talk about bringing about the past without involving ourselves in absurdity.

GOSEN, Mary De Sales. *Philosophical Study Of The Status Of Education As A Science*. Washington DC 1960.

GOSLING, J C. Emotion And Object. *Phil Rev* 74,486–503 O 65.

Feelings called emotions seem distinguishable from sensations by having objects, and seem thereby resistant to certain analyses. The difficulty is to give any precise criterion for determining when a given feeling has an object and not just a cause or occasion. Various possibilities relying on idiom fail, and reveal differing notions of 'object' operative on our intuitions. Antony Kenny in *Action, Emotion and Will* proposes a test. Interpreted as a test which will always disclose the object of any commonly accepted emotion, it fails in cases like depression, love, cheerfulness, though an adaptation of it brings out some interesting features of feelings like fear, anger, gratitude. Within the somewhat indefinite groups of emotions and sensations there is more variation than the dichotomous picture suggests, and a more gentle and slippery slope between them. Still, the slope is worth charting, revealing a number of connections between certain feelings and various sorts of thinking.

- GOTSHALK, D W.** *Human Aims In Modern Perspective: Outlines Of A General Theory Of Value With Special References To Contemporary Social Life And Politics.* Yellow Springs OH Antioch Pr 1966.
- This volume completes Gotshalk's "trilogy on value," begun with *The Promise of Modern Life* (1958) and continued with *Patterns of Good and Evil* (1963). It is an attempt (partly descriptive) to delineate the shape of human aims as "reoriented by the modern outlook" and (partly prescriptive) to formulate a set of aims "having validity for our times." The main descriptive finding is that modern man seeks to strengthen individualism and to conquer nature. The main prescriptive conclusion, taking account of man's "present predicament," is that man should seek not only to articulate his individualism and strengthen his control over nature, but also—and more importantly—to integrate these two aims in all important fields, namely, in personal relations, in institutions in general, and in politics in particular.
- GOTSHALK, D W.** *Metaphysics In Modern Times.* Chicago Univ Of Chicago Pr 1940.
- This book presents summarily an evaluation of metaphysical syntheses since Descartes. It points to those shortcomings of the past which may be overcome by the emerging metaphysical outlook and briefly describes one version of this new theme. The method of evaluation illustrates the author's meaning of 'scientific method in metaphysics' and consists in testing a system for empirical adequacy and logical coherence.
- GOTSHALK, D W.** *Patterns Of Good And Evil.* Urbana 1963.
- Gotshalk says: "I want to depict the general situation in which human values occur, analyze its components, and discuss its fundamental patterns." He is critical of many fashionable ethical theories in contemporary Anglo-American philosophy, and his view has affinities with some of the trends in recent naturalistic value theory. He adopts a structural or relational approach, and maintains that the major value problems arise from everyday experience and the solution to those problems must be applied in that experience.
- GOTSHALK, D W.** *The Promise Of Modern Life: An Interrelational View.* Yellow Springs OH Antioch Pr 1958.
- This book suggests the relevance of the author's earlier studies of metaphysics and theory of value to contemporary issues. Specifically, the "book is a critical study of certain value assumptions of modern life." Three such assumptions or principles are examined: individuality, creativity, and interrelation or interdependence. Each principle is looked at from pragmatic (economics, politics, etc.), reflective (science, fine arts, etc.), and philosophic points of view. The first two principles furnish the clues to the first two of the three phases into which the author divides the modern period. The third principle is developed in the second half of the book. "This principle was implicit in... the original modern outlook." Its significance was earlier overshadowed by the principles of individuality and of creativity. The author suggests that the principle of interrelation or interdependence offers a basis for the resolution of contemporary tensions; tensions which are in large part products of contradictions inherent in the practical working out of the first and second principles.
- GOTSHALK, D W.** *The Structure Of Awareness: Introduction To A Situational Theory Of Truth And Knowledge.* Urbana 1969.
- This epistemological study begins with a survey of the broad domain of human knowledge. There follow two chapters on the knowing activities of observation and theory construction; four succeeding chapters treat the major components of knowledge: its materials, form, content and functions. The final chapter delineates the knowledge requirements of our social situation. Knowing is described as "a symbolizing process and knowledge as a structure of symbols." Gotshalk projects the possibility of a "second science," a value science, as responding to the needs of contemporary society.

- GÖTZ, Ignacio L.** *The Psychedelic Teacher: Drugs, Mysticism, And Schools.* Philadelphia Westminster Pr 1972.
- This book sees drugs and their use as symptomatic of a human need thwarted: the need for integrative, religious, even mystical experiences. An analysis of drug experiences against criteria of religious experiences formulated independently by various authors results in the assimilation of all such experiences, no matter how induced. The argument then turns to schools as places where such integrative experiences might be made possible, and to teachers who can "turn on" the young and create environments wherein the pursuit of awareness can be joyfully carried out.
- GÖTZ, Ignacio L.** "Marxist Alienation And The College Student" in *Philosophers Speak Of Alienation In Education*, Robert L Leight (ed), 103–125. Danville IL 1974.
- This article seeks to draw a parallel between the general capitalistic structure of society at large and the grading structure of the university. The parallel builds on an analogy between money and grades as the main alienating factors, and the alienation that ensues is discussed in terms of product, process, and species-life. A suggestion is made that the root of campus disturbances may be found in the alienating structures of the university itself.
- GÖTZ, Ignacio L.** Creativity And Conformity. *Educ Theor* 18,262–271 Sum 68.
- GÖTZ, Ignacio L.** Inalienable Education. *Journal Of Negro Education* 39,278–288 Fall 70.
- This article examines the notion that education is inalienable, and suggests that such a statement is true only if education is clearly distinguished from training and is taken in the classic sense of *paideia*. The concept that education is power is found true only if by power one means potential in the Aristotelian sense. Finally, the notion that education spells survival for Blacks is found to be true only if by education is meant the self-realization pursued in classical antiquity and in the philosophical and literary tradition of the West.
- GÖTZ, Ignacio L.** Play In The Classroom: Blessing Or Curse? *Educational Forum* 41,329–334 Mr 77.
- The article seeks to show how play can be easily and imperceptibly changed into work by giving it work characteristics. Then, once this conversion takes place, the incidence of play diminishes, and with this loss go other qualities that would normally be concomitants of play. The hypothesis is supported through empirical as well as general arguments.

- GOULD, John.** *The Development Of Plato's Ethics.* NY Cambridge Univ Pr 1955.
- This book is an attempt to account for the shift in Plato's ethical views from the Socratic ideal of personal decision in the early Dialogues to the institutionalized morality of the *Laws*. The author's interpretations are fresh and illuminating, and his central thesis—that the shift in Plato's view is a function of a growing attention to the conditions, social and natural, imposed upon moral man by the actual world—is well-supported. One of the features of Mr Gould's work is his attempt to recover something like the original senses of crucial Platonic terms. He is able to make much better sense of the Socratic "virtue is knowledge."
- GOULD, Josiah B.** *The Philosophy Of Chrysippus.* Albany NY SUNY Pr 1970.
- This study relies primarily on the fragmentary remains of the philosopher and a critical assessment of the summaries of his views found in ancient sources. The first

three chapters deal with Chrysippus' life and reputation, extending the discussion to a careful re-examination of modern authorities on Chrysippus' position in the Stoa and also to a treatment of the context of early Hellenistic thought and how its dominant themes relate to the development of Stoicism. The major portion of the book is given to restating Chrysippus' theories in each of the standard divisions of philosophy: logic, natural philosophy, and moral philosophy. The author underscores four chief notions in Chrysippus' natural philosophy: monism, nominalism, providentialism and psychological monism. He makes a good case for the thesis that Chrysippus had no systematic teaching about the categories either of being or of terms.

GOULD, Samuel B. *Knowledge Is Not Enough*. Yellow Springs OH Antioch Pr 1959.

GOULDNER, Alvin W. *Enter Plato: Classical Greece And The Origins Of Social Theory*. NY Basic Books 1965.

This book is primarily an attempt to present an analysis of the social structure and culture of ancient Greece from the viewpoints of modern sociology and social psychology. A major portion of the discussion is given to the task of setting Plato's social theory in what the author understands to have been its total sociological and intellectual context. The result is that Plato is viewed not so much as a philosopher as he is scrutinized as the social scientist whose experience as an aristocrat in a slave-holding society predisposed him to an authoritarian view of reason and an authoritarian social theory. When the author turns to "the social origins of Plato's metaphysics," he discerns there its most distinctive feature to have been Plato's insistence upon nature as a realm of inherent disorder, a property it shared with the class of slaves. The exploration of the suggestion that this master-slave model operates at the basis of Plato's diverse theories, particularly his social views, makes up the major part of the discussion.

GOULDNER, Alvin Ward. *The Dialectic Of Ideology And Technology: The Origins, Grammar, And Future Of Ideology*. NY Seabury Pr 1976.

Part I explores the concept of ideology in historical development with printing, journalism, the public, industry, social science, marxism, "elaborative" versus "restricted" speech. Through the creation of "news" and the "public" via the communications revolution ideologies dissolve, deceptively, value-free information. A critically improvable society then must criticize media freedom for all political movements censor. Part II shows how science-based ideologies attain for the new bourgeois traditional powers. Interests as gratifications mediated through ideologies against the "group-limited" become mutually inhibitive. Contemporary ideologies fail. The ruling class supervises now, indirectly, through bureaucracies political and administrative classes.

GRABAU, Richard F. Kant's Concept Of The Thing In Itself: An Interpretation. *Rev Metaph* 16,770-779 Je 63.

The author argues that the "thing in itself" refers neither to a thing nor to a reality behind the objects of experience; rather, it refers to an aesthetic dimension of all experience of phenomenal objects. Comparing passages in the first and second editions of the *Critique of Pure Reason*, he further maintains that Kant arrived at a conception of the thing in itself more functional than substantial. Finally, submitting that the thing in itself is roughly equivalent to what some recent philosophers mean by Being itself, the author compares Kant's doctrine to the Husserlian notions of aspect and life-world.

GRAJEWSKI, Maurice J. *The Formal Distinction Of Duns Scotus: A Study In Metaphysics*. Washington DC Catholic Univ Pr 1944.

This dissertation has the merit of seeking to understand the Scottish formal distinction in terms of the philosophy of Duns Scotus, without reduction to Thomism. The discussion, which moves wholly within the context and terminology of scholastic tradition, suffers from absence of any attempt to exhibit the more fundamental principles underlying Scotus' doctrinal formulations. It is, however, a useful contribution to the inadequate library of American studies of Scotist thought.

GRAM, M S. Realism And Necessity Reconsidered. *Rev Metaph* 19,565-577 Mr 66. Repositions and to evaluate the critical points advanced by Ronald Yager in his 1965 article, "Realism and Necessity." Jager argues that Veatch's theory is founded on a confusion of truth with necessity and that textual ambiguities suggest apparent contradictions. The author denies the validity and the relevance of Jager's objections, however, and, on the basis of his own interpretation, maintains that the major weakness of Veatch's position is his failure to offer a criterion for distinguishing an accidental from a necessary connection in things.

GRAM, M S. Realism And Necessity Reconsidered. *Rev Metaph* 19,565-577 Mr 66. The author's purpose is to examine Henry Veatch's theory of necessary propositions and to evaluate the critical points advanced by Ronald Yager in his 1965 article, "Realism and Necessity." Jager argues that Veatch's theory is founded on a confusion of truth with necessity and that textual ambiguities suggest apparent contradictions. The author denies the validity and the relevance of Jager's objections, however, and, on the basis of his own interpretation, maintains that the major weakness of Veatch's position is his failure to offer a criterion for distinguishing an accidental from a necessary connection in things.

GRAM, Moltke S (ed). *Kant; Disputed Questions*. Chicago Quadrangle Books 1967. This series of essays by Vaihinger, Paton, and others, concerns major questions of Kantian interpretation. Vaihinger's "patchwork" essay appears here in English.

GRAM, Moltke S (ed) and Klemke, E D (ed). *The Ontological Turn: Studies In The Philosophy Of Gustav Bergmann*. Iowa City Univ Of Iowa Pr 1974.

GRAM, Moltke S. *Kant, Ontology, And The A Priori*. Evanston IL 1968.

A primary issue in dealing with Kant's metaphysics of experience is that of what status a synthetic *a priori* proposition actually has. Gram here proposes to illuminate this by developing various elements which he takes to be implicit in what Kant does in the *Kritik der Reinen Vernunft*, rather than what Kant says he is doing there, into an

- account of such propositions. He then applies this account to an elucidation of the categories and their schematization.

- GRANT, A Cameron.** Combe On Phrenology And Free Will: A Note On Nineteenth-Century Secularism. *J Hist Ideas* 26,141–147 Ja–Mr 65.
This is a study of the work of George Combe. The author believes that in the Nineteenth century, disillusion with religion caused many secular theories to be advanced; many of these have faded into obscurity. He claims that by studying one of these, that of Combe, we can glimpse the heart of the religion vs. secularism controversy. The author examines Combe's arguments for phrenology, particularly its rejection of free will. The author concludes that as phrenology gained more popular interest, its philosophical underpinnings were lost; it became a "practical" science, rather than a response to religious perspectives.

- GRAU, Joseph A.** *Morality And The Human Future In The Thought Of Teilhard De Chardin: A Critical Study*. Rutherford NJ 1976.
Basic to this book is the distinction between revealed religion and natural religion. A development takes place whereby the initial vitality of the revelational form of culture is gradually replaced by a compensatory expression at once secular and naturalistic. When the effected crisis succeeds in depriving morality of its original foundation, a cultural predicament ensues. The author tests his theory of "the complimentary nature of divine revelation and human thought" against the historical setting of the Zoroastrian and Greek outlooks. Zoroastrianism "might be considered the classic of revealed religion," and Greek thought is called "the classic of man's intellectual endeavors." The author's survey of the edifice of Greek thought from the Milesians to Plato is designed to show how it most probably could not have been erected without the challenge of the Zoroastrian world-view. The book maintains that "all revealed religions pursue the same basic cultural values, and serve the same perennial culture."

- GRAVES, John C.** *The Conceptual Foundations Of Contemporary Relativity Theory*. Cambridge MA MIT Pr 1971.
The author first discusses his philosophical viewpoint, termed "hypothetical scientific realism." Models in science are discussed as "ontological hypotheses" which represent the concepts and laws of the theory as features of a single underlying reality. Plato and Descartes are shown as equating space and matter, while Newton kept them separate. The author then discusses General Relativity Theory, showing its ontological implications by an analysis of its mathematical and conceptual details. The priority of the concept of 'field', the geometrizing of physics, the interdependence of parts of the field due to the use of non-linear equations and other aspects of General Relativity are covered. Finally, the author discusses Post Einstein Geometrodynamics, i.e., General Relativity after 1955, showing how it solved many of the problems posed by the earlier Relativity Theory. The essential temporality in the theory, the "Wormhole" model for singularities and charges, and other technical aspects of Geometrodynamics are discussed with a view to bringing out the conceptual foundations of the theory.

- GRAY, Wallace** and Robinson, Forrest. Kindly Let Her Die. *Christian Advocate* Volume Unknown 22 Ag 68.
In this case study of a terminal patient, the reflective and counseling processes by which the decision was reached to allow her to die are described. At the end of the study, the four conditions met by this decision are set forth and recommended, where applicable, for similar cases. The approach is ethical and informal rather than legalistic or juridical.
- GRAY, Wallace.** Freedom And Determinism As Concomitants. *Phil Res Anal* 5 Sum 75.
This essay is a response to a section of Harold Hatt's *Cybernetics and the Image of Man*. Hatt contends that freedom and determinism are concomitant rather than contradictory. Gray explores the Hatt thesis from two perspectives, which he calls "language relativism" and "value-construction." He concludes by drawing the two together in focus on the expression "I am determined" as a possible synthesis of the two perspectives, illuminating both Hatt's application of "undetermined" to the lowly sponge and Gray's "free but determined" to the reformed alcoholic.
- GRAY, Wallace.** Mu And Pneuma, A Projective Comparison Of Kitaro Nishida And Nels Ferré. *Asian Profile* 1 Ag 73.
Critical comparisons are made between the Zen Buddhist concept of *mu* (nothingness) and the Christian category of *pneuma* (spirit). The thinking of Nels Ferré and Kitaro Nishida is used to give flesh and bones to the comparison as well as impetus to the constructive or "projective" movement of Gray's research. The main substance of "Mu and Pneuma" is indicated by its two section-headings: "A View of Nishida from America" and "A View of Nels Ferré from Japan (a time-lapse survey by decades)."
- GRAY, Wallace.** Philosophy In Global Perspective. *Phil Res Anal* 5,6–10 Sum 74.
Using four approaches, that of John Plott, that of Kitarō Nishida, that of an alienated Japanese radical and his own, the author shows alternative and, to some extent, complementary methods by which philosophy can come of age in a more global setting. The article is unusual in that its author, usually an existentially-chastened idealist and theist, shows his face as a dweller in the boundary territory between the life sciences and value philosophy.
- GRAY, Wallace.** Set Union In A Rain Barrel. *Phil Res Anal* 5 Fall 75.
Does the symbol "U" in the logical formulas which are interpreted (1) "A union B is empty" and (2) "A union B has a member" contain an ambiguity? Since the usual way of expressing (1) in English is "A and B are empty," while (2) can be read "A or B is empty," an ambiguity seems to exist. By means of DeMorgan's law and some concrete examples the author shows that no ambiguity exists. The printed form of the article contains a few typographical errors in its logical formulas.
- GRAY, Wallace.** The Shock Of The Universal. *Asian Profile* 2 Ap 74.
This was the second of a two-part series comparing *mu* and *pneuma*. The article begins with exposition of *The Universal Word* by Nels Ferré. Kitaro Nishida of Japan provides the Zen Buddhist contrast with Ferré's Christian thought. Representative titles and subtitles indicate some of the suggestions, conclusions and questions of the study: "Toward an Einsteinian Synthesis of East and West: The Buddha as Space and the Christ as Time," "Toward a Philosophy of Light," "Time and Evil," "Logic or Non-Logic," "Love" and "An Ethic of Mu and a Sociology of Pneuma."
- GRAY, William (ed)** and Rizzo, Nicholas D (ed). *Unity Through Diversity, I–ii: A Festschrift For Ludwig Von Bertalanffy*. NY Gordon & Breach 1973.
This book contains 55 selections divided into four sections: I: Ludwig von Bertalanffy: Person and Work; II: General and Open Systems; III: Growth and Malignant Growth; IV: General System Theory in the Behavior Sciences: Toward a New Image of Man. Most of the selections are devoted to exploring the wide ranging implications of Bertalanffy's general systems approach.

GREAN, Stanley. *Shaftesbury's Philosophy Of Religion And Ethics.* Athens Ohio Univ Pr 1967.

Shaftesbury's philosophy played a major role in the intellectual transition from the 17th to the 18th century. In this study an attempt is made to interpret Shaftesbury's complex religious and moral ideas as a unity. An opponent of rationalism, mechanistic materialism, and traditional theism, Shaftesbury employed a skeptical method to clear the way for a reformulation of faith as a vision of Nature as a rational and harmonious Whole. This vision is grounded on enthusiasm that movement of the human spirit in which reason and the affections unite to attain a higher realization of being. Enthusiasm for the good, the true, and the beautiful is the ultimate source of man's moral and religious life.

GREAN, Stanley. Self-Interest And Public Interest In Shaftesbury's Philosophy. *J Hist Phil* 2,37-46 Ap 64.

A major concern of Shaftesbury was the problem of self-interest versus public interest. Shaftesbury argued against the reduction of human behavior to self-interest. His theory of human affections provided a place both for the social affections directed toward the general good and the "self-affections" directed toward self-interest. The goal is an appropriate balance of these affections. True self-love is consonant with concern for the general welfare. The virtuous man sees himself as part of wider systems of being in which his self-interest is necessarily involved with the interests of larger systems. Shaftesbury's solution of the problem rests ultimately on his vision of nature as a rational coherent whole.

GREENBERG, Sidney. *The Infinite In Giordano Bruno: With A Translation Of His Dialogue: Concerning The Cause, Principle And One.* NY King's Crown Pr 1950.

The author provides an excellent account of Bruno's thought as expressed in some of his writings and an analysis and exposition of the thought of Bruno with regard to the problem of the infinite. The first part of the book traces the history of the problem of infinity up to Bruno's time. The views of Aristotle, Plotinus and Cusa as well as the medieval conception of the infinite are presented. Then Bruno's views are discussed by means of a direct commentary and analysis of *De l'infinito, universo e mondi*.

GREENE, Alice Borchard. *The Philosophy Of Silence.* NY Smith 1940.

Though this book ends by becoming a textbook on how to tap "tremendous powers" of the first magnitude through the technique of silence, it remains distinctly above the level of devotional and cultish literature.

GREENE, Murray. Aristotle's Circular Movement As A Logos Doctrine. *Rev Metaph* 19,115-132 S 65.

Parmenides demanded that genesis be explained without contradiction, and Zeno additionally ruled out the logical admissibility of infinite regress. The author argues that in an effort to reconcile ontological, logical, and ethical concerns Aristotle responded with the concept of circular movement, the return of substance upon itself. This concept is thus analogous to Hegel's good infinity. Aristotle used circular movement to explain the cosmos as an intelligible moving order. He also employed it in his notion of ethical life: Virtuous action is a return upon self in the sense of an actualization of the essence of man within the individual.

GREENE, Robert A. Henry More And Robert Boyle: On The Spirit Of Nature. *J Hist Ideas* 23,451-474 O-D 62.

GREENE, Theodore M. *Our Cultural Heritage.* Houston Elsevier Pr 1957.

The author formulates ten affirmations which he believes to be basic beliefs in the American cultural heritage and which are being challenged today by "an enemy in the abstract, abroad, and in our midst." Among these principles are: popular self-government, legal processes, individual initiative tempered by social justice, creative pioneering, freedom of thought, world-wide affiliations and global responsibilities. In view of the diversity in the cultural heritage (Greek, Hebraic-Christian, scientific, and democratic) these principles admit of a diversity of interpretations, but the author believes that they nevertheless constitute a basic unity of "cultural ramparts."

GREENE, Theodore M. *Religious Perspectives Of College Teaching In Philosophy.* New Haven CT Hazen 1950.

GREENE, Theodore M. *The Arts And The Art Of Criticism.* Princeton NJ Princeton Univ Pr 1940.

The present book contains three hundred half and full page photographs of paintings, sculptures, architectural works and dance groups arranged in a manner to illustrate the author's theories and analyses. But it also abounds in charts setting forth classifications of the forms, subject-matter, and methods of the arts. The most basic of these classifications are summed up in what amounts to a five page chart. All works of art are divided according to their matter, form, and content. The arts in turn are classified as: abstract arts (music, dance, architecture), representative arts (sculpture, painting) and symbolic art (literature). The arts are also differentiated as temporal, spatio-temporal and spatial.

GREENE, Theodore Meyer. *Liberal Education Reconsidered.* Cambridge Harvard Univ Pr 1953.

GREENE, Theodore Meyer. *Liberalism: Its Theory And Practice.* Austin Univ Of Texas Pr 1957.

"Liberalism" is here defined as open-mindedness, a sense of fair play, and commitment to ultimate objectives of freedom, social justice, and truth. It is opposed to special privilege, plunderizing, and it respects diverse opinions regarding goals, providing these are sought with a genuine concern for social welfare. Yet Greene holds that liberalism involves a specific creed concerning man's dignity and value: 1) man is an evaluator; 2) he is a free moral agent; 3) he is a finite creature able to

respond to ultimate mystery with reverence and awe. The latter part of this book is devoted to implementing liberalism through reform of five basic social institutions.

GREENE, Theodore Meyer. *Moral, Aesthetic, And Religious Insight.* New Brunswick NJ Rutgers Univ Pr 1957.

Just as scientific research presupposes Truth incompletely grasped, "so do our moral and aesthetic valuations and quests presuppose an absolute Goodness and Beauty which, in all their perfect plenitude, ever elude our complete comprehension." The realms of Truth, Beauty and Goodness each find support and confirmation in the encounter with God reasonably interpreted.

GREENE, W. C. *Moirai: Fate, Good And Evil In Greek Thought.* Cambridge Harvard Univ Pr 1944.

This is the history of an idea, or group of intimately related ideas, as its significance was developed for over a thousand years of Hellenic civilization. The idea of fate dominated many phases of poetry, theology, and philosophy from the Homeric age to the rise of Christendom, when at length fate, as it were, became wholly providential. Analogous ways of thought are, of course, to be found elsewhere. But the Greeks humanized fate to a far greater extent. Consequently it was more easily assimilated to the beliefs of Hebrew and Christian theism. The Greek mind was apt to perceive the significance of fate most clearly in the conflict of unseasonable circumstance with human character and its aspirations in art, morality, and politics. The intimate relations of *Moirai* to beliefs about right and wrong, and to notions of good and evil, receive their due emphasis in this book.

GREENHUT, Melvin L. Science, Art, And Norms In Economics. *Phil Phenomenol Res* 21,159-172 D 60.

The purpose is to establish an understanding of the scientific and art-like aspects of economics. The article inquires into the capacity of economic science to forecast future states, and most importantly, the author investigates the factors that must be considered in formulating a normative social theory. What is needed in an advance verification in dynamic and normative social theories, and not just an inductive test of consequences; rather, a test of the theories assumptions. It is concluded that economics is both a science and an art.

GREENMAN, Martin A. A Whiteheadian Analysis Of Propositions And Facts. *Phil Phenomenol Res* 13,477-486 Je 53.

The problem of the objectivity of propositions is dealt with in terms of Whitehead's theory of propositions. The problem is as follows: what is the ontological status of a proposition which is neither (1) signified by a sentence, nor (2) realized or exemplified in any actual world? Three fundamental theses are assumed: (1) that there is a realm of platonic Ideas viewed as pure possibilities or eternal objects, (2) that there is a realm of settled actuality or fact, (3) that there are real possibilities or propositions constituted by the contrast between actualities and pure possibilities.

GREENMAN, Martin A. A Whiteheadian Theory Of Meaning. *Phil Sci* 20,31-41 Ja 53.

Although Whitehead did not develop a general theory of meaning, his most systematic account of topics related to meaning is found in his discussion of 'symbolic reference'. But these discussions, however basic in terms of his theory of symbolism, constitute but a small part of the general theory of meaning implicit in the philosophy of organism, as a whole. The purpose of this paper is to show how Whitehead's theory of propositional feelings constitutes a general theory of meaning.

GREENMAN, Martin A. Existence And The Limits Of Analysis. *Phil Phenomenol Res* 15,551-557 Je 55.

The essential paradox of any 'existentialist' philosophy is that its ultimate subject-matter is precisely that about which it can say nothing. If only the abstract is intrinsically intelligible, and existence is throughout concrete, then existence is intrinsically unintelligible. There can be no philosophy of existence, as such, but merely philosophies which, insofar as they are 'existentialist', take as basic one or another concept of 'being' in terms of which they analyze concepts of existence. That no philosophy is true for the reasons stated in that philosophy is due, then, to the peculiar paradox of all analysis.

GRENE, David. Herodotus: The Historian As Dramatist. *J Phil* 58,477-487 Ag 61.

This paper explores Herodotus' view of history as the development of nations and heroes in connection, carried by the hybris-nemesis chain of action. Hybris in Herodotus, the author asserts, is a dramatic concept whose effect on the reader of Herodotus' *History* is to awaken the sense of inexorability of cause which we experience in the theater.

GRENE, M and Ravetz, J R. Leibniz's Cosmic Equation: A Reconstruction. *J Phil* 59,141-146 Mr 62.

If we want to think of the structure of Leibniz's metaphysics in terms of its mathematical foundation, it may assist us if we try to set up a modern mathematical formalism to express some of the relations he seems to have had in mind. This paper is an attempt to clarify (1) the conception of space and time as *phenomena bene fundata*, (2) the definition of a monad, and (3) the range and meaning of the pre-established harmony. Leibniz's insistence on the metaphysical importance of mathematical speculation suggests that this confessedly anachronistic procedure may nevertheless shed some light on his thought.

GRENE, Marjorie (ed). *Interpretations Of Life And Mind: Essays Around The Problem Of Reduction*. NY Humanities Pr 1971.

This is a collection of papers presented over the years 1967-70 at four meetings of the "Study Group on the Unity of Knowledge." They are: "Unity of Physical Laws and Levels of Description", by Ilya Prigogine; "Reducibility: Another Side Issue", by Marjorie Grene; "How is Mechanism Conceivable", by Charles Taylor; "The Homunculus Fallacy", by A J P Kenny; "Not every Homunculus spoils the Argument", by Amelie Rorty; "Reply to Mrs Rorty", by A J P Kenny; "Behaviour, Belief and Emotion", by A C Macintyre; "The Critique of Artificial Reason", by Hubert Dreyfus; "Tacit Knowledge and the Concept of Mind", by William T Scott; and "Tacit, Social and Hopeful", by R S Cohen. The papers are all concerned with various forms of the thesis of reducibility—of biology to physics, of minds or persons to machines or behaviour, or as interpretable in physiological terms.

GRICE, Godfrey Russell. *The Grounds Of Moral Judgement*. NY Cambridge Univ Pr 1967.

This book makes an original attempt to justify our obligations by the argument that they constitute modes of action which it would be in everybody's interest to make a contract with everybody else to pursue, provided the agreement be generally kept. But a distinction is made between obligations and ultra-obligations, the latter being obligatory not on everybody but only where a man can in view of his disposition best fulfill himself in that way. These are what used to be called acts of supererogation and it would be hard to find as full a discussion of these in any modern philosopher. The book also includes arguments, against utilitarianism, an elucidation of the notion of reasons for action in distinct from motives, and a discussion of the concepts of rights and moral goodness, to which the author's view gives an original position in his system.

GRIFFIN, John Howard and Simon, Yves. *Jacques Maritain: Homage In Words And Pictures*. Albany NY Magi Books 1974.

GRIFFITH, Coleman R. *Principles Of Systematic Psychology*. Urbana 1943.

The thesis is what the author calls "methodological behaviorism." Starting, not with the "I-see-an-object" situation and its demand for an initial analysis of the self as a special sort of datum, but rather with the more elementary and neutral "there-are-objects" situation including the items that are eventually identified as minded objects or "persons," the author proposes to call the items being examined and identified in their field of naive experience the "x-systems," their examination and identification proceeding by means of their functional relations to certain "y-systems" in their environment. In general, the items in the radically empirical

situation eventually divide into three kinds under such treatment: physical, vital, and mental.

GRIFFITH, Richard M (ed) and Straus, Erwin W (ed). *Phenomenology Of Will And Action*. Pittsburgh Duquesne Univ Pr 1967.

Paul Ricoeur outlines the contributions of the phenomenology of will, of intentional consciousness, and of immediate awareness as the result of repression and introjection. Ernst Joki examines the specificity of the acquisition of skills in both physiological and phenomenological perspectives. Norman Geschwind concludes from a study of "apraxias" that failure to comply with verbal commands directly contradicts philosophical and scientific notions of the unity of consciousness. Erwin W Straus sees "anosognias," cases in which paralyzes on the left side are ignored by patients who are fully conscious. Adrian van Kaam studies the additive mode of existence in contrast to laboring and playful modes. Russell R Monroe interprets the compulsive personality as an attempt to exorcise the complexity and mystery of Being. Joseph Lyons situates the fanatic at one border of the intersubjective realm, the sadist at another. Maurice Natanson discusses "Man as an Actor" and Richard M Griffith analyses "Simulation and Dissimulation."

GRIMALDI, Alfonsina Albini. *The Universal Humanity Of Giambattista Vico*. NY Vanni 1958.

Two theses are set forth in this volume: 1) that Vico developed a theory of human nature and of history that is relevant to current social problems and 2) that Vico's philosophic principles and method display marked kinship to the pragmatism of John Dewey. These contentions are developed in a general statement of Vico's theories of history and of knowledge, with particular reference to Vico's time and to the philosophies that influenced his work, and in examinations of his major works. Vico's conjoining rational and empirical methods, his genetic approach to language as a basis for epistemology, and his use of law in the development of theories of man are paralleled with aspects of Dewey's thought. There is an Appendix of Latin References and a Bibliography included in the book.

GRIMM, Robert H (ed) and Care, Norman S (ed). *Perception And Personal Identity*. Cleveland 1969.

GRIMM, Robert H (ed) and Mackay, Alfred F (ed). *Society: Revolution And Reform*. Cleveland OH 1971.

The volume includes four symposia each consisting of a principle paper and commentary. In Symposium I, "Moral Progress," Jerome Schneewind argues that moral progress may take place either through gradual reform procedures or abruptly through revolution. In Symposium II, Arnold S Kaufman argues that no special feature of democracy exempts it as a government form from the legitimate use of violence. In Symposium III, Ronald M Dworkin outlines a new theory of law dependent on moral imperatives. In Symposium IV, David Braybrooke discusses "Revolution Intelligible or Unintelligible."

GRISEZ, Germain. *Beyond The New Theism: A Philosophy Of Religion.* Notre Dame Notre Dame Univ Pr 1975.

Following a three chapter introduction on Faith and Reason, the author presents, in two chapters, a cosmological argument for the existence of an Uncaused Entity. Eight chapters of Criticism of Alternatives follow. Three four-chapters parts on The Meaningfulness of God-Talk, Existential Objections to God, and The Meaningfulness of Christian Beliefs conclude the work.

GRISEZ, Germain. A Tentative Problematic For A Philosophy Of The Social Sciences. *Thomist* 25,537–554 O 62.

GRISEZ, Germain and Tollefsen, Olaf and Boyle, Joseph M. *Free Choice: A Self-Referential Argument.* Notre Dame Notre Dame Univ Pr 1976.

The question—does man have freedom of the will? The authors of this book agree that this may be true. In a remarkably detailed way, the authors devote entire chapters to examining the various arguments that have been advanced, historically, to show that there are, sometimes, free choices. Other chapters are devoted to historical arguments that there are no free choices, and the arguments that "free choice" and "no free choice" are compatible. The authors are convinced that the two positions are not compatible. The authors finally argue that sometimes people do make free choices.

GRISEZ, Germain. Can Unconscious Factors Influence Every Judgment? *Proc Cath Phil Ass* 35,109–116 1961.

GROB, Alan. *The Philosophic Mind: A Study Of Wordsworth's Poetry And Thought, 1797–1805.* Columbus Ohio State Univ 1972.

Examining Arthur Beatty's claim that Wordsworth is an associationist in the tradition of David Hartley, the author explains in what sense this is true of the Wordsworth of 1797–1800, the Wordsworth of *Tintern Abbey* and every other work of substance during this period. In five revealing chapters the author shows how this empirical phase of the poet manifests a well-defined empiricist theory of mind, nature and morals. With Wordsworth Locke's empiricism has become more radically sensationalistic, altered but not transcendentalized, and it is put into an attractive rapport with a broader theory of value and a wider human context.

GROSS, Leonard. *God And Freud.* NY McKay 1959.

GROSS, Llewellyn (ed). *Symposium On Sociological Theory.* Evanston IL Row Peterson 1959.

This symposium was organized to help realize the following objectives: 1) to reconstruct, co-ordinate, and integrate existing contributions to sociological theory; 2) to produce original systems of analysis where needed; 3) to further theoretical work by the use of logical techniques; 4) to examine critically the structural-functional theory so common today in sociology; 5) to establish the relevance of theory to empirical work, and to show that individual theories must be considered in terms of a wider analytical framework. To this end philosophers, sociologists, and psychologists have contributed essays on a wide range of subjects: Social Types; Social Order; Social Change; Functional Theory; Models in Social Science; Formalization of Theory; Values and Theory Construction; Sociology of Knowledge.

GROSS, Mason W. Whitehead's Answer To Hume. *J Phil* 38,95–102 F 41.

GROSS, Rebecca H. *Voltaire: Nonconformist.* NY Philosophical Lib 1965.

Voltaire epitomizes pre-revolutionary France at its intellectual best. He may also be thought of as the dentist who pulled the teeth of the *ancien régime* a life which had the libertine Abbé Chaulieu as one master and Bolingbroke, the intellectual master of Locke, as the other. Bayle was his greatest teacher in skepticism and Fontenelle in popularization. Voltaire represents the best of the bourgeois spirit: burlesque, satire, cynicism, realism, and propagandistic methods revealed in a hatred of supernatural mystery, dogma, social parasitism, abstract system, professional jargon, other worldliness, fatalism, and contemplativeness. He proved an inflexible non-conformist against the pretensions of both Church and State.

GROSSMAN, Morris. A Glimpse Of Some Unpublished Santayana Manuscripts. *J Phil* 61,61–69 Ja 64.

The unpublished manuscripts of Santayana are valuable not only in showing us successive refinements of his prose but also in tracing the development and refinement of his philosophical concepts. This paper reviews some particular unpublished manuscripts from the Santayana collection, in the Columbia University Library, commenting upon their themes as well as the degree of their finish and organization.

GROSSMANN, Reinhardt Siegbert. *Reflections On Frege's Philosophy.* Evanston IL 1969.

GROSSMANN, Reinhardt. *Ontological Reduction.* Bloomington Indiana Univ Pr 1973.

In answer to the question "How does one go about showing that a given ontological kind can be reduced to another?" grossmann answers that "most kinds of definitions have no reductive power whatsoever." In the introduction, he argues that numbers are perceived by the senses, all mental acts are propositional, sensible entities need not be particular, and molecular facts are not reducible to atomic facts. Part One

treats of definitions, identities and equivalences, existence and quantification, necessity and possibility. In Part Two, Grossmann tries to unravel a number of logical and semantical paradoxes, maintaining that properties should be distinguished from classes and sets. In Part Three, he distinguishes various kinds of wholes and parts, arguing that ontological analysis should be distinguished from spatial division.

GROSSMANN, Reinhardt. *Reflections On Frege's Philosophy.* Evanston IL 1969.

This book presents a detailed analysis of selected ontological problems in Frege's philosophy. The author begins with a discussion of the *Begriffsschrift* where it is claimed that the origins of the main themes in Frege's philosophy are contained. The second chapter examines the *Grundlagen* where the first two problems are resolved by securing the distinctions between (a) objective and subjective entities and (b) objects and concepts. The third chapter discusses "Sense and Reference" where Frege presents a solution to the problem of identity which in turn yields a solution to the problem of truth. The last chapter concerns, briefly, later thoughts on these matters.

GROSSMANN, Reinhardt. *The Structure Of Mind.* Madison 1965.

This volume is a study of certain problems associated with the structure of mind from the standpoint of Gustav Bergmann's metaphysics. grossmann concentrates upon the dispute between realism and idealism, dealing only with those aspects of the philosophy of mind which bear upon it. A major element in Grossmann's position is his development, following Bergmann, of intentionality. The book is useful for its comments on and discussions of earlier views of intentionality, notably those of F Brentano, A Meinong, and G Frege. It includes and uses extensively the technical machinery of Bergmann's "Iowa school" of metaphysics. Those who are familiar with this approach will find many well-known arguments and some new developments.

GROSSMANN, Reinhardt. Conceptualism. *Rev Metaph* 14,243–254 D 60.

After comparing the realist and nominalist positions, the author defines conceptualism as the theory that perception can deliver only the particular: it is thought that presents us with the general. He then discusses the conceptualist views that predication involves concepts rather than properties and that the former alone can account for communication and knowledge. The author then argues for the realist position that perception is propositional; the conceptualist's fundamental dualism of thought and perception is avoidable, for there is no need to speak of the "mind's eye."

GRUENDER, David. Wittgenstein On Explanation And Description. *J Phil* 59,523–530 S 62.

According to Wittgenstein, philosophy is nonsense but nonsense that we can exercise only by becoming very clear about what we are doing. In attempting, in the *Investigations*, to illustrate how we may become clear about a particular piece of nonsense, Wittgenstein distinguishes between two kinds of clarification: explanation and description. We are told unequivocally that philosophy ought to describe, but never explain. This paper first tries to explain why Wittgenstein held this view and then assesses its merits by explaining the consequences of applying it to a particular philosophical problem that Wittgenstein has chosen as an illustration of its effectiveness.

- GRÜNBAUM, Adolf** and Nagel, Ernest and Bromberger, Sylvain. *Observation And Theory In Science.* Baltimore Johns Hopkins Pr 1971. This book contains three lectures: Nagel, "Theory and Observation," Bromberger, "Science and the Forms of Ignorance," and Grünbaum, "Can we ascertain the Falsity of a Scientific Hypothesis?" Nagel's essay is concerned with refuting some of the specific objections recently raised against the observation-theoretical distinction and its philosophical relevance. He argues that the thesis that observation terms are theory laden is compatible with the above distinction, as well as rejecting the charge that the theory laden character of observation terms prevents theories from being put to a fair test. Bromberger's paper takes issue with the Hempelian account of the structure of scientific theories and scientific explanations. He urges an alternative model based on the 'logic of questions' which is claimed to avoid some of the conceptual difficulties of the Hempelian position as well as more adequately reflecting actual scientific practice.

- GRÜNBAUM, Adolf.** Is A Universal Nocturnal Expansion Falsifiable Or Physically Vacuous? *Phil Stud* 15,71-78 1964. The article goes into G Schlesinger's argument that the statement "Overnight everything has doubled in size" can be falsified. The author states that Schlesinger takes insufficient cognizance of two relevant facts: (1) the hypothesis of nocturnal doubling can be construed in several different ways, and (2) the change of non-falsifiability has been leveled against the nocturnal doubling hypothesis on a number of quite distinct grounds. The author construes the hypothesis as being predicated on the Newtonian conception of spatial and temporal congruence and argues that on this interpretation the hypothesis is not falsifiable.

- GRÜNBAUM, Adolf.** The Relevance Of Philosophy To The History Of The Special Theory Of Relativity. *J Phil* 59,561-573 O 62. The aim of this paper is to give a concrete demonstration of the far-reaching relevance of the philosopher of science to two of the major concerns of the historian of science: (1) the very posing of well-conceived, searching historical questions, and (2) the avoidance of serious historical blunders of a kind committed by those lacking the requisite philosophical mastery. Specifically, the problem used is that of unraveling the history of the special theory of relativity to show that no correct account of the genesis of that theory can be furnished without a rigorous prior comprehension of the philosophical conceptions underlying it and distinguishing it from its ancestors.
- GRÜNBAUM, Adolf.** The Structure Of Science. *Phil Sci* 29,294-305 Jl 62.
- GRÜNBAUM, Adolf.** Whitehead's Philosophy Of Science. *Phil Rev* 71,218-229 Ap 62. Grünbaum reviews Whitehead's *Philosophy of Science* by Robert Palter. He agrees with Palter that the key to understanding Whitehead's philosophy of science is Whitehead's attempt to reinterpret Einstein's theory of relativity in terms of his own natural philosophy. But he criticizes Palter's defense of Whitehead for its mistakes in explaining Einstein's special theory of relativity. He also attacks Whitehead himself for his ascription of an intrinsic metric to space and time.

- GULLEY, Anthony D.** *The Educational Philosophy Of St Thomas Aquinas.* NY Pageant Pr 1964. This is the result of a doctoral thesis and it is an attempt to place the teacher in education as a true cause of education and not a mere indoctrinator. Treating of all the causes of education the author finds that the teacher as well as the student, is an efficient cause of education in the student. Obviously this conclusion is at variance with the views of Dewey and the progressive educationists. The author concludes that there are three efficient causes in education; God, the student and the teacher. Thus the teacher is not a mere condition or an occasion of redirecting the ideas of the student.

- GUNNELL, John G.** *Political Philosophy And Time.* Middletown CT Wesleyan Univ Pr 1968.
- GUNTER, P A Y.** White, Bergson, Freud: Suggestions Toward A Theory Of Laughter. *S J Phil* 4,55-60 Sum 66. This essay explores the theories of laughter of Alfred North Whitehead, Henri Bergson, and Sigmund Freud. Whitehead views laughter as being either life-affirming or life-denying. Bergson conceives laughter as a sort of social

- "ragging." Freud construes laughter as a saving of psychic energy, but is unable thereby to account for humor. This essay concludes with the suggestion that the "two-sidedness" of laughter noted by Whitehead is fundamental; laughter based on creative eros is one basic type, while laughter based on destructive thanatos is another. Laughter springs from an incongruous juxtaposition of "life" and "death," and may be weighted toward either.
- GUNTER, Pete A Y.** Nietzschean Laughter. *Sewanee Review* 77,493-506 Sum 68. The purpose of this essay is to show that Nietzsche's is a "comic," and not a tragic, philosophy and, subsidiarily, to explore Nietzsche's concept of laughter. Nietzsche, in his mature philosophy, describes two kinds of laughter: the laughter of the powerless, typified by crowd-laughter, and the laughter of the powerful, found in the rare individual. The theories of laughter of both Bergson and Freud are limited to the explanation of the former. It is Nietzsche's merit to have examined the latter, and to have made its affirmative power the center and justification for a world-view.
- GUNTER, Pete A Y.** Philosophy Is What? *Southern Humanities Review* 2,207-212 Spr 68. This is a response to Haywood R Shuford's essay "What is Philosophy?" Shuford argues that philosophical perplexities are merely "linguistic" and that as this is understood philosophy will disappear. Against this claim it is argued that sentences attempting to dismiss philosophy are themselves, on the skeptic's own grounds, meaningless. The terms used in the skeptic's analyses of language, moreover, are open to philosophical question. Those who predict the death of philosophy are like those who huddle on mountaintops awaiting the End of the World.
- GUNTER, Pete.** Bergson's Reflective Anti-Intellectualism. *Personalist* 47,43-60 Wint-Ja 66. This essay defends Henri Bergson against charges, levelled by Bertrand Russell, George Santayana, and others, that his is an anti-scientific, anti-intellectual philosophy. Bergson's critique of the intellect's abstractions is not understood as destructive. His intuition is understood as concentrated reflection—a reflection which is capable of nourishing the intellect. By describing intuition as leading to novel scientific conceptions (such as the infinitesimal calculus, acceleration, evolution) Bergson escapes Russell's acerbic criticisms of intuition as mere "instinct."

- GURVITCH, Georges.** *Sociology Of Law.* NY Philosophical Lib 1942. The sociology of law in its abstract theoretical phases is concerned with just this task, and Georges Gurvitch's book is designed as a contribution to this field. The book centers in an analysis of society and law in such a way that out of that analysis there is constructed a schematism of the types and modes of social and legal orders and their mutual relations. This in turn provides a framework for fruitful use of the functional conception of law in empirical investigations. Professor Gurvitch prefaces his analysis by a valuable, lengthy review of the preceding work in this field beginning with Aristotle and ending with the American legal realists.

- GURVITCH, Georges.** The Problem Of Social Law. *Ethics* 52,17-40 O 41.
- GURWITSCH, Aron.** *Field Of Consciousness.* Pittsburgh Duquesne Univ Pr 1964. This work is presented as a phenomenological study. It is divided into six parts: (1) General Problems of Organization in Consciousness, (2) Some Principles of Gestalt Theory, including a discussion of the constancy-hypothesis, the concept of Gestalt and Gestalt-coherence; (3) Some Fundamental Concepts of Constitutive Phenomenology, in particular a contrast between the psychological and the phenomenological approach to consciousness, the phenomenological reduction, and the nature of the perceptual noema; (4) Phenomenological Theory of Perception, (5) The Thematic Field, which is concerned with James' concept of "fringes," context, and the significance of "revelance," (6) Ontological Problems, involving orders of existence and Schultz' theory of finite provinces of meaning.
- GURWITSCH, Aron.** *Phenomenology And The Theory Of Science,* Lester Embree (ed). Evanston IL 1974. The two principal themes, reflected in the title, are scientific thought and perceptual experience. This volume is especially rich in its very clear and helpful account of the Husserlian view on the relationship of *Wissenschaft* and the life-world, and the relationship of these latter two to the constitutive intentionality of consciousness.
- GURWITSCH, Aron.** A Non-Egological Conception Of Consciousness. *Phil Phenomenol Res* 1,325-338 Mr 41.
- GURWITSCH, Aron.** Edmund Husserl's Conception Of Phenomenological Psychology. *Rev Metaph* 19,689-727 Je 66. In this exposition of themes central to Husserl's *Phaenomenologische Psychologie* (The Hague, 1962), the author first explains why Husserl saw a need to establish the science of psychology as a positive discipline. He then examines Husserl's understanding of "eidetic psychology" (the logic of the mind and of empirical psychology); the intersubjective "world of primordial experience" and its relation to abstract nature; the subjective origin and intersubjective reference of cultural objects; the relation between psychic life and physical embodiment; and the paradigmatic intentionality of perception. He closes with remarks on Husserl's notion of the unifying temporality of conscious life.

- GURWITSCH, Aron.** The Problem Of Existence In Constitutive Phenomenology. *J Phil* 58,625-632 O 61. After a brief sketch of the fundamental principles of phenomenology with special regard to the problem of existence, the author sets forth the terms in which ontological problems can be treated in phenomenology. He then submits that since any object we consider refers to an organized and systematized multiplicity of acts and processes of consciousness, it can be posited as existent only with the proviso that later phases of the perceptual process will be in harmony and agreement with one another and with earlier phases. Real things thus have but presumptive existence. The author also contends that the notion of existence contains a necessary and essential reference to that of order of existence.

- GUSTAFSON, Don F.** Voluntary And Involuntary. *Phil Phenomenol Res* 24,493-501 Je 64. This paper examines the uses of the words voluntary and involuntary as answers to some of the questions asked by means of "Voluntary or Involuntary?" A variation of Ryle's thesis about this question is defended. The paper contains a criticism of the view that a voluntary action is a set of movements caused by an act of volition and the view that there is a logical connection between choosing, or deciding, or intending and an act's being voluntary. I discuss "could have" in relation to the notions of ability to do something, capacity now to do something, skill in doing something, opportunity to do something, authority to do something, and right to do something. There is a short discussion of the relation between the answer to "Voluntary or Involuntary?" and the giving and receiving of excuses.

- GUSTAFSON, Gustaf J.** *The Theory Of Natural Appetency In The Philosophy Of St Thomas Aquinas.* Washington DC Catholic Univ Pr 1944. The aim of this book, as stated in the introduction, is "to provide an adequate study of the Thomistic theory of natural appetency." "such a project, however," the author says, involves "other elements than a mere exposition of the theory itself." He thus devotes his first chapter to the "foreshadowings of the theory not only in Plato and Aristotle but in the Platonic and Aristotelian currents down to the thirteenth century." A second chapter is devoted to the general context in which the theory is found, under which heading the author discusses Thomism as existential, as dynamic, and as

- teleological. The remaining two chapters consist respectively in the author's statement of the theory, and the development of several "implications" of the theory.

- GUTTCHEN, Robert S (ed)** and Bandman, Bertram (ed). *Philosophical Essays On Curriculum.* Philadelphia Lippincott 1969.
- GUTTCHEN, Robert S.** *Felix Adler.* Boston Twayne 1974.
- Guttchen's study deals almost exclusively with Adler's own thought. The two main divisions are Part I which is an exposition of his ethical theory and Part II, his general conception of education. The entire study centers on Adler's core concept "that each and every human being has worth." Part III is a brief, careful summary and evaluation in which Guttchen examines the general coherence and clarity of Adler's main ideas, and in external evaluation, the scope and significance of the problems with which Adler chose to deal.

- HACKING, Ian.** Salmon's Vindication Of Induction. *J Phil* 62,260-265 My 65.
- Hacking discusses some difficulties with Wesley Salmon's recent work on induction. He argues that Salmon's argument—his claim to rescue Reichenbach's vindication of induction—is defective for reasons much less sophisticated than those given previously. Its invalidity can be shown without doing any philosophy at all. In discussing the straight rule, convergence, linguistic invariance, and additivity, Hacking calls into question the idea set forth by recent writers—that aside from Goodman's riddles about 'grue' Salmon has at least proven that Reichenbach's straight rule for estimating long-run frequencies is preferable to any rival rule.

- HACKNEY, John.** *A History Of Greek And Roman Philosophy.* NY Philosophical Lib 1966.
- HACKSTAFF, L H.** *Systems Of Formal Logic.* NY 1966.
- Most of the book is devoted to presenting systems of propositional calculus and various restricted systems of propositional logic. The first system that the author treats is an axiomatic system without negation whose theorems are common to the other systems to be considered. The treatment of predicate (functional) calculus is brief. The author then sketches an extension which allows predicates of any number of arguments, and he discusses identity, higher order systems of predicate calculus, and Boolean algebra. Very brief accounts of paradoxes and non-standard systems of predicate logic conclude the book.

- HADAS, Moses.** *Humanism: The Greek Ideal And Its Survival.* NY Harper 1960.
- HADAS, Moses.** *Old Wine, New Bottles: A Humanist Teacher At Work.* NY Simon & Schuster 1962.
- In this study, the author pleads for a more prominent place for the humanities in the education of today. He distinguishes two ideals in the teaching of the humanities, both having their origin in ancient Greece and continuing into modern times. The knightly ideal is strictly aristocratic and aims at producing the gentleman. The scribal ideal attributes to the classics a sort of supernatural character and aims to expound their teachings in elaborate detail, frequently missing the spirit for the sake of the letter. The author traces the history of these two ideals, and finds that, with the rise of modern democratic institutions, the knightly ideal became suspect. But this ideal, the author contends, is so worthwhile that it should be democratized, that is, made the educational ideal of all segments of a democratic society.

- HADDOX, John H.** *Antonio Caso: Philosopher Of Mexico.* Austin Univ Of Texas Pr 1971.
- The Christian personalism of Antonio Caso was formed in response to the anti-religious and pro-scientific Positivism, stressing economic progress through political order, that became the official ideology of the Mexican government during the thirty-five year military dictatorship of Porfirio Diaz. For him, philosophy is an explanation of existence that cannot be achieved through scientific analysis. It involves a synthesis by the whole of man, not merely his reason, of the six different points of view from which existence can be viewed; metaphysical (eternal truths) vs. historical (temporal truths); economic (utility) vs. ethical (charity); and logical (abstract ideas) vs. aesthetic (creative intuitions). caso felt his task was to establish a hierarchy

- in which all these points of view are included, but with the ethical, aesthetic, and metaphysical predominating.

- HAEZRAHI, Pepita.** Pain And Pleasure: Some Reflections On Susan Stebbing's View That Pain And Pleasure Are Moral Values. *Phil Stud* 11,71-77 1960.
- The author attempts to point out certain fallacies he sees in the position of Susan Stebbings who holds the view that "pain is evil" is a basic ethical judgment and that the truth of other judgments, e.g., cruelty is evil, is based upon the judgment that pain is evil. The author points out that "cruelty is evil," as a moral judgment, draws its moral validity from other elements and principles than merely its relation to pain, viz., deliberate infliction of pain on a sentient being to his detriment, and, therefore, is not based upon "pain is evil."

- HAHN, Lewis E.** *A Contextualistic Theory Of Perception.* Berkeley Univ Of Calif Pr 1942.
- Mr Hahn's book is primarily a statement and amplification of the pragmatic theory of knowledge as it bears on perceptual experience. This work makes important use of the theoretical conclusions which E C Tolman draws from his experimental work in the field of animal behavior and attempts—much less successfully, in the reviewer's opinion—to utilize some of the concepts of H H Price. The results of a modification of Price's views in terms of contextualism appear strangely out of keeping with the spirit of his argument, although from this in itself it would not necessarily follow that the reconstruction has no merit.

- HALL, Everett W.** *Modern Science And Human Values: A Study In The History Of Ideas.* Princeton NJ Van Nostrand 1956.
- The Kenan Professor of Philosophy in the University of North Carolina examines at length the contrasts between medieval and modern conceptions of science, and between the advanced physical sciences and the lagging value disciplines. He selects as key developments the evolution of the laws of motion in physics and of price in economics. On the side of values he discusses mainly ethical and political theory "in a scientific age," concluding with a section on "Recent Controversy in Ethics: Evolutionism, Intuitionism, Skepticism, and Existentialism."
- HALL, Everett W.** *Our Knowledge Of Fact And Value.* Chapel Hill Univ Of N Car Pr 1961.
- This is hall's final statement of his "intentionalistic empiricism" in epistemology and ethics. He takes emotional experience to be basic; perceptions are only an abstracted portion of this experience. Truth as a property of empirical propositions, and legitimacy as a property of value propositions, are interpreted as unanalyzable relations between propositions and facts or values. The test of truth and legitimacy is coherence. The examples of emotionally expressive language found throughout the second half of this work show sensitivity to the variety in such a language.
- HALL, Everett W.** *Philosophical Systems: A Categorical Analysis.* Chicago Univ Of Chicago Pr 1960.
- A philosophical system is a system of categories, and the categories of a given system are found in the forms it allows empirical sentences to assume when properly formulated and in its own categorical assertions. The categorical commitments defining a specific system are to be found in the total resources of the language used by an adherent of that system. A philosophical system without categorical commitments is impossible, as are self-contained systems and indubitable categories available to all systems.

HALL, Everett W. Speculation On A Logical Lapse Of Kurt Baier. *Phil Stud* 11,7–9 1960.

This article goes into Kurt Baier's statement "Premises of an argument are true if the argument is valid and the conclusion true." The author attempts a psychological explanation of Baier's statement, suggesting Baier is involved in a pragmatic theory of truth such that any belief's truth is a matter of the "satisfyingness" of accepting and acting on it or any further belief implied by it.

HALL, James. Knowledge, Belief, And Transcendence: Philosophical Problems In Religion. Boston Houghton Mifflin 1975.

HALL, Jerome. *Comparative Law And Social Theory*. Baton Rouge 1963.

The author contends that the principal obstacle hindering progress in studies of comparative law, and other disciplines concerned with law, is lack of definition of subject matter.

HALL, Jerome. *Foundations Of Jurisprudence*. Indianapolis Bobbs-Merrill 1973.

HALL, Jerome. *Living Law Of Democratic Society*. Indianapolis Bobbs-Merrill 1949. Notwithstanding this call to opposing schools, Hall presents cogent criticisms of legal positivism. In fact, this work may be regarded as an arsenal of arguments against the positivist position.

HALL, Jerome. *Studies In Jurisprudence And Criminal Theory*. NY Oceana 1958.

These various studies by a champion of "integrative jurisprudence" and by the author of *General Principles of Criminal Law* (1947) are organized to constitute a comprehensive exposition of the author's philosophy of law, especially his theory of criminal procedure. Three philosophical essays appear here for the first time: "Legal Theory and Jurisprudence" (Chapter I), which describes the various currents in contemporary philosophy of law and their relations to each other; "Culture, Comparative Law and Jurisprudence" (Chapter VI), in which cultural factors are related to genuine objectivity in legal science; and "Causation" (Chapter X), in which the meaning of "cause" in criminal law is examined in connection with the general theory of causation. Noteworthy for philosophers are also the following essays: "Plato's Legal Philosophy" (Chapter III), "Authority" (Chapter V), and "Psychiatry and Criminal Responsibility" (Chapter XV).

HALL, Jerome. Analytic Philosophy And Jurisprudence. *Ethics* 77,14–28 O 66.

Analytic philosophers' theories about jurisprudence can be evaluated in a relatively objective way by testing them against the legal system itself and its methods. Criminal law theory, for example, elucidates the meaning of legal theories in a way different from and superior to the method employed by J L Austin in "A Plea for Excuses." H L A Hart's faulty criticism of the author's theory of criminal law indicates that analysis is not neutral but has metaphysical commitments resembling those of Gilbert Ryle. That analytic philosophers reach inadequate conclusions about jurisprudence tends to discredit analytic philosophical methods.

HALL, Joseph. *Heaven Upon Earth, And Characters Of Virtues And Vices*, Rudolf Kirk (ed). New Brunswick NJ Rutgers Univ Pr 1948.

HALL, Manley Palmer. *Pathways Of Philosophy*. Los Angeles Phil Research Soc 1947.

HALL, Marie Boas. *Robert Boyle On Natural Philosophy: An Essay With Selections From His Writings*. Bloomington Indiana Univ Pr 1965.

The aim of this book is to give the reader an understanding of the work and the significance of Robert Boyle. This understanding includes both the scientific and (what we today consider) the philosophical aspects of his work, but the emphasis is placed more strongly on the scientific aspects. One-third of the book is taken up by Hall's account of Boyle's life. The scientific and philosophical backgrounds against which Boyle worked are sketched, and it is made clear in what respects Boyle was original. The remainder of the book consists of selections from Boyle's writings.

HALL, Thor. "Nygren's Ethics" in *The Philosophy And Theology Of Anders Nygren*, Charles W Kegley (ed), 263–281. Carbondale S Illinois Univ Pr 1970.

This chapter represents a detailed analysis of Anders Nygren's philosophical ethics. It includes explications of Nygren's neo-critical philosophical stance, his theory of knowledge, his analyses of categories of experience, his theory of meaning (autonomous contexts of meaning), and his definition of the ethical category (the ethical *a priori*). Critical evaluations are included, and the limitations of Nygren's approach—especially the lack of a formal analysis of the ethical *a priori*—are pointed out. The essay does not include detailed explications of Nygren's more specific studies of Christian ethics (the ethics of love).

HALL, Thor. Theodicy As A Test Of The Reasonableness Of Theology. *Religion In Life* 43,204–217 Sum 74.

The article tests a number of approaches to theodicy to see whether they measure up to the criterion of "reasonableness", i.e., whether they take seriously the two factors which together constitute the problem of theodicy: the puzzling realities of human suffering and the central affirmations of faith (in this case the Christian affirmations concerning God). Any weakness on either side—any attempt to solve the problem by modifying known existential reality or by compromising given confessional emphases—results in an unsatisfactory theodicy; any stark irrationality or unresolved paradoxality left in the relationship between reality and faith shows only that the theologian has not been able to integrate the two poles in such a way as to make sense or be reasonable.

HALLETT, Garth. *Wittgenstein's Definition Of Meaning As Use*. NY Fordham Univ Pr 1967.

The author has primarily devoted himself to two tasks: tracing the history of the "definition" in Wittgenstein's writings, and giving brief consideration to a great variety of criticisms either of the "definition" itself or of Wittgenstein's philosophical enterprise as a whole. The first four chapters are given over to the scholarly task, and the fifth and last to the critical task. The author does not show much interest in the great variety of philosophical issues that surround the *Tractatus*, the *Investigations*, and the commenting literature. Nor is there to be found much in the way of explication of Wittgenstein's turgid prose.

HALLETT, H F. On A Reputed Equivoque In The Philosophy Of Spinoza. *Rev Metaph* 3,189–212 D 49.

HALLIDAY, Richard John. *John Stuart Mill*. NY Barnes & Noble 1976.

Halliday's study is primarily textual and autobiographical, and seeks to present Mill as a political eclectic inclined toward a cautious and uncertain pessimism, but striving for a general consensus to a youthful mental crisis. The topics of eclecticism and romanticism are treated in the first two chapters. The next two chapters are devoted to an account of how Mill's attachment to liberal *laissez-faire* principles could be consistent with a sympathy on his part for certain kinds of socialism, as well as with the general structure and content of *On Liberty*. The two concluding chapters deal with liberty, individuality, and Mill's ambivalent attitude toward democracy.

HALLIE, P P. *Maine De Biran: Reformer Of Empiricism, 1766–1824*. Cambridge Harvard Univ Pr 1959.

Taking Locke's epistemology as a starting-point, Maine de Biran elaborated the notions of expectation of resistance and kinaesthetic response into a theory which attempted to account for the origin of our ideas of personal identity and causation. In this clear and intelligent study, Hallie compares Maine de Biran to the British empiricists, finding him most in sympathy with Berkeley; he also assesses the importance and limitations of this internal critique of empiricism for both empiricism and later French philosophy.

HALLIE, Philip Paul. *The Scar Of Montaigne: An Essay In Personal Philosophy*. Middletown CT Wesleyan Univ Pr 1966.

HALLIE, Philip P. Hume, Biran And The *Méditatifs Intérieurs*. *J Hist Ideas* 18,295–312 Je 57.

HALLIE, Philip P. On So-Called "Counterfactual Conditionals". *J Phil* 51,273–277 Ap 54.

HALLIE, Philip P. The Privacy Of Experience. *J Phil* 58,337–345 Je 61.

The author argues that current controversies over the privacy of experience use the word "private" in ways radically different from the ways it is used in ordinary talk. He then shows how confusions arise when this difference is ignored. Finally, he indicates how the confusion can be cleared up by becoming aware both of this difference and of the everyday meaning of the word "private".

HALLIE, Philip P. Wittgenstein's Grammatical-Empirical Distinction. *J Phil* 60,565–577 S 63.

The purpose of this paper is to suggest an important fault in the way Wittgenstein makes the distinction between grammatical and empirical claims. The contention is that he has dichotomized too sharply in making the distinction: he too often puts a proposition into one or the other category. What Wittgenstein sometimes designates as "plain nonsense" because, among other things, it is empirically empty is sometimes not empirically empty at all. The paper tries to show that a grammatical

- recommendation or proposition can be both a grammatical proposition and an empirical one and consequently not "plain nonsense."

- HALLOWELL, John H.** *The Decline Of Liberalism As An Ideology: With Particular Reference To German Politico-Legal Thought.* Berkeley Univ Of Calif Pr 1943.
- This book traces the decline of liberal legal theory in Germany. It starts with a definition of "integral liberalism," which, the author claims, is the only sound foundation for equality and freedom. German legal theory at the end of the eighteenth century had such a basis, but it gradually deteriorated to a point where some German "liberals" could accept National Socialism. The book is an attempt to show how this came about.

- HAMBURG, Carl H.** Arguments, Actions, And Some Intellectuals. *Ethics* 73,287-292 JI 63.
- Paul Goodman has recently argued that intellectuals resist what he calls "practical syllogisms" in that they do not act and make choices on the basis of their reasonings. His argument is fallacious first because his example of a practical syllogism cannot lead to a prescriptive conclusion since it lacks a prescriptive premise and secondly because it would require us to believe it necessary always to act here and now on prescriptions we accept. Thirdly, it supposes that the move from belief to action occurs in thought. Contrary to what Goodman says, the real problem is not action but "proper action."

- HAMBURGER, Joseph.** *Intellectuals In Politics: John Stuart Mill And The Philosophic Radicals.* New Haven Yale Univ Pr 1965.
- A coterie of approximately 20 British Philosophic Radicals, including J S Mill, George Grote, and David Ricardo, came together in the 1820's. Some of them were elected to Parliament, where they formed a doctrinaire group dedicated to promoting social reform along utilitarian lines as previously developed by Jeremy Bentham. Their initial energetic activities, the problems which they encountered, their ultimate disillusionment, and their disappearance from politics are the subject of this book. A concluding chapter, entitled "Aftermath," suggests that although the Philosophic Radicals failed to achieve their broad aim, many of their lesser aims achieved fruition.
- HAMBURGER, Max.** *Morals And Law; The Growth Of Aristotle's Legal Theory.* New Haven Yale Univ Pr 1951.
- The author makes a painstaking study of the chronology of the three works in ethics, ascribed to Aristotle, and their bearing upon the *Politics* and the *Rhetoric* insofar as they outline a consistent doctrine of the mean, tempered by a view of *epieikeia*, equity and fairness, and by *philia*, social sympathy or civic friendship.

- HAMILTON, Daniel J and Morris, Charles.** Aesthetics, Signs, And Icons. *Phil Phenomenol Res* 25,356-364 Mr 65.
- This article reviews the main discussions and criticisms occasioned by the paper of Charles Morris, "Esthetics and the Theory of Signs." This paper had suggested that the work of art was an iconic sign signifying the value which, as iconic, it embodied in itself as sign-vehicle. The theory of signs was considered the proper metalanguage for aesthetics. The present article displays criticisms of this view: that the work of art is not a sign; that the treatment of the iconic sign raises a number of problems; that semiotic has at best a limited value for aesthetics.
- HAMILTON, Kenneth.** *The Promise Of Kierkegaard.* Philadelphia Lippincott 1969.
- HAMILTON, W F.** Brain, Mind, Et Al. *Humanist* 15,89 Ap 55.
- HAMLIN, D W.** Aristotle On Predication. *Phronesis* 6,110-126 1961.
- HAMLIN, David Walter.** *Sensation And Perception: A History Of The Philosophy Of Perception.* NY Humanities Pr 1961.
- The problem of perception is one of specifying correct and consistent meanings for the concepts we use in talking about it. The most frequent mistake in the history of this concept has been to "reduce" perception either to sensation or to judgment. With this in mind, the author deals primarily with the period from Descartes to Kant, though ancient, medieval, and contemporary developments are also treated.
- HAMLIN, David Walter.** *The Theory Of Knowledge.* Garden City NY Anchor Books 1970.
- HAMM, Russell L.** *Philosophy And Education: Alternatives In Theory And Practice.* Danville IL 1974.
- HAMM, Victor M.** *Language, Truth And Poetry.* Milwaukee Marquette Univ Pr 1960.
- Whereas two influential contemporary theories, Logical Positivism and Mythologism, regard poetry as mere emotive utterance and as the expression of a privileged and unique knowledge, a "symbolic expression of reality, a specific and original form of life," the author considers it the vehicle of a poetic truth which is more than emotional utterance while not being an esoteric revelation. Poetic truth is the correspondence of the finished work to the poet's intent, a truth of making rather than of knowing.

- HAMMOND, Albert L.** On 'Sensation'. *Phil Rev* 53,260-285 My 44.
- HAMMOND, Albert L.** On Being Put In Mind Of The Mental. *J Phil* 48,211-214 Mr 51.
- HAMMOND, Guyton B.** *Man In Estrangement: A Comparison Of The Thought Of Paul Tillich And Erich Fromm.* Nashville Vanderbilt Univ Pr 1965.
- The concept of alienation is traced from Hegel through its variations in Feuerbach, Marx and Freud. Fromm's naturalistic version of alienation is given careful exposition, close comparison with Tillich's theologically based version, and criticism from the point-of-view of the latter. The author reads Tillich as understanding God in terms of "life" rather than "being-itself"; in the life of God there is ground for man's transcendence of alienation.
- HAMMOND, Kenneth R.** Relativity And Representativeness. *Phil Sci* 18,208-211 Jl 51.
- HAMMOND, Mason.** *City-state And World State In Greek And Roman Political Theory Until Augustus.* Cambridge Harvard Univ Pr 1951.
- This book, written for the general student of political theory, contains an account of Greek and Roman political thought. The author attempts to show in these pages that one reason for the decay of classical civilization was the inability of the Greeks and Romans to find a new basis in political theory for the Hellenistic kingdoms and Roman empire which outgrew the concept of the Greek city-state. He traces the growth of the concept of the city-state, indicates how it failed to meet later expanded governmental forms, and the eventual application of the concept of Polybius to Roman history.
- HAMMOND, P Malcolm.** Human Freedom And The Heisenberg Principle. *Phil Forum (Boston)* 7,6-11 Spr 49.
- HAMMOND, Robert.** *The Philosophy Of Alfarabi And Its Influence On Medieval Thought.* NY Hobson Book Pr 1947.
- Rev Hammond's study of Alfarabi's works seems to be based on Schmoelders' *Documenta philosophia arabum* and various commentaries in English and French. The main problems discussed in the book deal with theology, metaphysics, cosmology, psychology, ethics, and politics.
- HAMPSCH, George H.** *The Theory Of Communism, An Introduction.* NY Philosophical Lib 1965.
- This book is an investigation of Marxism-Leninism as a complete world view and seen principally from the perspectives of Soviet and Chinese theoreticians. It is written for readers at the college level. Areas covered are ontology, epistemology, philosophy of science, philosophy of history, economics, the nature of human freedom and destiny, ethics, the philosophy of religion, political theory, philosophy of education and aesthetics. Suggested readings from primary and secondary sources follow each chapter.
- HAMPSCH, George H.** "Technology In The Prospects For Peace: The View From Another Side" in *The Soviet Union*, Bernard Eissenstat (ed), 267-276. Lexington MA Heath 1975.
- Marxist-Leninists in the Soviet Union view technological advances as positively improving the prospects for world peace by altering the material conditions in both socialist and capitalist nations. This allows for an ever-increasing need and desire for detente among nations of differing social systems. The conditions of peaceful coexistence however present certain dangers to socialist nations in maintaining the class struggle. These dangers are recognized and efforts have been forthcoming to offset them.
- HAMPSCH, George H.** "The Practice Of Freedom: A Prerequisite For The Catholic-Marxist Rapprochement" in *Marxism And Christianity*, H Aptheker (ed), 122-142. NY Humanities Pr 1968.
- Very serious difficulties block the way to a meaningful rapprochement between the Catholic Church and Marxist thought. This work can be accompanied through a three-pronged but simultaneous process: (1) Clearing away ignorance and misunderstanding of each other's position, as well as suspicion that the motives of the other are less pure than its own, (2) Recognizing common errors, common distortions and misapplication of principles in practice, (3) Recognizing mutually acceptable positions or tenets.
- HAMPSCH, George H.** Marxist Jurisprudence In The Soviet Union: A Preliminary Survey. *Notre Dame Lawyer* 35,525-536 1960.
- Basic principles of Marxist philosophy of law and jurisprudence are presented and analyzed. Special emphasis is placed on the relationship between law and morality within the Marxist world view. Soviet philosophers of law are seen to reject both positivism and the various theories of natural law.
- HAMPSCH, George H.** Moral Implications Of Business. *Review* 17,22-24 Fall 65.
- The code of the professional man prohibits any activities that are detrimental to the interests of the profession. It also demands that he stay abreast of the scholarly progress within the profession. Above all it requires that he maintain allegiance to the principle "that public service is to take precedent over financial gain." Historically, the business man has not been considered as belonging to a profession. There are some changes in contemporary times. The business community can judge the extent it is approaching professional status by the extent it has whole-heartedly accepted the ethical implications of a profession. Progress has been made. More must be forthcoming.
- HAMPSCH, George H.** The Link Between Science And Philosophy Within Soviet Ideology. *Amer Slavic East Europ Rev* 20,118-122 F 61.
- This article seeks a definitive exposition and occasional critique of the current Soviet position regarding the relation of philosophy to the natural sciences. The present role of philosophy has resulted from a successful struggle against two extremist views on the position of philosophy amongst the Bolsheviks themselves. Marxist epistemology requires a "partisan spirit" in philosophy and in the interpretation of scientific facts.
- HAMPSCH, George H.** The Marxist Notion Of Social Class. *Duquesne Review* 9,25-42 Fall 63.
- For Marx, the socialization process has been determined by social classes and their activity. This is possible because the social class is seen to be the principle of economic, political and moral exploitation. The Marxist concept of class as distinguished from any classification used in modern sociology would seem to be individuals and/or groups having the same values resulting from relations of production and which may be thought of as a social unit because of the unity of activities following upon common goals. Communist Party activity is explained as activity of the proletarian class.
- HAMPSCH, John H.** Integrative Determinants In The Philosophy Of Education Of St Thomas Aquinas. *Educ Theor* 9,31-40 Ja 59.
- HAMPshire, Stuart Newton.** *Freedom Of Mind, And Other Essays.* Princeton NJ Princeton Univ Pr 1971.
- HAMPshire, Stuart.** *Freedom Of The Individual.* NY Harper & Row 1965.
- Stuart Hampshire carries further his attempt to arrive at a "definition of man," which was begun in *Thought and Action*. He suggests that a distinction must be drawn between the powers that can be attributed to men, and those attributable to machines and animals. The "human" notion of power is essentially tied to desire. An important distinction is drawn between "simple" desires, and desires "mediated" by thought and language. These distinctions lead to a further distinction between two kinds of knowledge: knowledge based on induction, and knowledge based on decision and the forming of intentions. The "human" senses of power, desire and knowledge derived from decision are presented as important constitutive characteristics of our concept of a human agent. A main theme of the book is that as a man's self-knowledge increases, so does his freedom; for knowledge of factors (both "internal" and "external") which limit decision and action provides a means either for overcoming these or of more effectively acting within their scope.
- HAMPshire, Stuart.** J L Austin And Philosophy. *J Phil* 62,511-512 O 65.
- HAMPshire, Stuart.** On Referring And Intending. *Phil Rev* 65,1-13 Ja 56.
- HAMPshire, Stuart.** Reply To Walsh On *Thought And Action*. *J Phil* 60,410-424 Jl 63.
- In this reply to James Walsh's criticism of *Thought and Action* (*Journal of Philosophy*, Volume 60, 1963), the book's author sets about to clarify his positions on those topics that the reviewer complained of unclarity, at the least. These are the accounts, given in the book, of intention and of morality and moral judgements, as well as of art and aesthetic judgments.
- HAMPSON, Norman.** *The Enlightenment.* Baltimore Penguin Books 1968.
- HAN, Yu-Shan.** The Philosophical Background Of Chinese Painting. *Personalist* 21,48-60 Ja-Wint 40.
- HANCHER, Michael.** Three Kinds Of Intention. *Modern Language Notes* 87,827-851 D 72.
- This article analyzes concepts underlying "the intentional fallacy," and discusses ambiguities in the seminal article by Wimsatt and Beardsley (1946), and surveys more recent arguments. It finds that three concepts have been confused under the word "intention": namely (1) "programmatic intention," or intention to write; (2) "active intention," or meant meaning; (3) "final intention," or ulterior purpose. The author holds that arguments discounting (1) or (3) carry no force against (2). Hancher compares the three kinds of intention to J L Austin's three kinds of speech acts, and takes up Wittgenstein's challenge to explain how one might say one thing and yet mean something else.
- HANCHER, Michael.** Understanding Poetic Speech Acts. *College English* 36,632-639 F 75.
- One kind of ambiguity that can mislead interpreters of literature is illocutionary-act ambiguity, an aspect of language use first discussed by J L Austin. Two poems (by Shakespeare and Frost) provide examples.
- HANCOCK, Roger And Others.** Problems And Perplexities. *Rev Metaph* 15,125-147 S 61.
- HANCOCK, Roger N.** *Twentieth Century Ethics.* NY Columbia Univ Pr 1974.
- The aim is to give a critical account of the development of meta-ethics in twentieth century British and American philosophy, beginning with G E Moore and ending with the return to normative ethics in the work of Marcus Singer and John Rawls. The thesis of the work, argued principally in the conclusion, is that naturalism as a meta-ethical theory is defensible, in that certain theses commonly associated with naturalism are rationally supportable: these include the absence of a clear distinction between factual and evaluative statements, the derivability of evaluative conclusions from non-evaluative premises, and the rational resolvability of ethical disagreement.
- HANCOCK, Roger.** A Note On Naturalism. *Ethics* 77,62-66 O 66.
- HANCOCK, Roger.** Ethics And History In Kant And Mill. *Ethics* 68,56-60 O 57.
- HANCOCK, Roger.** Ideas Of Freedom. *Rev Metaph* 15,647-655 Je 62.
- HANCOCK, Roger.** Interpersonal And Physical Causation. *Phil Rev* 71,369-376 Jl 62.
- In *Causation in the Law* Hart and Honoré make a distinction between physical causation and interpersonal causation. They claim that the meaning of causal language used in the two cases differs markedly, particularly in that an assertion of

physical causality entails a general statement about all similar cases, while assertions of interpersonal causation do not. Against this claim Hancock argues that it cannot be shown—either empirically or a priori—that assertions of interpersonal causation do not entail general statements.

HANCOCK, Roger. The Refutation Of Naturalism In Moore And Hare. *J Phil* 57,326–333 My 60.

The author first restates and criticizes Moore's open-question argument against naturalism and then restates and criticizes Hare's refutation of naturalism. Neither philosopher, he claims, is successful in showing that sentences of the form "What is F is good" are never analytic. The author questions the possibility of any conclusive refutation of naturalism.

HAND, Harold C. A Scholar's Documentation. *Educ Theor* 4,27–48 Ja 54.

HANDEN, Ralph D and Rule, John C. Bibliography Of Works On Carl Lotus Becker And Charles Austin Beard, 1945–1963. *Hist Theor* 5,302–314 1966.

HANDLIN, Oscar. John Dewey's Challenge To Education: Historical Perspectives On The Cultural Context. NY Harper 1959.

HANDY, Rollo (ed) and Farber, Marvin (ed) and Madden, Edward H (ed). *Philosophical Perspectives On Punishment*. Springfield IL Thomas 1968.

The book consists of a symposium on philosophical perspectives on punishment. The four major papers were delivered by three philosophers (Charles A Baylis, Brand Blanshard, C J Ducasse) and one legal scholar (Mitchell Franklin), and eight commentaries on those papers were given by philosophers, legal scholars, and behavioral scientists. In general the participants defended a teleological view of punishment and rejected the retributivist and deontological views, although the latter position was not wholly without support.

HANDY, Rollo. *Methodology Of The Behavioral Sciences: Problems And Controversies*. Springfield IL Thomas 1964.

Much of the existing literature on philosophy of science was written either by scientists for other scientists or by philosophers for other philosophers. The failure of communication between the two groups often has been disturbing. The book brings together both types of literature. Philosophy is viewed as primarily concerned with inquiry into inquiry. Major attention is given to those problems and controversies in the methodology of the behavioral sciences that are recognized as significant by working scientists. Topics are discussed relating to psychology, anthropology, sociology, economics, history, political science, jurisprudence, linguistics, game theory, decision theory, information theory, cybernetics, and general systems theory.

HANDY, Rollo. *The Measurement Of Values: Behavioral Science And Philosophical Approaches*. St Louis Green 1970.

Philosophers often have placed major emphasis on attempts to clarify value terminology and to differentiate values from the rest of the universe. Behavioral scientists have emphasized the description of the values held by particular individuals or groups of humans, and often have claimed to measure values. The book combines the relatively empirical work of behavioral scientists with the relatively theoretical work of philosophers. There are chapters on theoretical issues in measurement, a review of many alleged measurements of values, a criticism of some formalized attempts to study values, and a critique of the views of R B Perry, Stephen Pepper, and Charles Morris.

HANDY, Rollo. *Value Theory And The Behavioral Sciences*. Springfield IL Thomas 1969.

Major emphasis in the book is placed on issues in value theory as illuminated by recent work in the behavioral sciences. The value theories of John Dewey, R B Perry, and Stephen Pepper are critically analyzed. A need-theory of value is developed by the author that draws upon the views of the American naturalists while also emphasizing behavioral science findings. The views of linguistic philosophers are severely criticized, although considerable attention is devoted to terminological problems.

HANDY, Rollo. An Analytic And A Dogmatic Ethics. *Rev Metaph* 10,690–697 Je 57. This article is a critical study of two books: D Daiches Raphael, *Moral Judgement* (1955), and Dietrich Bonhoeffer, *Ethics* (1955). After a discussion of the contents of each book, they are both criticized from a naturalistic perspective. Criticism is also made of relying upon common usage in ethical theory.

HANDY, Rollo and Harwood, E C. *Useful Procedures Of Inquiry*. Great Barrington MA 1973.

The book contains a critical section on the nature of scientific inquiry and also analyses critically several inquiries in various fields of behavioral science. Emphasized throughout the book, and further developed, are the transactional procedures of inquiry described by John Dewey and Arthur F Bentley in their book, *Knowing and the Known*. The full text of *Knowing and the Known* is reprinted in the volume, as is Joseph Rotner's "Introduction to John Dewey's Philosophy." There is an appendix on terminological problems in philosophy and the behavioral sciences.

HANDY, Rollo and Harwood, E C. Transactional Procedures Misunderstood. *Amer J Econ Social* 34,103–111 1975.

The views of John Spiegel (in his *Transactions: The Interplay Between Individual, Family, and Society*) are critically reviewed. Spiegel, although sometimes disagreeing with the transactional procedures of inquiry developed by Dewey and Bentley, believes that many important human problems are best investigated by using those procedures. The authors argue that in some instances Spiegel has not fully understood Dewey and Bentley, and they reconsider some of the major differences among self-actional, interactional, and transactional procedures of inquiry.

HANDY, Rollo and Kurtz, Paul. *A Current Appraisal Of The Behavioral Sciences*. Great Barrington MA 1964.

This book discusses both the substantive content of many behavioral science fields and topics in philosophy of science. Current methodological and other controversies

are emphasized, as well as semantic problems. Chapters are devoted to Anthropology, Sociology, History, Economics, Political Science, Jurisprudence, Psychology, Education, Information Theory, Cybernetics, Linguistics, Sign-Behavior, Game Theory, Decision-Making Theory, Value Inquiry, and General Systems Theory. A general bibliography is appended. The book also was serialized as a series of seven Supplements to *The American Behavioral Scientist*, Volume VII, September 1963 through March 1964.

HANDY, Rollo and Kurtz, Paul. A Reply To B F Skinner. *Amer Behav Sci* 7,12 1963. B F Skinner's views on "theory" are discussed, particularly the ways in which Skinner may be understood as hostile toward, or skeptical of, theorizing.

HANDY, Rollo. Comments On Harrell's "Marx And Critical Thought". *Paunch* 44–45,92–107 My 76.

The author argues that many well-intentioned social reformers use the same basic epistemological framework as do the "conservatives" that they are criticizing. The transactional procedures of inquiry developed by John Dewey and A F Bentley are described, and it is argued that their use may lead to solutions of pressing human problems, whereas the traditional epistemological framework is likely to yield conflicting if not incoherent results. In particular, the "quest for certainty," found both in reformers and conservatives, is severely criticized.

HANDY, Rollo. Determinism, Responsibility, And The Social Setting. *Phil Phenomenol Res* 20,469–476 Je 60.

The complex of problems involved in the determinism-libertarianism controversy has been discussed from many theoretical points of view. Various forms of determinism and libertarianism have been held to be inimical to ethics; both have been declared to be either meaningless or useless; and responsibility has been said by some to depend on libertarianism, and by others to depend upon determinism. In the context of an acceptance of determinism, the author examines and defends a deterministic view of responsibility, and rejects criticism of that view based on ordinary language considerations.

HANDY, Rollo. Existential Vs Biosocial Theories Of Man. *Phil Phenomenol Res* 24,244–246 D 63.

Existential theories of human nature are criticized as ignoring well-founded evidence from the behavioral sciences. The paper argues that humans are biosocial organisms operating in, and by means of, their environment; to ignore such data to the degree existentialists usually do is to make "existence" more precarious than is necessary.

HANDY, Rollo. Naturalistic Definitions In Ethics And "Common Usage". *Phil Phenomenol Res* 16,540–546 Je 56.

The author agrees that proposed naturalistic definitions of ethical terms often are not in accord with what some people mean when they use those terms. The author argues, contrary to the views of many writers on ethical discourse, that this is not enough to render the naturalistic definitions inadequate. There are no compelling reasons why ethical terms should enjoy a privileged status compared to terms in other fields, which often are redefined in the light of new knowledge. In many areas of discourse, it is clear that "common usage" was modified over time and that progress only occurred when a commonly accepted term was redefined.

HANDY, Rollo. Personality Factors And Intellectual Production. *Phil Sci* 23,325–332 O 56.

The possible relations of an individual's personality structure and the choice of occupation made are intriguing. In the case of science and philosophy, personality factors may be related to what type of work the person thinks should be done, what areas should be studied, or even what science and philosophy are taken to be. This paper briefly considers some representative views about the effect of personality factors on one's view of science, and treats more thoroughly the relation of the philosopher's personality to the type of philosophy done. The author argues that philosophic inquiry is a type of human behavior and that, as such, social scientists have something pertinent to say about it.

HANDY, Rollo. Philosophy's Neglect Of The Social Sciences. *Phil Sci* 25,117–124 Ap 58.

The problem of the "proper" relation of philosophy and science has been the source of many disputes. Recently some philosophers and scientists have held that technical philosophers are neglecting the results of social science research, to the detriment of philosophy. The paper considers attempts made by contemporary philosophers to utilize material from the social sciences, reviews certain of the arguments in favor of the utilization of such material, and considers criticisms of that approach. The author concludes that to admit that the content of one's thought is influenced by psychological, sociological, and cultural factors (as well as by logic and well-verified evidence) is not to demean philosophy, but rather is to help free it from biasing impediments.

HANDY, Rollo. Some New Developments In Behavioral Science. *Social Soc Res* 50 1966.

This paper comments critically on some of the newer developments in the behavioral science, in the context of issues in the philosophy of science. "New" is a vague term here, since what is relatively new in one area of inquiry may be relatively old in another. The focus is on recent developments that can be found in many areas of behavioral inquiry. Part I emphasizes some of the newer techniques, and Part II emphasizes methodological (philosophical) issues. Criticism is made of the use of many formal models, including computer models, and a defense of field or transactional procedures of inquiry is given.

HANDY, Rollo. Some Possible Contributions Of Sociology To Philosophy Of Science. *Social Soc Res* 48,261–269 1964.

Philosophy of science is viewed as one form of human behavior, and it is argued that many features of scientific methodology and its application can best be understood in the social context. Some ways in which sociological findings may prove helpful to philosophers of science are discussed. The paper argues that the methods of

- procedure used should be as controlled by inquiry as inquiry is controlled by methodology (i.e., that there is no once-and-for-all hierarchical ordering).
- HANDY, Rollo.** The Naturalistic "Reduction" Of Ethics To Science. *J Phil* 53,829-834 D 56.
- Some ethical naturalists and several critics of the naturalists agree that naturalistic ethical theories "reduce" ethics to science. Some such views are discussed and criticized. The author concludes that although naturalism is "reductionistic" in the sense of asserting that normative terms are descriptive, naturalists need not advocate making ethics "merely" a branch of some science. Naturalistic theories are best viewed as attempts to show the relevance of data from many scientific disciplines.
- HANDY, William J.** *Kant And The Southern New Critics.* St Austin TX Univ Of Texas Pr 1963.

- HANNA, Thomas.** *The Lyrical Existentialists.* NY Atheneum 1962.
- HANNA, Thomas.** *The Thought And Art Of Albert Camus.* Chicago Regnery 1958.
- "It is the purpose of this book to present an analytical study of the thought of Albert Camus as seen in both his literary and philosophical productions." The author traces the development of Camus' thought from his early essays, plays, and novel in which the problem of the absurd is dialectically developed, to a later period in which man in revolt is emphasized, to a final study of *The Fall* in which a concern with individual guilt is seen as a new dimension of Camus' career. Philosophical interpretations of Camus' major literary works are offered. The author insists that "Camus' literary productions cannot be understood properly without knowledge of his philosophical position." A short bibliography is included.
- HANNAFORD, Robert V.** Patterns In The Growth Of Meaning Drawn From The Behavioral Sciences. *Ethics* 74,53-60 O 63.
- "Growth of meaning" refers to "the processes whereby the individual acquires and uses values and concepts." The behavioral sciences agree on a general theoretical explanation of the growth of meaning. This explanation points to the affiliative, intellectual, and moral dependence on other persons with the same needs as oneself.
- HANNAN, Werner.** Philosophers Against Man. *Fran Stud* 5,162-174 Je 45.
- HANNAY, Howard.** The Principles Of Political Liberty. *Ethics* 50,1-15 O 39.
- HANSEN, Emmanuel.** *Frantz Fanon: Social And Political Thought.* Columbus Ohio State Univ Pr 1977.
- This work focuses on the thought of Frantz Fanon. The author develops Fanon's concepts of man, state and society, basing his analyses of these on the complete corpus of Fanon's published works. Biographical background is provided insofar as this is relevant to Fanon's views, and illustrative of his insistence on the unity of thought and action. Topics discussed include the political ideal of freedom, alienation as the chief impediment to freedom, and revolutionary violence as the way to end alienation. The ideal polity of Fanon is represented as a mixture of Marxian socialism and Rousseau's ideal community.
- HANSEN, Kenneth H.** *Philosophy For American Education.* NY Prentice-Hall 1960.
- Based on the view that educational practice of any sort has philosophic implications, this book seeks on an elementary level to make explicit the philosophic issues in current educational problems, and to show where the major systems of educational philosophy stand in relation to them. Traditional philosophies are set forth and evaluated, especially as they apply to education. Current educational problems are examined as they relate to the philosophic concerns of reality, truth, and value. The brief outlines of a "believable, respectable, tenable, and satisfying philosophy of education" called "empirical idealism," or "enlightened pragmatism," are set forth.

- HANSON, Norwood R.** *Perception And Discovery: An Introduction To Scientific Inquiry,* W C Humphreys (ed). San Francisco Freeman Cooper 1969.
- This is a Textbook for introductory courses in the philosophy of science. It is edited by W C Humphreys from an unfinished manuscript of Hanson's. The result is a somewhat uneven product, with certain topics, i.e., theory-laden character of observation treated exhaustively and others, induction and probability, treated sketchily. The book is divided into 4 parts and 25 chapters. Part I sets up the problems of the philosophy of science as conceptual analysis with an introduction to concept "formulation." Part II lays out a theory of observation which rejects phenomenalism and argues for the theory ladenness of seeing. Part III examines the nature and role of hypotheses, laws, principles and theories in science. The presentation here is instrumentalistic. Part IV presents a very elementary introduction to the role of probability and statistics in sciences.
- HANSON, Norwood R.** Uncertainty. *Phil Rev* 63,65-73 Ja 54.
- HANSON, Norwood Russell And Others.** *Beyond The Edge Of Certainty,* Robert Garland Colodny (ed). Englewood Cliffs NJ Prentice-Hall 1965.
- HANSON, Norwood Russell.** *Observation And Explanation: A Guide To Philosophy Of Science.* NY Harper & Row 1971.
- HANSON, Norwood Russell.** A Budget Of Cross-type Inferences, Or Invention Is The Mother Of Necessity. *J Phil* 58,449-470 Ag 61.
- The author sets out to defend a version of the Hume-Leibniz-Lewis-Langford dictum that from the contingent nothing necessary follows and that from what is necessary nothing contingent follows. This dictum, if well established, is sufficient to cause the collapse of much of traditional metaphysics. Although there are inferences in theoretical logic and in everyday reasoning which do proceed across types, the author concludes that they are all conceptually harmless. From these cross-type inferences speculative metaphysicians gain nothing, and deductive logicians lose nothing.
- HANSON, Norwood Russell.** A Note On The Gödel Theorem. *Notre Dame J Form Log* 2,228-229 1961.
- HANSON, Norwood Russell.** Aristotle (And Others) On Motion Through Air. *Rev Metaph* 19,133-147 S 65.
- The author demonstrates that in the account of projectile motion Aristotle anticipated Prandtl's "starting vortex" theory, a cornerstone of modern aerodynamics. He first presents Aristotle's analysis of motion through air, focusing on his insight that the liquescent medium of air assists flight as well as resisting moving objects. Then he considers Philoponus' objections to Aristotle's "medium" theory in the sixth century and traces the subsequent development of the opposing "impetus" theory through the work of Newton and Galileo. Finally, the author presents the unknowing rediscovery of Aristotelian ideas in the theoretical physics of Lanchester, Bernoulli, and Prandtl.

- HANSON, Norwood Russell.** It's Actual, So It's Possible. *Phil Stud* 10,69-80 1959.
- HANSON, Norwood Russell.** More On "The Logic Of Discovery". *J Phil* 57,182-187 Mr 60.
- In response to Donald Schon's criticism, the author clarifies and revises certain points in his paper "The Logic Of Discovery." First he distinguishes between the justification of the proposal of hypotheses and the description of the processes involved in formulating hypotheses. He then notes that in hypothesis formulation, the reasons which justify the formulation and proposal of hypothesis H are not specific to H but are appropriate only to the type of hypothesis of which H is one possible token.

- HANSON, Norwood Russell.** The Irrelevance Of History Of Science To The Philosophy Of Science. *J Phil* 59,574-585 O 62.
- History of science and philosophy of science are not logically related: to claim that they are would be either to underestimate or to misunderstand the genetic fallacy. But one risk of inferring that there is no connection at all between the two is the risk that philosophers of science may not know what they are talking about. The philosopher of science who does not know intimately the history of the scientific problem with which he is exercised may be discussing no genuine state of affairs. On the other hand, the historian and philosopher of science are both concerned with the structure of scientific ideas, and these concerns are fused into one when the scientific argumentation of the past is the issue.

- HÄRING, Bernhard.** *Ethics Of Manipulation: Issues In Medicine, Behavior Control And Genetics.* NY Seabury Pr 1975.
- This book deals with ethical aspects of medical, behavioural and genetic manipulation. Various meanings of 'manipulation' are analyzed. An attempt is made to demarcate those kinds of manipulation which transgress the limits posed by human freedom and dignity. The first chapter considers various forms of manipulation outside the medical and biological fields. The second chapter tries to isolate fundamental criteria for discerning and evaluating manipulation. The third and longest chapter studies manipulation in medicine. Among the topics discussed are contraception, child management, euthanasia and the management of dying, behaviour therapy and modification, cybernism, psycho-active drugs, psycho-surgery, brainwashing, brain management with electrodes, gene therapy, genetic counseling and prenatal diagnosis, and artificial human reproduction.

- HARING, Ellen S.** The Ontological Principle. *Rev Metaph* 16,3-13 S 62.
- According to Whitehead's ontological principle, the real is intelligible; there is an irreducible plurality of kinds of causation; all causes are, or are integral to, concrete energetic beings; and those beings are actual events. After presenting Whitehead's fully articulated principle, the author examines objections to its third part. Some philosophers, including Aquinas, Descartes, and Leibniz, qualify their acceptance of Whitehead's Aristotelian position by distinguishing God from other substantial beings; others, including Plato and Weiss, reject Whitehead's position altogether, and argue for the independent reality of distinct major causes which are not actualities and do not belong to a divine subject.

- HARMAN, Gilbert (ed).** *On Noam Chomsky: Critical Essays.* Garden City NY Anchor Pr 1974.
- This anthology is devoted to Chomsky's theory of language and contains essays by philosophers, linguists, psychologists and an anthropologist. The initial essay, "Chomsky's Revolution in Linguistics," by John Searle, gives a clear exposition of the essentials of the theory, its revolutionary position vis-à-vis structural linguistics and the recent challenge to it by new developments in generative semantics. Except for the final essay, Dell Hymes' review of John Lyon's *Noam Chomsky*, which discusses the historical background of Chomsky's theory, the editor has grouped the papers into three sections. The essays in the first section are mainly concerned with methodological issues and the relation between psychology and Chomsky's theory. In the second group, papers are concerned with Chomsky's claim that his theory constitutes a defense of rationalism and the theory of innate ideas. The essays in the third section take up questions regarding the relations between grammar, meaning and logical analysis.
- HARMAN, Gilbert (ed) and Davidson, Donald (ed).** *Semantics Of Natural Language.* NY Humanities Pr 1972.
- HARMAN, Gilbert H.** How Belief Is Based On Inference. *J Phil* 61,353-359 Je 64.
- Harman argues that (1) beliefs may be based on inference even when they are not based on conscious inference and (2) it is possible for a philosopher to hold that all or most beliefs are based on inference. He does this by attempting to define a relevant meaning for the phrase 'based on inference' such that questions about the warrant for a belief become questions about the warrant or validity of an inference.
- HARMAN, Gilbert H.** Lehrer On Knowledge. *J Phil* 63,241-247 Ap 66.
- The article discusses whether the following conditions would be necessary and sufficient for S to know h: (1) h is true, (2) S believes h, and (3) S is completely justified in believing h. The article (1) attempts to clarify Lehrer's analysis of 'know', in which Lehrer finds defects in several recent proposals concerning the correct analysis, (2) asks whether or not Lehrer is correct, and (3) uncovers some inadequacies in Lehrer's analysis.
- HARMAN, Gilbert H.** The Inference To The Best Explanation. *Phil Rev* 74,88-95 Ja 65.
- Enumerative induction should not be considered a warranted form of non-deductive inference in its own right. In cases where it appears that a warranted inference is an instance of enumerative induction, the inference should be described as a special case of another sort of inference, "the inference to the best explanation." Two arguments for this claim are given: (1) One can best account for when it is proper to make inferences which appear to be applications of enumerative induction by describing these inferences as instances of the inference to the best explanation; (2) Taking the inference to the best explanation (rather than enumerative induction) to be the basic form of nondeductive inference enables one to account for an interesting feature of our use of the word "know."
- HARMAN, Gilbert.** *Thought.* Princeton NJ Princeton Univ Pr 1973.
- As fundamental reflection on the roots of induction and deduction, this account recommends itself as an answer to radical skepticism which builds on and satisfies the common sense belief that the arguments for radical skepticism must be wrong. The theory considers thought, insofar as it infers and reasons, to be a pursuit of increasing explanatory coherence which minimizes change in our total view.

- HARRAH, David.** *Communication: A Logical Model*. Cambridge MA MIT Pr 1963. This book constructs a model or theory of the sender-receiver situation within communication theory, in an attempt to clarify how a rational receiver asks questions, receives messages, and evaluates the relative merits, the adequacy, and informativeness of various answers. Furthermore, the receiver himself needs not only an underlying logic, but metalanguages for talking about that logic. Fundamentally, questions are treated as certain statements, "whether" questions as disjunctions, "which" questions as existential quantifications, and so on, to which answers are information-matching responses that reduce doubt.

- HARRIS, Abram L.** *Economics And Social Reform*. NY Harper 1958. The author (professor of economics at the University of Chicago) presents a series of expositions and critical examinations of the thought of five advocates of economic reform (John Stuart Mill, Karl Marx, Thorstein Veblen, John R Commons, Werner Sombart) and of the program for the corporate state sketched in Papal Encyclicals (as systematized by Heinrich Pesch). In a Foreword, Professor Frank H Knight defines the standpoint of the critique as "economic common sense rather than a closely knit theoretical system of the author's own." Much of the material has appeared in earlier form in articles in learned journals.

- HARRIS, Catherine.** The Metaphysics Of Expression. *Phil Phenomenol Res* 24,268-277 D 63. Harris takes issue with Nicol's variety of social positivism, and claims that it would have detrimental effects on sociology. It is thought that Nicol's metaphysics is a value ontology, and that his views both metaphysically and logically are inadequate as a foundation for the study of society.
- HARRIS, Errol E.** *Essays In The Philosophy Of History*, By R G Collingwood. *Hist Theor* 5,202-206 1966. Collingwood's essays on history not only illuminate historical theory concerning the reality of the past and its relation to the present, methods of discovering past events, and historical cycles, but also throw much light on metaphysical problems of time, on epistemological questions, and even on ethical and aesthetic theory. Collingwood argues that the view confining the aims of history to knowledge of the particular, and of science to knowledge of the universal is misguided, for each is equally concerned with both. He also maintains that history is to be identified with perception, and both history and science are the interpretation of sensuous material by thought. While Collingwood does reject the notion of history as a search for general laws and cyclical pattern, he is seen to view the historian's task as achievement of a total conspectus.
- HARRIS, Errol E.** *Hypothesis And Perception: The Roots Of Scientific Method*. NY Humanities Pr 1970.
- HARRIS, Errol E.** *Nature, Mind And Modern Science*. NY Macmillan 1954.
- HARRIS, Errol E.** *Persons In Relation*, By John Macmurray. *Int Phil Quart* 2,474-482 S 62. John Macmurray's Gifford lectures on "The Form of the Personal" give an original version of contemporary personalist thought. This second volume of these lectures argues that all forms of theorizing and reflection are acts, uniting both facts and value and never restricted to the allegedly "objective" view of things. Several difficulties with Macmurray's exposition are discussed. First, Macmurray holds human freedom to be self-evident yet does not adequately explain how freedom of action is other than mere indetermination. Secondly, Macmurray's doctrine that scientific thought is abstracted from the idea of personal action requires a new vision of the relation between science and religion which Macmurray does not provide. Finally, Macmurray's treatment of community implies that real community can never be actualized, a doctrine that would, if accepted, destroy all hope of human survival in contemporary socio-political conditions.
- HARRIS, Errol E.** *Revelation Through Reason; Religion In The Light Of Science And Philosophy*. New Haven Yale Univ Pr 1958. The thesis of this series is that religion and science are qualitatively continuous parts of human experience and that a proper understanding of both "leads to a view of the world which... necessitates belief not only in God but in such a God as would justify the main doctrine of Christianity: that Jesus is the revelation in human form of the divine." Not only are science and religion compatible, they comprise a unity which precludes their existing "peaceably side by side accomodated in separate fields." Faith and reason are integral in the progress of knowledge, whose ultimate end is God. Mind and nature are mutual aspects of a single grand evolutionary process which achieves its culmination and consummation in God. The author attempts to show that there is evidence both in natural science and in ethical theory to support his theological evolutionism. In moving toward perfection, man moves toward God; apparent retrogression must be viewed in terms of the total process.
- HARRIS, Errol E** and Prior, A N and Ferrater Mora, José. *The University Of Kansas Lectures: "The Idea Of Man," "Analysis And Insight," And "Changes In Events And Changes In Things"*. Lawrence Univ Of Kansas 1961. Ferrater Mora's paper is devoted to the thesis that man makes his own life—a person constituting himself historically. Harris's lecture is a two-pronged attack on contemporary analytic philosophy. One part of the argument attempts to show that the enterprise is self-refuting, based on an epistemology of naive positivistic empiricism which most of its present proponents have themselves rejected. The other part of the argument is ad hominem, showing the urgent necessity for a synthetic and constructive philosophy which will be able to develop a way of life and system of values capable of stemming the drift toward nuclear self-annihilation. Prior, starting with the MacTaggart-Broad time puzzle and digressing backward through St Augustine, offers an adverbial analysis of time and tenses, based on the theory that there are only things, not events, and that things are present tense, when they are.

HARRIS, Errol E. Ethical Implications Of The Cold War. *Yearbook Of World Affairs* Volume Unknown 1965.

This article proposes to show that while pacifism in world affairs has much to recommend it, it provides no ultimate solution to the problem of peaceful international relations. To eschew the use of force in any circumstances is subject to several criticisms. First, unilateral disarmament removes a nation from international politics by abolishing the main source of its influence, this action is tantamount to a surrender to potential enemies. Secondly, from the moral viewpoint, it is really the spirit of pacifism which is important, not the amount of force which is used or neglected. Thirdly, all political action takes place on the level of force, and a morality of love which is at the basis of pacifism is beyond politics and can be effective only if moral conversion to love is universal. Rather than advocate pacifism and the abolition of all political authority, it is suggested that political power be somehow internationalized.

HARRIS, Errol E. Goodness, Duty, And Human Nature. *Yale Review* 489-495 Spr 62.

The important ethical work of Brand Blanshard, *Reason and Goodness* is seen as invaluable examination of the crucial moral question, "What imposes on me the obligation to forego that which my wishes urge me to acquire?" Blanshard's book is not only a critique of contemporary ethical writings, but a constructive study of ethical concepts, a systematic exposition of the sources of moral goodness and obligation, and a description of the significance of thought in the exercise of human capacities. Blanshard could have set out the kernel of his own position in more a direct fashion rather than leaving his conclusion implicit. But *Reason and Goodness* is a monumental achievement in the study of moral philosophy.

HARRIS, Errol E. Political Power. *Ethics* 68,1-10 O 57.

This article proposes to show that no political power can be exercised without some measure of consent and acceptance by the governed. The service of the common good to an extent sufficient to ensure this consent is seen as a condition inherent in the very nature of political power. Sheer force is shown to be incapable of keeping a people in subjection indefinitely. The instruments of force are available to those with political power, only by the cooperation and/or acquiescence of their subjects. Therefore, political power is always ultimately the power of the people and if the masses realized that they were the instruments of this power, tyranny could always be prevented.

HARRIS, Errol E. Selfhood And Godhood. *Phil Rev* 67,538-545 O 58.

In his book *On Selfhood and Godhood*, C A Campbell gives a penetrating and meticulous discussion of major philosophical problems, such as the ontological status of the self, the freedom of the will, the objectivity of moral obligation and the bearing of evil on belief in the existence of God. Campbell argues incisively that the self is spiritual in character and conceivably exists without a body. This, however, involves him in insuperable difficulties. Rather than view mind and body as separate entities related externally, it would be better to see them as different levels of the same continuous process. Campbell neglects the doctrine of degrees. He defends freedom, on the ground that we can will against our formed character. This restricts free action only to exceptional cases and leaves the major portion of human conduct subject to determinism. He advocates a suprarational theism which is impossible to defend by rational argument and which this writer rejects. The philosophical importance of the book, despite its difficulties and defects, is undeniable.

HARRIS, Errol E. Teleology And Teleological Explanation. *J Phil* 56,5-24 Ja 59.

The paper reinterprets the conception of teleology. It seeks to show that both mechanists (e.g., Braithwaite and Nagel) and organismic theorists (like Haldane and Bertalanffy) presuppose that in organic and purposive behavior the whole determines, and provides the principle of explanation of the part—in temporal processes the mature explains and determines the rudimentary—and not vice versa. This is what teleology properly should mean, and not "goal-seeking," or backwards causation. If so understood the criticisms of teleological explanation tell only against those based on an inadequate, superficial and inappropriate sense of teleology for which the one above should be substituted if the conception is to become scientific.

HARRIS, Errol E. The Philosophy Of Nature In Hegel's System. *Rev Metaph* 3,213-228 D 49.

Those who see an internal contradiction in Hegel's philosophy, allege that the dialectical transition from the Logic to Nature is spurious and unnecessary. What they fail to recognize is that the whole dialectic is a process of continuous development of self-consciousness, constantly turning back upon its earlier phases, as object. The Philosophy of Nature is a further stage of the dialectical movement of thought and not a simple development of part of the Logic. The mind, having found its own identity with the world as knowledge, goes back to the world as Nature to view itself as the process in and through which consciousness is generated through organism. It is the phase of philosophy in which the mind discovers its own immanent presence only in Nature.

HARRIS, Errol Eustace. *The Foundations Of Metaphysics In Science*. NY Humanities Pr 1965.

In this work, the first of two volumes, Harris attempts to explicate the world-view implicit in modern science. The second volume, adumbrated at the conclusion of this study, will develop a philosophical synthesis consistent with this world-view. The survey of science, which occupies the bulk of the book, is a masterful *tour de force* which stresses the striving of every level of reality toward completion on a higher level.

HARRIS, Errol. Thought And Action. *Rev Metaph* 12,449-461 Mr 59.

In this refreshingly instructive first volume of John MacMurray's Gifford lectures, the main contention is that our failure hitherto to recognize the primacy of the practical in determining the form of the personal (and our neglect to develop our philosophy in terms of this form) has led to a social and intellectual crisis. MacMurray's claim is that the verification of metaphysical statements depends on the difference the belief in

them makes on our practical way of life. Several problems arise from his doctrine, including those consequent on the isolation in which MacMurray leaves the acting agent, the temporal priority of a knowledge of truth and falsity which he inconsistently requires for any establishment of right and wrong, and the view that the physical world is an object of abstraction and therefore by implication imaginary. It is suggested that we should recognize reason as that which defines an objective standard of truth and value, through which the total system of the real expresses itself as action.

HARRIS, Frederick P (ed). *The Proceedings And Addresses Of The Conference On The Teaching Of Philosophy*. Cleveland 1950.

HARRIS, Frederick P (ed). *The Teaching Of Philosophy*. Cleveland 1950.

HARRIS, H S. *The Social Philosophy Of Giovanni Gentile*. Urbana 1960.

Harris traces Gentile's philosophy of "actual idealism" from its roots in Kant, Fichte, Hegel, and the Italian idealist Bertrando Spaventa to its outworking in Italian fascism. Gentile's theory of the individual and the state is presented by an extensive analysis of his educational theory and his attempts to implement it in fascist Italy. Gentile's thought is weighed, as it deserves to be, for its philosophic merit.

HARRIS, H S. Thematic Philosophy. *Rev Metaph* 11,441-445 Mr 58.

HARRIS, H S. Hegelianism Of The 'Right' And 'Left'. *Rev Metaph* 11,603-609 Je 58.

HARRIS, H S. Review Of Periodical Literature On Hegel. *Monist* 48,129-132 Ja 64.

HARRIS, H S. The Legacy Of Hegel. *Monist* 48,112-128 Ja 64.

Hegel is examined in light of Royce's thesis that idealism is concerned not primarily with whether the being of things is a being in the mind of some thinker, but with whether the essence of anything makes a difference to its existence, whether it is any part of the essence of a thing that it exists. "If the actual world is rational, then any claim to have discovered the pattern of that rationality can and must be tested in action." The question conventionally formulated "whether things depend on mind or vice versa" is irrelevant, as is criticism such as Moore's "refutation of idealism."

HARRIS, Julian (ed). *The Humanities: An Appraisal*. Madison WI Univ Of Wisc Pr 1950.

HARRIS, Marjorie S. *Francisco Romero On Problems Of Philosophy*. NY Philosophical Lib 1960.

HARRIS, Marjorie S. A Transcendent Approach To Philosophy. *Phil Phenomenol Res* 15,394-401 Mr 55.

HARRIS, Marjorie S. Philosophy For Tomorrow. *Phil Phenomenol Res* 24,573-579 Je 64.

The work of Francisco Romero is noted, especially his thought that philosophy will be oriented in the direction of transcendence. Characteristics of transcendence are objectivity and universality and spirit. The article ends by advocating humanism, which takes into account the fundamental interests of man.

HARRIS, Marjorie S. Symbolic Logic And Esthetics. *J Phil* 37,533-546 S 40.

HARRIS, R Baine (ed). *The Significance Of Neoplatonism*. Norfolk VA Int Soc Neoplat St 1976.

This book is Volume I in the projected series *Studies in Neoplatonism: Ancient and Modern*. It contains sixteen separate articles, each written by a different author, including one which is a brief introductory description of Neoplatonism. Part One of the book has three articles on the source of Neoplatonism; Part Two is devoted to the interpretation of Neoplatonism and consists of ten articles, and Part Three has five articles on the influence of this school on later philosophers. This latter section includes articles on Whitehead and Sartre. There is some bibliographic information following each article and the book is indexed.

HARRIS, Robert T. *Social Ethics*. Philadelphia Lippincott 1962.

This is an introductory book on social theory. Professor Harris calls for a renewed awareness of social values and of their importance and function. He draws upon John Stuart Mill, Rousseau, and Kant in making his case for individualism and, more especially, for individual search for values in the face of the growing need for organization in our increasingly complex world. Among other topics, he examines how our images of alien peoples are imposed upon us, using American views of the Chinese as illustration. He compares communism to capitalism and totalitarianism to democracy and sets forth the responsibilities that go with a liberal democracy.

HARRIS, Zellig Sabbettai. *Methods In Structural Linguistics*. Chicago Univ Of Chicago Pr 1951.

A set of analytic methods sufficient to obtain the grammar of a language out of the data of a large corpus of its sentences is discussed in this book. The methods show how a grammar is obtained purely on the basis of the relative occurrence of segments, ultimately of arbitrary segments, in the sentences of the corpus. The book ends with a characterization of the grammar of a language as a theory of its structure.

HARRIS, Zellig. *Mathematical Structures Of Language*. NY 1968.

The book is a study of the mathematical properties of language, and of the combinatorial, stochastic, and algebraic structures which characterize its phonemics and structural entities, and its syntactic and transformational relations. The book presents syntactic characterizations of ambiguity, paraphrase, metalanguage,

- reference, discourse, and sublanguages. It ends with an abstract system sufficient for natural language, and with a discussion of the structural differences between language and the set-theoretic systems of logic and mathematics.
- HARRISON, Bernard.** *Form And Content.* NY Barnes & Noble 1973.
- HARRISON, Bernard.** *Meaning And Structure: An Essay In The Philosophy Of Language.* NY Harper 1972.
- Harrison develops a systematic general theory of the nature of the conventions governing the semantics of natural language. He discusses philosophy, psycholinguistics and linguistics in creating his "theory of linguistic devise." This theory develops out of a thorough attack on the "Empiricist Theory of Language." Harrison amplifies his theory with discussions of vagueness, synonymy, cognitive discourse, use, usage and category. He attacks the hypothesis of logical necessity often entertained in traditional discussions of ungrammaticalness.

- The central theme of the meetings was: "The Role of Philosophy in the Catholic Liberal College." Other general topics discussed were: "Logic and Method," "Philosophy of Nature," "Metaphysics," "Moral and Political Philosophy," "History of Philosophy," and "Philosophical Problems."
- HART, Charles A.** *Thomistic Metaphysics, An Inquiry Into The Act Of Existing.* Englewood Cliffs NJ Prentice-Hall 1959.
- Monsignor Hart, longtime professor of philosophy at the Catholic University of America, died shortly after the publication of this book. His textbook treats the usual topics in the metaphysics of Aquinas: the analogy of being, principles and causes of being, substance and accidents, hylomorphism, the transcendentals. In the last chapters, on evil and beauty, one finds the author giving more expression to his personal thinking. The style is simple and clear—very difficult or intricate problems are not discussed at length. Some recent developments in Thomism are included: the act of existing is emphasized, something is said about the judgment of separation and the third degree of abstraction, the finality of being is stressed. Documentation is limited, consisting chiefly of references to Thomas Aquinas and a few contemporary Thomists. There is an Index but no formal bibliography is given.

- HART, Ray L.** The Imagination In Plato. *Int Phil Quart* 5,436-461 S 65.
- Four views of the imagination in the Platonic corpus are discriminated. The fourth is defended as that of the "mature" Plato. (1) The imagination is *aesthesis*, the undifferentiated awareness of phenomena. (2) The imagination is *mimetic, phantastic, and sophistic*. Thrice removed from real being, it copies appearances with a view to stimulating passions and so involves a false claim to cognition. (3) Imagination is necessary for the cognition of some real structures. *icastically*, it expresses non-imaginal apprehensions in lively figure; *dianoetically*, it makes accessible through specific images essentially rational structures otherwise inaccessible. (4) Imagination is the mental form of maximum cognitive participation in "process." Directed toward "becoming," imagination intends the order of things and events in their concreteness.
- HART, Samuel L.** *Ethics: The Quest For The Good Life.* NY Philosophical Lib 1963.
- The type of ethics elucidated here comprises three interrelated aims: an integration of empirical findings of the various studies of man, a clarification of the moral terms and their implications, and a projection of a feasible, better state of affairs. Rejecting the prevalent dichotomy between factual and value judgments, the author argues for an objective ethics based on man's bio-psychological oneness. The various behavioral sciences point to common, shareable vital values which properly interpreted reveal the nonrational character of any tribalistic, ethnocentric morality.
- HART, Samuel L.** *Treatise On Values.* NY Philosophical Lib 1949.
- The book comprises two parts. The first discusses the nature of values in general, the second deals with aesthetic, moral, and religious values, and values and the creative process. The author follows the pragmatic, naturalistic approach which leads him to rejection of both value Platonism or realism, and value emotivism of logical positivism. A study of values in naturalistic terms shows that values are rooted in facts, and play an important, functional role in sustaining and enhancing life. On a nonreflective level feeling permeates our value experience, on a reflective level reason becomes predominant, and helps us to distinguish between mere imputed, subjective values, and objective, discovered values.
- HART, Samuel L.** The Nature And Objectivity Of Ethical Judgments. *Phil Phenomenol Res* 15,360-368 Mr 55.
- The paper criticises the value emotivism. The emotive meaning, the central theme of logical positivism, turns upon analysis to be vague, almost vacuous. In the light of psychological studies of feelings we learn that emotions are connected with conations and cognitions. Equally critical is the author of predominant ethical relativistic trends which are predicated on an artificial separation of facts and values. The prevailing commonness of human nature (biological and social) discloses universal, desirable ends which make for a rational, axiological dialectic.
- HARTIGAN, Richard S.** Saint Augustine On War And Killing: The Problem Of The Innocent. *J Hist Ideas* 27,195-204 Ap-Je 66.
- The author believes that with the advent of nuclear weapons, increasing numbers of theorists are analyzing the notion of just war. He seeks the origin of many of these Christian theories in Augustine. He finds that Augustine exhibits an unexpected degree of harshness on the fate of the innocent in war. Augustine attempts to reconcile war with the Christian ethic of love, and in so doing seems blind to problems of inconsistency. The author concludes that Augustine remains unaware of the incongruity between his private ethic of love, and his public ethic of just war.
- HARTLAND- SWANN, John.** The Logic Of 'Knowing Jones'. *Phil Stud* 8,1-6 1957.
- This article gives an analysis of the logical behavior of 'know' when it occurs in the context of knowing a person. The author attempts to reduce this function of knowing to a subcategory of knowing *how* (e.g., knowing how to recognize), and thus to find some translation of 'know', in the sense of knowing a person, which does not apply to 'know' in some other sense. He suggests from the latter analysis three implications of 'I know Jones': a) I am able to make certain correct personal statements about Jones, b) I am able to recognize him in favorable circumstances, and c) I have actually had dealings of a certain kind with him in the past.
- HARTLEY, R V L.** A Mechanistic Theory Of Extra-Atomic Physics. *Phil Sci* 26,295-309 O 59.
- HARTMAN, Geoffrey H.** *The Unmediated Vision: An Interpretation Of Wordsworth, Hopkins, Rilke, And Valery.* New Haven Yale Univ Pr 1954.
- Poetry is frankly regarded by the author as a mode of knowledge; as such, it presupposes a mediating principle, by means of which the mind, in a poetic act reducing experience to meaning, is able to overcome the "tyranny" of the senses. But the dissipation of "tradition," the unavailability of mediating symbols, as once Christianity afforded, has left the modern poet experience only with which to mediate experience; perception itself must somehow be rendered creative of an order at once mimetic and synthetic. It is as venturers in such "unmediated" (i.e., self-mediated) vision that the subjects of Mr Hartman's study are taken; he interprets their work with sensitivity and craft.
- HARTMAN, Robert S.** *The Structure Of Value: Foundations Of Scientific Axiology.* Carbondale S Illinois Univ Pr 1967.
- This book is an attempt to create a logical framework for a systematic classification and analysis of value judgments. In this process, the author makes use of elementary combinatorial analysis and Cantor's theory of the infinite. He attempts to provide an "axiometrics" or calculus of value whereby values may be measured and compared, even added, subtracted, multiplied, and divided. Central to this analysis is his

treatment of value as a property of sets of predicates rather than as a property of objects themselves. Hartman distinguishes three basic forms of value—the "extrinsic" (where a thing is not considered in its individuality but as an instance of a type or in a role, for example, as a good watch), the "intrinsic" (where a thing is considered in its uniqueness, for example, as a sincere man), and the systematic (where things are considered in classes according to their interrelations, pattern, or ordering). A portion of the book is spent examining earlier attempts at the analysis of value, with special consideration accorded to Moore.

HARTMAN, Robert S. A Logical Definition Of Value. *J Phil* 48,413–419 Je 51.

"Good" is analyzed as being an axiological term rather than an ethical term. The author discusses his position using the distinction between intrinsic and extrinsic goodness. He approximately defines goodness with the statement, anything is good if it is what or as it is supposed to be.

HARTMAN, Robert S. Axiology As A Science (A Rejoinder). *Phil Sci* 29,412–433 O 62.

HARTMAN, Robert S. Group Membership And Class Membership. *Phil Phenomenol Res* 13,353–370 Mr 53.

HARTMAN, Robert S. Prime Number And Cosmical Number. *Phil Sci* 9,190–196 Ap 42.

HARTMAN, Robert S. Prolegomena To A Meta-Anselmian Axiomatic. *Rev Metaph* 14,637–675 Je 61.

The author argues that Anselm's proof of God in the *Proslogion* is the first and so far the last example of an entirely new philosophical method which is neither categorical not analytic but axiomatic and synthetic: the method of mathematics validly applied to the highest possible subject of human thought. With particular reference to Karl Barth's 1958 study, *Fides Quaerens Intellectum*, he first reconstructs Anselm's theological program. He then discusses Anselm's notions of rationality and proof and presents his axiomatic concept of the name of God. Finally, the author examines the argument between Anselm and Gaunilo step by step.

HARTMAN, Robert S. Research In The Logic Of Value. *Main Currents* 8,76–77 S 51.

HARTMAN, Robert S. Risieri Frondizi On The Nature Of Value. *Phil Phenomenol Res* 22,223–232 D 61.

In Frondizi's thought, the discovery of value is equal to the discovery of Being. Values are not material, ideal, things, insights, essences; they are non-real qualities. Values do not exist; they hold good or are worth. They involve polarity and hierarchy. It is pointed out that Frondizi must overcome the antithesis between subjectivism and objectivism. It is concluded that philosophy must further do formal axiology (Husserl) or deal with the relation between description and value (G E Moore). There must be an investigation of formal relations between sets of qualities describing facts and sets of qualities constituting values.

HARTMAN, Robert S. The Epistemology Of The A Priori. *Phil Phenomenol Res* 9,731–736 Je 49.

HARTMAN, Robert S. The Logic Of Description And Valuation. *Rev Metaph* 14,191–230 D 60.

The author's purpose is to state with precision both the sense in which natural predicates "describe," while value predicates do not, and the sense in which value predicates "follow from" descriptive ones. He first defines "good," "fair," "bad," and "no good" in terms of the intensional properties shown or not shown by particular things construed as class members. Then, after presenting the arithmetic determination of value, he argues that the set of descriptive predicates which determine a thing as fact also define its goodness and so determine it as value. Finally, he discusses at length the formal relations among value terms.

HARTMAN, Robert S. The Logic Of Value. *Rev Metaph* 14,389–432 Mr 61.

Formal axiology is the study of the pure form of value; its axiom is that value is the degree in which a thing fulfills the attributes contained in the intension of its concept. The author's purpose is to elucidate the axiometric structure of intension. To this end, he examines systemic, extrinsic, and intrinsic value, which have their own logics and are respectively characteristic of technical, social, and poetic language. He then discusses disvalue and the logic of the absurd. Finally, the author applies these concepts and analyses to an illustrative situation.

HARTMAN, Robert S. The Logical Difference Between Philosophy And Science. *Phil Phenomenol Res* 23,353–379 Mr 63.

The purpose is to determine logically the difference between philosophy and science. It is concluded that the fundamental logical difference is: In the analytic concepts of philosophy intension and extension vary inversely whereas in the synthetic concepts of science they vary directly. The scientific concept is the ideal limit of the more and more intensive specification of philosophical concepts.

HARTNACK, Justus. Knowledge Of The Future. *Phil Stud* 10,89–96 1959.

The author goes into the problem of induction pointing to what he sees as an important difference between a prediction in accordance with science and a prediction based on repeated instances. There is a reason to adhere to the principle

of repeated instances, he argues, for repeated instances suggest the existence of a law or a theory. He concludes that the reason one may, on the basis of repeated instances, infer what the next instance will be like is that one may believe (or in some cases know) that there is an explanatory scientific theory.

HARTSHORNE, Charles. *A Natural Theology For Our Time*. La Salle IL Open Court 1967.

This is revised version of the Morse Lectures. It is argued here that the appropriate understanding for our time of God is that which Hartshorne has urged for some time: God's eternal nature is unchanging and perfect, etc., but He is also concrete and as such interacts with the world and grows in perfections. This neo-classical theism is held to be unaffected by the usual criticisms of the theistic proofs, so that ontological, cosmological, teleological and experiential arguments in its support are successful. But such arguments are, it is held, aimed solely at displaying the coherence and clarity of the idea of God, thereby removing the confusions which make the non-theist a non-theist. The main argument closes with contentions that neither morality nor science are truly feasible without supporting religious faith, and the objection based on evil in the world is not a successful one. In an epilogue Hartshorne considers the relation of neo-classical theism to the views of R Bullmann. The volume constitutes summary presentation of Hartshorne's neo-classical theory.

HARTSHORNE, Charles. *Anselm's Discovery: A Re-examination Of The Ontological Proof For God's Existence*. Lasalle, IL Open Court 1965.

Conceding that the so-called ontological argument of *Proslogium II* may rightly incur the familiar criticisms of Gaunilo or Kant, Hartshorne urges that the argument of *Proslogium III* (which turns on the principle that not to be conceivable as non-existent is greater than to be so conceivable) was a major philosophical discovery. The book traces the long story of medieval and modern criticisms of Anselm, exhibiting the repeated failure of the critics to distinguish the two forms of the argument. It also urges that the acceptance of the stronger (and modal) form of the argument should lead us (beyond Anselm) to the "neo-classical" understanding that the God who necessarily exists and is not surpassed by any other individual may increasingly surpass himself: thus the process philosophy of universal creativity.

HARTSHORNE, Charles. *Aquinas To Whitehead: Seven Centuries Of Metaphysics Of Religion*. Milwaukee Marquette Univ 1976.

Hartshorne, "an anti-Thomist Thomist," argues for the superiority of process theology to the classical Western theologies from Aristotle to Kant, indicating early seeds of a metaphysics of process in Plato, the Socinians, Spinoza, and Leibniz. Whitehead is presented as taking basic insights from Spinoza, Leibniz, and Hume as grounds for his conception of the dual transcendence of God: as a primordial divine nature, infinite, free, complete, eternal, actually deficient, and unconscious, and a consequent divine nature, determined, incomplete, incorruptible, fully actual, and conscious.

HARTSHORNE, Charles. *Creative Synthesis And Philosophic Method*. La Salle IL Open Court 1970.

HARTSHORNE, Charles. *Man's Vision Of God And The Logic Of Theism*. Chicago Willett Clark 1941.

The vision of God as disclosed by the author is an intellectual masterpiece. In a thorough piece of thinking, he adds exactitude and logical rigor to the subject of the Supreme Being. He shows how the question of there being a supreme being can be answered by philosophic reason according to strict rules of formal logic. Combining religious insight and logical precision Hartshorne supports the religious idea of God in contrast to what has passed as orthodox theology. The work is a unique attempt to realize the philosophic power inherent in the genuinely religious conception.

HARTSHORNE, Charles. *Reality As Social Process, Studies In Metaphysics And Religion*. Glencoe IL Free Pr 1953.

HARTSHORNE, Charles. *The Divine Relativity, A Social Conception Of God*. New Haven Yale Univ Pr 1948.

The volume's main thesis, called Surrelativism, is that the "relative," or changeable, includes within itself and in value exceeds the nonrelative, immutable or "absolute," as the concrete includes and exceeds the abstract. God is conceived as a supremely excellent and concrete Being. The personal interpretation of deity is reconciled with the requirements of philosophic reason. It is a plea, but not "special pleading," for a keener consciousness, on the part of Christians, of their social obligations.

HARTSHORNE, Charles. *The Logic Of Perfection And Other Essays In Neo-classical Metaphysics*. La Salle IL Open Court 1962.

This is an argumentative book. The heart of it is a long examination of the meaning and validity of the Ontological Argument. As a result of this examination, those forms of the argument which have been commonly criticized are rejected, while certain other forms of the argument are not only accepted, but are shown to imply forms of being, of participation, and of creativity, which are sharply contrasted with the traditional conception of 'substance'. Hence the book is also a detailed criticism and rejection of most traditional metaphysics and of most of the refutations of metaphysics. By adopting the neo-classical position, Hartshorne argues skillfully that theism is the only integral philosophy which can justify the premise, needful to the ontological argument, that a creative perfection is possible.

HARTSHORNE, Charles. *Whitehead's Philosophy: Selected Essays, 1935–1970*. Lincoln U1972.

HARTSHORNE, Charles. A Critique Of Peirce's Idea Of God. *Phil Rev* 50,516–522 S 41.

HARTSHORNE, Charles. Absolute Objects And Relative Subjects: A Reply. *Rev Metaph* 15,174–188 S 61.

Responding to Francis H Parker's 1960 review of *Philosophers Speak of God*, the author discusses six questions: the ontological priority of relativity or becoming over absoluteness or being; the dependence of reality upon God's knowledge of it; the view that things necessarily enter into the constitution of knowledge; the validity of the ontological argument of Anselm and Descartes; the possibility of passing from the Law of Contrast or Polarity, taken as a principle of meaning, to conclusions about reality as independent of thought; and the reviewer's assertion that the author confuses quantitative greatness and quality or value.

HARTSHORNE, Charles. Abstract And Concrete In God: A Reply. *Rev Metaph* 17,289–295 D 63.

Professing to find passages in Julian Hartt's 1963 review of *The Logic of Perfection* obscure or misleading, the author attempts to clarify his concept of God and his position on the ontological argument. In his discussion he remarks on the notions of efficient cause, being and becoming, necessary and contingent existence, the abstract and the concrete, divine memory, love, and freedom, and the relationship between God and the world.

HARTSHORNE, Charles and Johnson, A H and Lowe, Victor. *Whitehead And The Modern World: Science, Metaphysics, And Civilization*. Boston Beacon Pr 1950.

HARTSHORNE, Charles and Johnson, A H and Lowe, Victor. *Whitehead And The Modern World: Science, Metaphysics, And Civilization: Three Essays On The Thought Of Alfred North Whitehead*. Boston Beacon Pr 1950.

Whitehead's chief contribution to the philosophy of natural science was his method of "extensive abstraction" for defining ideally exact concepts such as points in terms of relationships perceptually evident. Such definitions are called for if the relational theory of space is taken seriously. The method is explained and defended against some standard criticisms of it. Whitehead's approach to causality and induction is touched on, as another example of his unusual approach to the foundations of natural science. No sharp separation of his philosophy of science from his metaphysics is finally possible.

HARTSHORNE, Charles. From Colonial Beginnings To Philosophical Greatness. *Monist* 48,317–331 Jl 64.

The American colonists neglected the fine arts and theoretical sciences, but not religion, political thought, or philosophy. Early North American thought considered chiefly religious and political problems, but late in the last century scientific inquiry began to flourish and this eventually enabled our country to produce a more balanced and adequate philosophy, in some respects not equaled abroad. Recently an "inverted snobbery" has put us in some danger of neglecting our heritage, also of adopting certain philosophical tenets remarkably similar to those of Marxism. Whitehead's philosophy is viewed as in some respects the climax of the classical period in American philosophy, though needing correction or further development in the light of current insights and needs.

HARTSHORNE, Charles. Is The Denial Of Existence Ever Contradictory? *J Phil* 63,85–93 F 66.

This article examines criticisms of the ontological argument proposed by Plantinga and Alston. The conclusion is reached that the denial of existence can be contradictory if this denial implies that the ground of all possibility is itself but a mere possibility, or that an indispensable predicate—one whose actualization or being instantiated is necessary to reality as such—is yet dispensable. It is conceded that the argument is a proof for the divine existence only on the assumption that the idea of God is logically admissible, and not an absurdity. It is also shown that the argument need not beg the question by assuming from the outset a subject of predication, God, but can argue rather from the predicate divine and deduce from this predicate the necessity of its instantiation in some suitable actuality.

HARTSHORNE, Charles. Present Prospects For Metaphysics. *Monist* 47,188–210 Wint 63.

The significance of the article is that metaphysics is proposed as a real possibility for modern philosophy—especially process philosophy. Hartshorne points out the biases of classical metaphysical systems, as favoring being over becoming, identity above diversity, absolutism in opposition to relativism, the non-physical in preference to the physical, and the origin of events without regard to results. Modern (neoclassical) metaphysics must therefore become involved with becoming and relativity. By such a consideration of becoming, relativity and relations, many of the classical problems are considered to be resolvable—such as individuality, determinism and God. The article also indicates various problems facing contemporary neoclassical philosophy.

HARTSHORNE, Charles. Real Possibility. *J Phil* 60,593–605 O 63.

A described state of affairs is logically possible if the description makes sense and involves no contradiction. For the description to be really possible, the minimal further requirement is that it violate no universally valid law of nature. The theory put forward here is one of the ultimate coincidence of real and logical possibility. It is argued that it is only because of lack of clarity or definiteness that really impossible descriptions appear to us logically possible. If we had a perfect command of our ideas we should see the logical absurdity in any description that is really impossible.

HARTSHORNE, Charles. Santayana's Defiant Eclecticism. *J Phil* 61,35–43 Ja 64.

This is a criticism of Santayana's philosophy and of his procedure of doing philosophy. That philosophy is perhaps most of all a sharp reaction to modern idealism. However, although he rightly dismisses one form of idealism, Santayana overlooks the more sensible form represented by Peirce. Moreover, it is argued, Santayana's alternative to idealism is based upon mistakes, explains nothing, and is itself unintelligible. Similar criticisms are directed at Santayana's rejection of Platonism and theism. It is suggested that Santayana's chances of finding viable alternative philosophies might have been better had he been less easily satisfied with the defiant pose of saying the opposite of his teachers and masters.

- HARTT, Julian** and Auer, Johannes Abraham Christoffel Fagginger. *Humanism Versus Theism.* Yellow Springs OH, Antioch Pr 1951.
- This volume contains a debate between two religious thinkers on the key questions: Can faith rest on scientific knowledge alone? Is it religion if it lacks God? What can a reasonable man believe? Mr Auer speaks for humanism, and Mr Hartt speaks for the theist point of view. These two viewpoints are vigorously applied to the question: Can man put his entire faith in Man, or must he have God?

- HARTZ, Louis.** *The Liberal Tradition In America, An Interpretation Of American Political Thought Since The Revolution.* NY Harcourt Brace 1955.
- This volume chances to be an excellent companion study to Clinton Rossiter's *Conservatism in America.* Professor Hartz of Harvard finds the key to American liberalism to be (following de Tocqueville) the absence of the need for a democratic revolution against feudalism, resulting in the "irrational Lockianism" which has made Marxism relatively impotent. "Lacking Marxists to fight, the New Dealers looked much like the Marxists themselves," when they were actually pragmatists departing from Locke. Because of the narrowness of its political spectrum, America has never understood itself, and "must look to its contact with other nations to provide that spark of philosophy, that grain of relative insight, that its own history has denied it."

- HARWOOD, E C** and Handy, Rollo. *Useful Procedures Of Inquiry.* Great Barrington MA 1973.
- The book contains a critical section on the nature of scientific inquiry and also analyses critically several inquires in various fields of behavioral science. Emphasized throughout the book, and further developed, are the transactional procedures of inquiry described by John Dewey and Arthur F Bentley in their book, *Knowing and the Known.* The full text of *Knowing and the Known* is reprinted in the volume, as is Joseph Ratner's "Introduction to John Dewey's Philosophy." There is an appendix on terminological problems in philosophy and the behavioral sciences.
- HARWOOD, E C** and Handy, Rollo. Transactional Procedures Misunderstood. *Amer J Econ Social* 34,103-111 1975.
- The views of John Spiegel (in his *Transactions: The Interplay Between Individual, Family, and Society*) are critically reviewed. Spiegel, although sometimes disagreeing with the transactional procedures of inquiry developed by Dewey and Bentley, believes that many important human problems are best investigated by using those procedures. The authors argue that in some instances Spiegel has not fully understood Dewey and Bentley, and they reconsider some of the major differences among self-actual, interactional, and transactional procedures of inquiry.

- HASSEL, David J** and Yartz, Frank J and Larson, Allan L. *Progress And The Crisis Of Man.* Chicago Nelson-Hall 1976.
- Progress and the Crisis of Man* proceeds from concrete examples of progressiveness to a delineation of parameters within which a philosophy of progress is to be considered. Philosophers studied include Plato, Russell, and Marx. The book stresses that a philosophy of progress must be considered in the light of the social nature of man. *Technological progress* is considered with the recommendation that its value to man must be possessed to insure man's best control over his environment. *Secularism* is studied as a possible value orientation in the cultural development of an individual. One's value orientation not only determines the way one lives, but also influences those with whom one must relate.

- HAUERWAS, Stanley.** *Character And The Christian Life: A Study In Theological Ethics.* San Antonio Trinity Univ Pr 1975.
- This book suggests that Protestant ethics still places too much emphasis on commands issuing from God's will. Hauerwas argues forcefully that the focus should turn to character, which means "the self's duration, growth, and unity." To develop this theme he studies in successive chapters the views of Aristotle/Aquinas, Bultmann/Barth, and Calvin/Wesley. His own thinking on the "self as agent" is best developed in the third chapter. Character is pictured as important to a doctrine of sanctification.
- HAUGHT, John F.** *Religion And Self-Acceptance.* NY Paulist Pr 1976.
- This book is an introductory essay in the philosophy of religion. It attempts to deal with the question of the truth-status of religious convictions in a new way. Starting from a presentation of the dynamic, intentional nature of human consciousness as a desire to know, it asks whether and how religious feelings, stories, symbols, ideas, actions etc., relate to the human desire to know. If religious acts promote the interests of the desire to know they may be said to have a fundamental truth-value. Where some other desire than the desire to know lies behind religious consciousness, the latter may be called illusory.
- HAUSER, Philip M.** Social Science And Social Engineering. *Phil Sci* 16,209-218 Jl 49.
- HAUSMAN, Carl R.** Art And Symbol. *Rev Metaph* 15,256-270 D 61.
- The author approaches the conflict between art and philosophy by focusing on the questions whether and how art is symbolic. After examining the semiotic and Jungian concepts of symbol, he argues that the work of art is constitutively symbolic and that its meaning is therefore unique. The author then contends that the way of being of art conflicts with philosophic thought in that art concretely and immediately exhibits three fundamental traits of reality, namely, autonomy, individuality, and creativity. In abstraction, these meanings may be objects of symbolically mediated philosophical contemplation.
- HAUSMAN, Carl R.** Intradition: An Interpretation Of Aesthetic Understanding. *J Aes Art Crit* 22,249-262 Spr 64.

- HAUSMAN, Carl R.** Mechanism Or Teleology In The Creative Process. *J Phil* 58,577-583 S 61.
- This paper compares two approaches to the creative process: the mechanistic, represented by Vincent Tomas, and the teleological, represented by Eliseo Vivas. The author shows the weakness of the mechanistic theory and defends the teleological view, while contending that neither interpretation constitutes an adequate explanation of creativity because it is doubtful whether a rational account of creativity is possible.

- HAUSMAN, Carl R.** The Existence Of Novelty. *Phil Forum (Pacific)* 4,3-60 F 66.
- HAUSMAN, Carl R.** Understanding And The Act Of Creation. *Rev Metaph* 20,88-112 S 66.
- Arthur Koestler argues in *The Act of Creation* (New York, 1964) that all creative thinking follows the same basic pattern of bisociation. Assessing Koestler's study, the author here concludes that while his suggestive work is heuristically valuable its thesis is limited. (1) It does not offer a consistent characterization of originality. (2) Whether or not Koestler's thesis commits him to a derterminism remains unclear. (3) Whether Koestler intends bisociation as an explanation or a description of creativity is uncertain. Finally, the author argues that a development of the unexamined teleology implicit in Koestler's thesis would provide a more comprehensive theory.
- HAUSMAN, David B.** What Is Natural? Persp In Biol And Med 19,92-100 Autumn 75.
- It is one thing to identify a certain condition as a disease and quite another to say what is disease itself. The equivocal character of this concept, however, stems from a number of other equally ambiguous notions, one of the most important of which is that of *the natural*. In this paper I have the limited objective of getting clear on the natural/unnatural dichotomy as it stands in the biomedical sciences. Thus, I trace it to what I take to be its Aristotelian origins and develop its influence on contemporary medicine.
- HAUSMAN, Jerome.** Toward A Discipline Of Research In Art Education. *J Aes Art Crit* 17,354-361 Mr 59.
- HAUSMANN, Bernard A.** From An Ivory Tower: A Discussion Of Philosophical Problems Originating In Modern Mathematics. Milwaukee Bruce 1960.
- HAVARD, W C.** Henry Sidgwick And Later Utilitarian Political Philosophy. Gainesville Univ Florida Pr 1959.
- This book is a careful discussion of Sidgwick's views on politics and economics, traced to their basis in his ethics. Sidgwick is rightly treated primarily as a critical thinker who sifted the prevalent views of his time against the background of a common-sense hedonism. In view of this, a good part of Havard's book is devoted to the influence of early utilitarian and positivistic thinking on the "climate" of nineteenth century England.
- HAVELOCK, Eric A.** The Liberal Temper In Greek Politics. New Haven Yale Univ Pr 1957.
- This book is a historical protest seeking to rectify what the author, a classicist, believes to be a forgotten chapter in Greek political history. He deplores the Platonic-Aristotelian monopoly in Greek political thought and argues that the roots of liberalism have been ignored at its own expense. After treating Plato's regressive theory of history, he shows how the concepts of progress and compromise had been developed by such thinkers as Diodorus, Protagoras and Democritus. He concludes with a critical treatment of Aristotle's *Ethics* and *Politics* asserting that they constituted an "emasculatation" of liberalism.

- HAWKINS, D J B.** Being And Becoming: An Essay Towards A Critical Metaphysic. NY Sheed & Ward 1954.
- The author attempts "a critical rethinking of the metaphysics of the Aristotelian and Thomistic tradition." There is no single argument or theme, but rather a series of fairly distinct though interrelated treatments of the main topics of Thomistic metaphysics—being, the thinking of being, analogy, substance, causation, etc.
- HAWKINS, D J B.** Crucial Problems Of Modern Philosophy. NY Sheed & Ward 1957.
- HAWKINS, D J B.** The Essentials Of Theism. NY Sheed & Ward 1949.
- This book aims to show how the logical transition from the world of experience to uncaused being is made and how uncaused being must be an infinite and eternal mind, i.e., God. This volume provides cogent discussion of the existence and nature of God by a process of abstract philosophical analysis and reasoning.

- HAWKINS, David.** The Language Of Nature: An Essay In The Philosophy Of Science. San Francisco Freeman 1964.
- The author holds that there are metaphysical and moral issues in the substance of science, and denies that the positivistic demarcation and sharp delimitation of science and philosophy has succeeded. The fundamental idea of this metaphysics of science is that our ordering relations correspond to discoverable orders in nature. They are not merely our conventions but the language of nature. Different theories of order, such as the teleological theory formulated by Aristotle in biology, and the mechanical theory formulated by Newton in physics, conflicted, particularly since the latter, claiming completeness, postulated temporal reversibility. But chance events, once described as mere disorder, have an order of a different sort, dealt with by statistical laws. "The thermodynamic point of view now appears essential to all sciences concerned with the order and history of nature." On this basis the author argues for a genuine before and after in processes of every sort. He also argues for heirarchical orders in nature.

- HAWORTH, Lawrence.** The Standard View Of The State: A Critique. *Ethics* 73,266-278 Jl 63.
- The standard view of the state appears in two main forms: that of the limited state and that of the prescriptive state. The former view stresses the separation of state and society and the latter the coercive power of the state. This author rejects both theories and questions the assumption that state and society are separate, introducing as an alternative the theory of the discretionary state. The author rejects the notion that coercion is the essential function of the state on the grounds that much legislation is permissive, not prescriptive, and claims that the discretionary state is characterized by an increasing reliance on permissive legislation.
- HAWTON, Hector.** Philosophy For Pleasure. NY Philosophical Lib 1949.
- HAY, Clyde Lemont.** The Blind Spot In American Public Education. NY Macmillan 1950.
- This book deals with the question, Should religion be taught in our public schools? The author believes that a type of religious education can be worked out in harmony with the beliefs of Protestants, Catholics and Jews and in harmony with the Constitution and the law. The "blind spot" in American education is lack of realization of this need. The purpose of the book is to win consideration and support for this element in general education and to trace recent trends of thinking on the subject. The author agrees with Horace Mann that "moral education is a primal necessity of social existence."

- HAY, William H.** John Dewey On Freedom And Choice. *Monist* 48,346-355 Jl 64.
- The common opinion that Dewey held personality to be determined by environment is attacked. An account is given of how Dewey described the development of novel traits of personality. Through the use of intelligence people may gain more freedom of choice. A person can free himself to a degree from acting on impulse, for impulses can both be checked and transformed. This transformation can be produced by repeated acting on ideas entertained. Ideas can come to be more effective on conduct by appropriate reflection. An extensive account of features of reflective experience is presented, drawn from several different sources in Dewey's writings.

- HEIDELBERGER, Herbert.** On Characterizing The Psychological. *Phil Phenomenol Res* 26,529-536 Je 66.
- Two suggestions of Brentano, on characterizing the psychological, are explored: (1) the property of intentionality (which marks the psychological and sets it off from the physical), and (2) that psychological phenomena are characterized by an epistemological immediacy (which is peculiar to them). The author concludes that the second is satisfactory, but the first is not, at least as it is usually interpreted. He argues that criteria of intentionality do not provide us with an adequate characterization of the psychological. Nevertheless, he proposes criteria, adequate to all singular psychological statements, based upon privileged access and self-authentication (knowing a statement without evidence).

- HEIFETZ, Milton D.** *The Right To Die*. NY Putnam 1975.
- This is an attempt to deal with legal, medical, ethical and emotional issues related to death. Asserting that the fundamental moral law is "do not to others as you would not have others do to you," the author argues cogently in defense of a person's moral right to choose death under certain circumstances. This includes the right to request no further medical treatment as well as the right to request assistance in committing suicide. To deny the moral legitimacy of such a choice is to mistakenly make life rather than the quality of life the ultimate norm. While acknowledging that euthanasia is sometimes morally justifiable, Heifetz nevertheless objects to its legalization. His argumentation at this point constitutes the most problematic section of the work. Other issues discussed include the appropriate response to congenital and hereditary defects of the newborn, organ transplants, the definition of death and the need in the United States for something on the order of the British hospice, an institution devoted to aiding people die painlessly.

- HEIN, George E and Hein, Hilde.** The Chemistry Of Noble Gases—A Modern Case History In Experimental Sciences. *J Hist Ideas* 27,417-428 JI-S 66.
- The purpose of this article is to use a current case history of a scientific discovery in order to illustrate some features of the nature of science. A brief history of chemical discoveries is given, and different theories about the character of scientific investigation and interpretation are discussed. The author's conclusion is that many doctrines are accepted long after contrary evidence has been noticed, because they have an appealing aesthetic simplicity. The recent discovery of the chemical reactivity of noble gases provides an interesting case study of what is required before an older theory is altered.
- HEIN, Hilde and Hein, George E.** The Chemistry Of Noble Gases—A Modern Case History In Experimental Sciences. *J Hist Ideas* 27,417-428 JI-S 66.

- HEISENBERG, Werner.** *Physics And Philosophy: The Revolution In Modern Science*. NY Harper 1958.
- The chapters of this book have been read as Gifford Lectures. The emphasis is on quantum theory and its implications for the concept of reality. A chapter is devoted to the history of quantum theory. Then the Copenhagen interpretation with which Heisenberg is associated is given. This is followed by an historical study of atomic theory from the time of the Greeks and a consideration of Cartesian dualism in modern times. Relativity theory is analyzed in its relation to quantum theory to complete the picture. An interesting conclusion is developed by a study of language, natural and technical. Here the status of concepts and their degree of precision are examined. This leads to a consideration of the role of science in its relation to different cultures. A comprehensive introduction by F S C Northrop raises issues about causality.

- HELD, Virginia.** *The Public Interest And Individual Interests*. NY Basic Books 1970.
- Theories of the public interest are arranged in this book into three groups, according to the relations they depict as holding between the public interest and various configurations of individual interests. I examine the concept of individual interest, and construct a scheme of classification for theories of the public interest. I then discuss the theories in the three groups, formalizing the minimal claims within them. I consider the conceptual problems, problems of applicability, and moral problems which, I think, afflict the theories examined, and I suggest an alternative explication of the concept of the public interest. I argue that the concept lies in an area between the "is" and the "ought," that it may be seen from alternative points of view, and that valid judgments applying it can indeed be made.
- HELD, Virginia.** "Civil Disobedience And Public Policy" in *Revolution And The Rule Of Law*, E Kent (ed). Englewood Cliffs NJ Prentice-Hall 1971.
- I consider various definitions of civil disobedience and distinguish four major kinds. My concern in this essay is largely with that kind of civil disobedience in which illegal acts are intentionally and primarily directed at political decisions and policies taken within acceptable law, rather than at the laws themselves, either the one directly violated or some other law. For instance, citizens may use civil disobedience in favor of a wiser political nomination, different budgetary priorities, more efficient public services, or a less insensitive foreign policy, without intending that new laws be enacted. I argue that the grounds for the justification of acts of civil disobedience of this kind, though not of all acts of civil disobedience, are teleological, and I suggest relevant considerations for such justifications.

- HELD, Virginia.** Rationality And Social Value In Game-Theoretical Analyses. *Ethics* 76,215-220 Ap 66.
- Although Robert Paul Wolff is correct to insist on the importance of such game theoretic problems as the "prisoner's dilemma," he wrongly argues that "the game theoretic concept of strategy, with its postulate of value-maximizing monads, cannot helpfully be applied to the problem of realizing social values." Game theory is capable of dealing with non-subjective, non-egoistic values.

- HELM, Paul.** *The Varieties Of Belief*. NY Humanities Pr 1973.
- The author analyses four concepts of religious belief to be found in the writings of philosophers and theologians. The thesis of the book is that attempts to derive philosophically important conclusions from what believers actually say or from the grammar of religious language are vitiated by the lack of uniformity within religious language, as attested by these different conceptions of belief. Such differences are deemed to be important when the meaning of religious language is under discussion, and in particular when the believer is challenged to explain what would count as a falsification of his beliefs.
- HELM, Robert M.** *The Gloomy Dean: The Thought Of William Ralph Inge*. Winston-Salem NC Blair 1962.
- William Ralph Inge became widely known for his criticism of contemporary life between the two world wars. Inge's importance as a philosopher lay in his attempt to establish Christian Platonism as a "legitimate and independent type of Christian theology and practice" within the church, alongside the traditions of authority of Church and Bible. Inge believed that the philosophy of Plotinus embodied the "fullest flowering of the approach to reality (which is) most distinctively Christian." A major section of the book is devoted to an exposition and analysis by the author of Inge's dependence upon Plotinus for an articulation of the Christian faith.

- The articles fall under four headings: "Confirmation, Induction, and Rational Belief," "Conceptions of Cognitive Significance," "Structure and Function of Scientific Concepts and Theories," and "Scientific Explanation." The long new essay, which is a self-contained study of scientific explanation, includes a reexamination of explanation by covering laws, and also considers explanation by statistical laws. According to Hempel, "The central theme of this essay has been, briefly, that all scientific explanation involves, explicitly or by implication, a subsumption of its subject matter under general regularities; that it seeks to provide a systematic understanding of empirical phenomena by showing that they fit into a nomic nexus."

- HEMS, John M.** Learning The Language. *Phil Phenomenol Res* 26,561-577 Je 66.
- A philosophical inquiry into the process of learning a language may help to clarify our understanding of the nature of language itself, which in turn should have some practical bearing upon the manner in which a language ought to be taught. Further inquiry into the relationship which holds between these subjective and objective aspects of the learning process leads to the conclusion that intentional meaning antedates linguistic meaning. In practical terms this shows itself in the fact that many supposed grammatical errors are originally psychological. On the basis of such findings as these, the author attempts to justify the adoption of a much more "direct" method in the teaching of English.

- HEMS, John M.** What Is Wrong With Obligation. *Phil Phenomenol Res* 22,50-60 S 61.
- It is argued here that something is wrong with moral obligation, both theoretically and practically. Obligation represents a failure in love. We cannot have an obligation to love, for obligation is grounded in a failure to love, so that to say that one ought to love would be to say that one ought to have no obligations—but then this is an obligation. It is self-contradictory to say that one ought to have no obligations. It is concluded that here, the language of obligation breaks down.

- This paper attempts to substantiate the claim that many more of Kant's doctrines are philosophically respectable than those acknowledged as such by H. W. Cassirer, in his book *Kant's First Critique*. Attention is confined to the *Transcendental Aesthetic*, that section of the *Critique* considered basic to the entire Kantian position. It is argued (a) that neither in the practice of the sciences nor in the discussions of physical space are there any conclusive arguments against a Kantian position; and (b) that there is, on the other hand, much to be claimed in its favor.

- HENLE, Robert J.** *Method In Metaphysics*. Milwaukee Marquette Univ Pr 1951.
- This is one of the lectures delivered in honor of St. Thomas Aquinas, and called the Aquinas lectures, under the sponsorship of the Aristotelian Society of Marquette University. In this brief volume, Father Henle discusses the problem of the "the passage from sense knowledge to metaphysical knowledge strictly so-called." He does not deal, as he so states in the beginning of his lecture, "directly with the

question of the transcendental applications of metaphysics but rather with the crucial issue of its origin in human knowledge from sense experience."

HENRY, Paul. *Saint Augustine On Personality*. NY Macmillan 1960.

St Augustine, according to Henry, is the first important thinker who has undertaken an analysis of the philosophical and psychological concepts of person and personality, and this shapes Augustine's concepts of God, man, society, family, state, and the Church. Augustine's doctrine of the person is found primarily in the Fifth book of *De Trinitate*. The Aristotelian category of relation is "per se neither accident nor substance but can be either—i.e., relation transcends the categories and may be called a transcendental." "The Father is related in His whole substance to the Son and stands in living relation to the Son, not by any accident but by the very depth of His Fatherly substance, if I may express it in this way. And as the Son is related to the Father, so, too, is the Holy Spirit related to Father and Son, united in One Divine Substance." For Augustine a divine person is at one and the same time 1) "a reality identical with itself, existing in se, an Absolute, and 2) a reality *ad alium*, essentially directed toward another and dynamically directed toward the others."

HENSON, Richard G. What We Say. *Amer Phil Quart* 2,52-62 Ja 65.

The essay is a defense of much of what Stanley Cavell said in "Must We Mean What We Say" against the criticisms of J A Fodor and J J Katz in "The Availability of What We Say"; it isolates twelve of their arguments and replies specifically to most of them. Included is a brief discussion of what they call the "natural language fallacy," i.e., the "mistake of inferring 'ought' statements about distinctions from 'is' statements about what speakers say"; they seem to mean that it is a mistake to think that the distinctions coded in a given natural language are the ones, and the only ones, which a speaker of the language should notice. No one has contended that distinctions so coded are the only ones a speaker should notice; but the claim that one need *not* notice such distinctions is extremely puzzling.

HENZE, Donald F and Saunders, John Turk. *The Private Language Problem: A Philosophical Dialogue*. NY Random House 1967.

A distinction is made between 'Private Language/d1/r'—each word of which refers to experiential data, although each of these words is conceptually independent of publicly observable phenomena, and 'Private Language/d2/r'—a language that only the speaker/user (logically) can understand. A dialogue follows in which a traditionalist maintains that a PL/d1/r is possible and that a PL/d1/r is not necessarily a PL/d2/r. His Wittgensteinian assailant denies both claims. Be denying the legitimacy of nonindependent checks and by insisting that it is impossible for someone who has no concept of persons to speak a pure-experience language, the Wittgensteinian succeeds in demolishing the idea of a private object (or PL/d1/r).

HÉRING, Jean. *A Good And A Bad Government According To The New Testament*. Springfield IL Thomas 1954.

Professor Héring examines the relevant texts of the New Testament "with the purpose of examining whether they furnish a criterion enabling us to distinguish between a government acceptable from a theological point of view and another which is not." The proper clues are not such labels as democracy or communism, but the substance of tyranny and aggression summed up in totalitarianism. Pacifism is rejected in favor of "Peace by force at the service of law."

HERMERÉN, Göran. *Influence In Art And Literature*. Princeton NJ Princeton Univ Pr 1975.

This book is study of the conceptual framework used by scholars and critics in their discussions of influence in art and literature, with a descriptive analysis of the language used in scholarly writings on influence in art and literature. The emphasis is on clarifying the assumptions on which the use of the concept of influence is based, in an attempt to describe the merits and limitations of this approach in comparative research.

HERNADI, Paul. Clio's Cousins: Historiography As Translation, Fiction, And Criticism. *New Literary History* 7,247-257 Wint 76.

The historian selects and constructs from the partial record of "what really happened" that which shall be remembered. Historical narratives share with myths and most literary genres the task of "translating" actual or imagined events into language. Both historiography and narrative fiction interrelate causal and teleological modes of vision through their dual perspective on past events as envisioned by a present consciousness. Yet, whereas narrative fiction demands a distinction between narrator and implied author, historiography precludes it. The

historian's duty to interpret documents and to judge the significance of what is documented in turn allies him with the literary critic.

HERNADI, Paul. Dual Perspective: Free Indirect Discourse And Related Techniques. *Comparative Literature* 24,32-43 Wint 72.

Plato's threefold classification of literary discourse in the Republic as authorial diegesis, dramatic mimesis, and mixed speech serves as the starting point for an examination of the dual narrative perspective characteristic of modern fiction. "Substitutionary narration," the interaction between authorial and figural modes of discourse, permits simultaneous speech by narrator and character. The dual vision that results becomes an ideal means of expressing the quasiverbal nature of thought and psychic life. This narrative method, also known as 'erlebte Rede', may thus be seen as a literary parallel to the selective yet complex functioning of human consciousness.

HERNADI, Paul. Literary Theory: A Compass For Critics. *Critical Inquiry* 3,369-386 Wint 76.

Various critical approaches to the literary work seen as a vehicle of both communication and representation are graphically correlated in a series of four "maps." Speech act analysis can help to extend the rhetorical axis of communication from the world as source of motivation through author, the work, and the reader to the world as field of action. A fourfold framework, based on Plato's Seventh Epistle, of naming, signifying, evoking, and designating (or designing) articulates the mimetic axis from the world as a reservoir of signs through the work to the world as representable by signs.

HERNADI, Paul. The Actor's Face As The Author's Mask: On The Paradox Of Brechtian Staging. *Yearbook Of Comp Crit* 7 1976.

A historical framework is used to examine the theoretical problem of the actor's impact on the spectators. While Horace believed that the actor's empathy for the character portrayed would result in his moving the audience, Diderot proposed that the actor's emotional distance from the character is required for a reliably moving performance. Brecht's demand that neither the actor nor the spectator identify with the character seems to go beyond Diderot in sophistication. Yet it reverts to the basic idea of Horace in assuming that the actor's actual attitude toward the character will be duplicated by the spectator whether it is an attitude of empathy or distance.

HERTZ, Richard. Chance And Symbol, A Study In Aesthetic And Ethical Consistency. Chicago Univ Of Chicago Pr 1948.

Chapter one, "The Tender Past," describes some of the eras, notably the Baroque, in which there yet existed an "ideal-space" above the "action-space" which is the arena of political and economic struggle and in which the force of numbers is likely to overwhelm mere good manners such as characterized the enlightened of the Enlightenment. Chapter two, "The Tough Present" describes the situation as a world of chance most easily expressed by statistics among which Value seems an interloper. In the last chapter, "The Metaphorical Future," the esthetic element of "ideal-space" is found in the work of the impressionists and other modern artists who have refused to bow to the adding-machine.

HESCHEL, Abraham J. God In Search Of Man: A Philosophy Of Judaism. NY 1955.

This book continues the discussion of the themes of the author's *Man Is Not Alone*, in which Heschel developed his philosophy of religion, amplifying them with particular reference to Judaism. He considers his approach philosophical because it begins with problems rather than dogmas. His method is non-analytic; it does not treat concepts, but attempts to consider the situation of man existentially. The result is an essay in the rediscovery of the basic spiritual values of Judaism and their reformulation by a thinker not unaware of the currents of twentieth-century philosophy and theology.

HESCHEL, Abraham J. Who Is Man? Stanford CA Stanford Univ Pr 1965.

The author floods the reader with a fountain flow of poetic insights about the nature of man. Included in the spray of insights are these: Man is a being who not only behaves but also reflects about how he behaves; whose possibilities are superior to the actuality of his being; "whose outstanding quality is in his being a surprise"; who intends, decides, and challenges, instead of merely going on, reacting, and being an effect; who characteristically faces the question "After satisfaction, what?"; who is "in search of significant being"; whose existence has, as its true meaning, "giving.... meeting a person face to face"; whose role is "to be involved.... to wonder and to respond.... to play a part in a cosmic drama.... to be at the crossroads"; who seeks an "ultimate relationship," fearful lest he be "alone in the wilderness of time"; who asks, "What is required of me?"; whose meaning is found in sensing a demand and responding to it; whose existence involves not only utilization and satisfaction, but also celebration and exaltation....

HESCHEL, Abraham Joshua. Man Is Not Alone; A Philosophy Of Religion. NY 1951.

A Jewish religious leader here provides a philosophy of religion. The first part of the book treats of the problem of knowing God. The second part of the book discusses man's needs and the satisfactions to be derived through religious faith. The analysis of human experience and personality and the discovery through this of what the author terms a "sense of the ineffable" provide the foundation stones for the theistic position here presented.
